Monitoring Reports – CDO Gateway 73

Site Monitoring Application

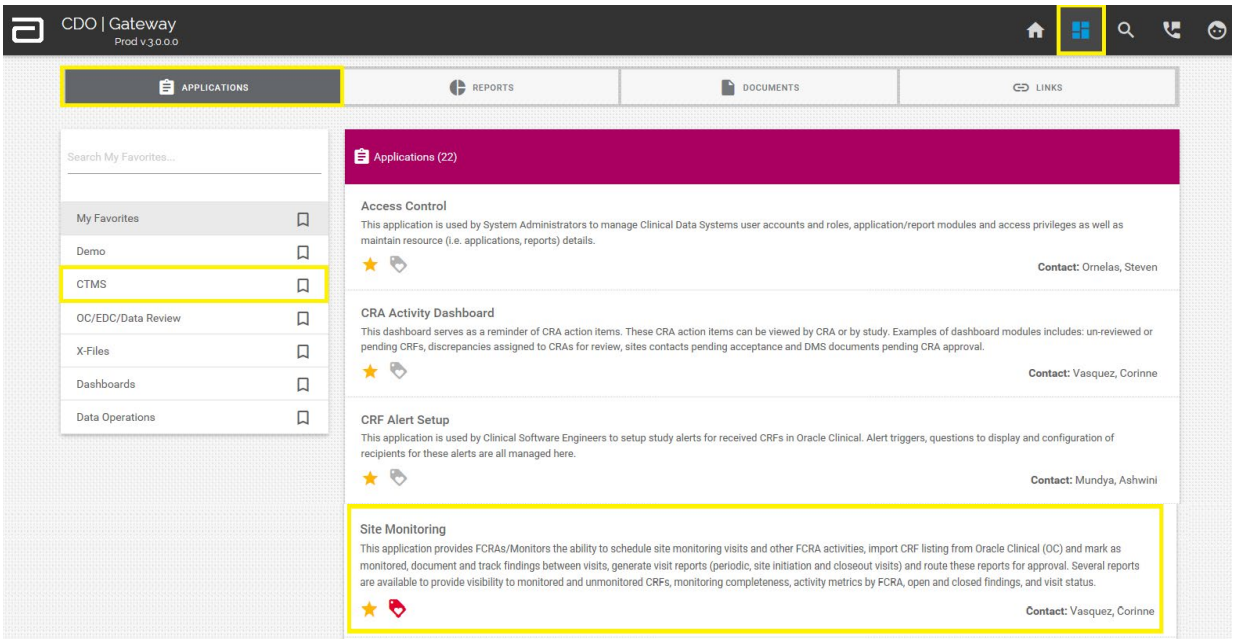

The Site Monitoring Application (SMA) is the primary tool for the Field Monitors to enter in monitoring visit dates and monitoring reports. The application can be accessed through the CDO Gateway Application resources. This section will review how to schedule monitoring visits and generate monitoring reports.

Scheduling Monitoring Reports

The scheduling module is the first step to preparing for a monitoring visit. Activities such as monitoring visits (site initiation, periodic and closeout), compliance related visits, and site qualification visits can be added to the schedule. With regards to monitoring visits, the visit must first be added to the schedule to enter monitoring data used for creating the trip report within the monitoring application.

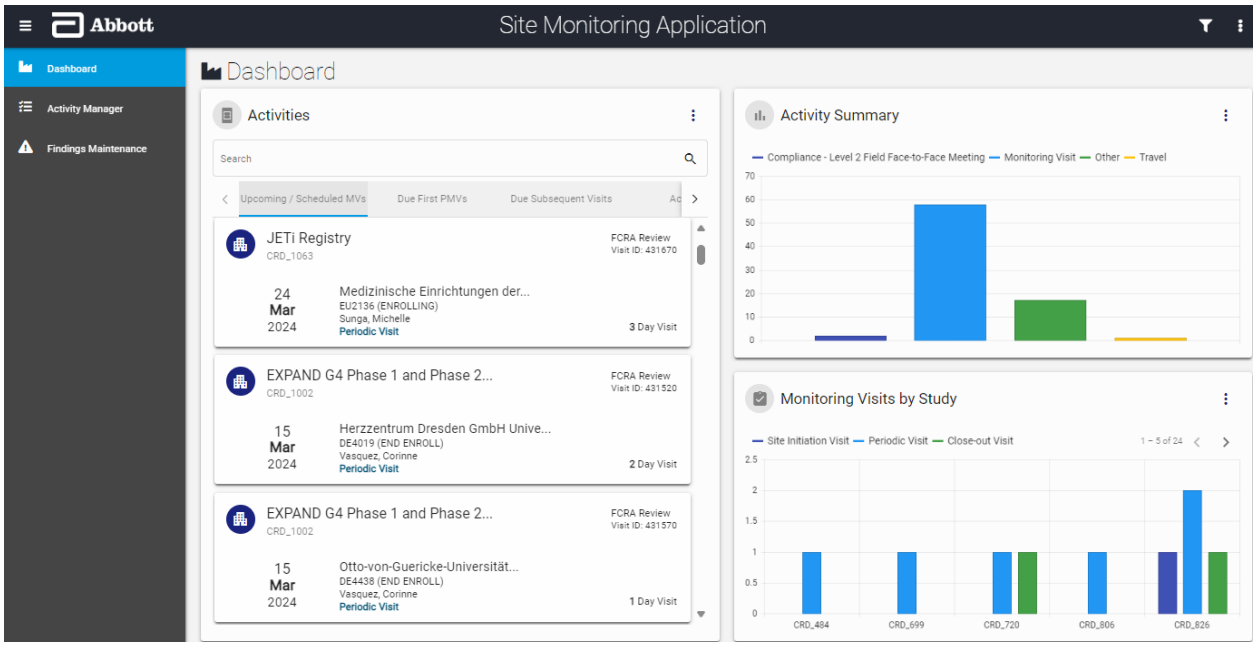

Access

Start the application by clicking on the URL https://cds.abbott.com and log in to the CDO Gateway. Go to Application Resources page, menu option CTMS, Site Monitoring. Select the Site Monitoring application from the list of applications that appears.

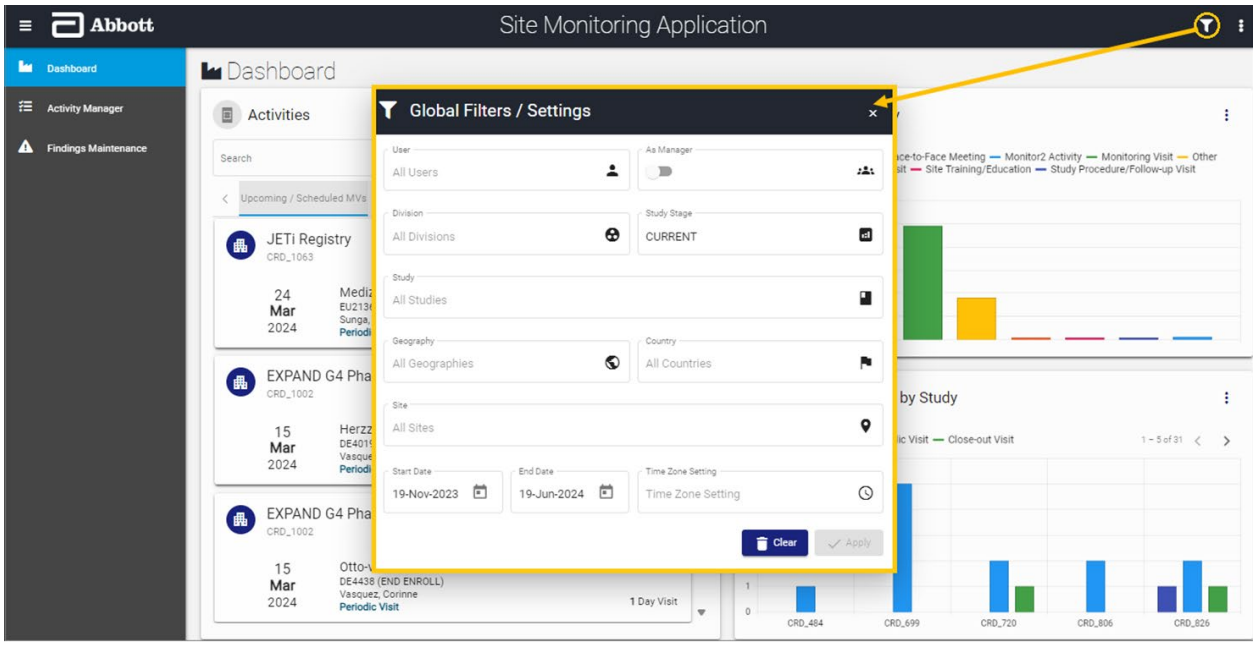

Site Monitoring Dashboard Screen

Upon launching Site Monitoring, the first screen that will display is the SMA Dashboard.

Global Filters / Settings

Locate the filters symbol within the top toolbar to access the Global Filters / Settings window. Any filters or settings applied within this screen will drive all data that is seen in each of the panels held within the Dashboard.

The following filters can be set to drive the data shown in the Dashboard:

- **User** – Name of the Field Monitor and will display data based upon their study/site assignments and their associated activities / visits in SMA.
- **As Manager** – When toggled, if the user selected has direct reports, all data displayed in the dashboard will show for all of their direct reports.
- **Division** – Select to display only data for a certain division (defaults to display data for all divisions).
- **Study Stage** – Defaults to display only 'Current' studies. Select to see either 'Current' active studies, 'Complete' closed studies or both.
- **Study** – Select to display data for a single study or select multiple studies (defaults to display data for all studies).
- **Geography** – Select to display data for a single geography or multiple geographies (defaults to display data for all geographies).
- **Country** – Select to display data for a single country or multiple countries (defaults to display data for all countries).
- **Site** – Select to display data for a single site or multiple sites associated with the study selected (defaults to display data for all sites associated with the study/studies selected).
- **Start Date** – Select the start date for the range of data that displays in the dashboard (defaults to 4 months prior to today's date).
- **End Date** – Select the end date for the range of data that displays in the dashboard (defaults to 2 months after today's date).
- **Time Zone*** – Select the time zone that should be populated when scheduling a new activity. This will default as blank until a time zone is selected and then will continue to show that time zone unless updated by the user.

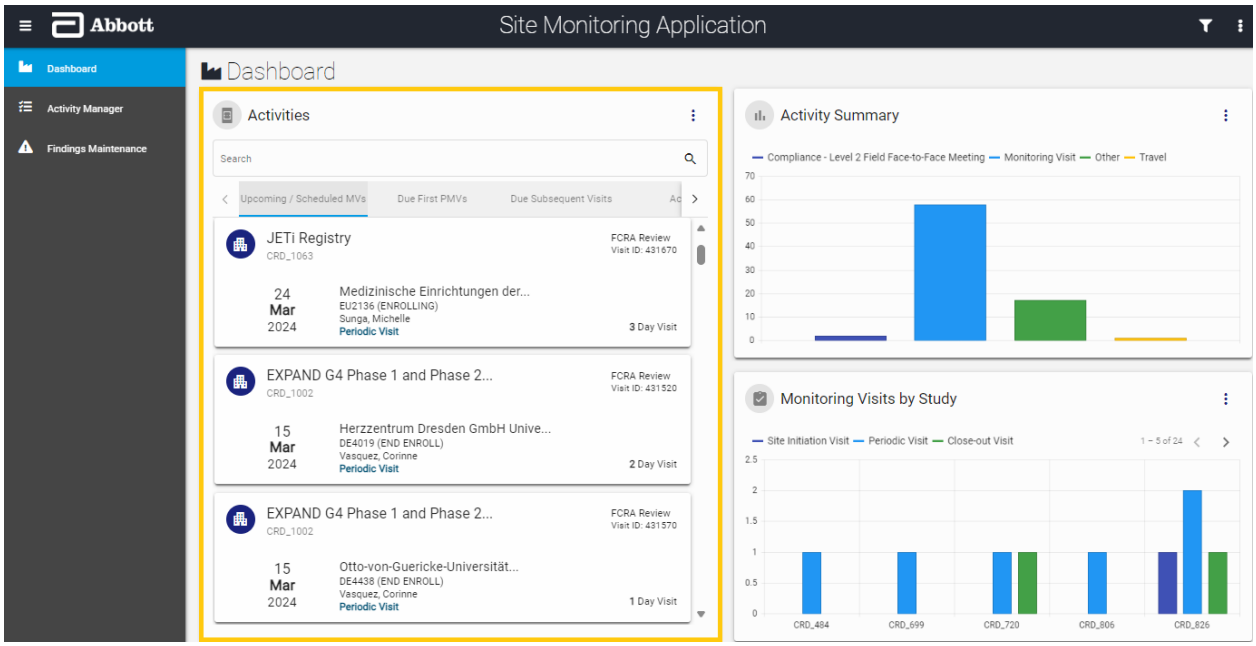

***The Time Zone field is meant to be a setting that will persist when scheduling a new activity. Therefore, the time zone that is entered within this Global Setting will automatically populate as the time zone when scheduling an activity.

Press the "Apply" button to confirm the filters and/or settings selected before closing the page.

Press the "Clear" button to clear out any filters that were selected. The Time Zone Setting will not be cleared when this is pressed.

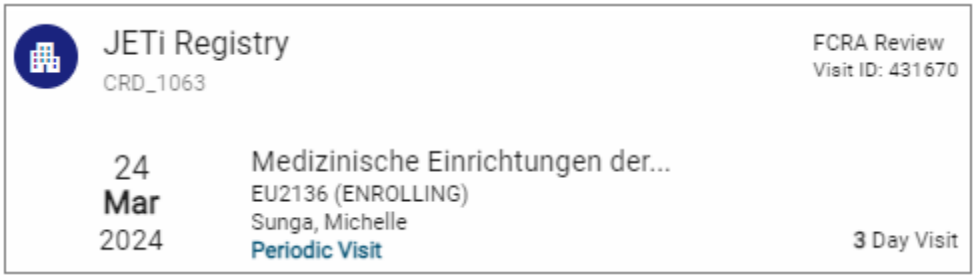

Activities Panel

The Activities Panel within the Dashboard will provide an at-a-glance and actionable listing of pertinent monitoring visits and activities that either have been scheduled or still need to be scheduled based upon some compliance guidelines.

The Activities Panel has several tabs that provide different listings of data based upon the selected Global Filters / Settings. Within each of the given tabs a list will be provided of applicable data based upon the tab selected. By clicking one of the cards with data listed, a set of actionable options will display and be applicable based upon which options can occur within that tab for that item.

Each visit captures below information.

For Field Monitors that are non-managers the option to create, copy, edit and delete is available for their own activities and/or visits and cannot be done on behalf of another Field Monitor. However, the ability to view their own and other Field Monitors activities and/or visits will be available.

*For managers with managerial rights to the application, the option to view, create, copy, edit, revert, and delete can be done on behalf of other Field Monitors as well as their own activities and/or visits.

View = Ability to view all data listings for any user.

Create = Ability to create a new activity and/or visit that has not yet been scheduled. Field Monitors can only create activities and/or visits for their own activities. *Managers can create activities and/or visits on the behalf of any Field Monitor as well as their own.

Copy = Ability to copy the details from an existing scheduled activity and/or visit into a new activity or visit.

Edit = Ability to update an existing activity and/or visit that has already been scheduled and needs to be changed. Will only be applicable for certain monitoring visits that are at applicable statuses, if a monitoring visit is at Manager Review, Manager Approved or Sent to Site the edit option may not be available.

*Revert *(Managers Only)* = Ability to revert the status of an existing scheduled monitoring visit from Manager Review, Manager Approved or Sent to Site back to FCRA Review status.

Delete = Ability to delete or cancel an existing activity and/or visit.

The following tabs are available:

- **Upcoming / Scheduled MVs** – Provides a listing of those Monitoring Visit activities (Site Initiation, Periodic and Close-out) that are upcoming and have already been scheduled.
- **Due First PMVs** – Provides a listing of those compliance required 1st PMV visits that have not yet been scheduled that are coming up due based upon the set Monitoring Trigger Date for the study/site.

  **Note: The Monitoring Trigger Date resides in the PTM Application and is mapped to the appropriate field based upon the Monitoring Plan for the study.*
- **Due Subsequent Visits** – Provides a listing of those compliance required Subsequent Periodic Visits (i.e. Annual Visits) that have not yet been scheduled and are coming up due based upon the Monitoring Trigger Date.

  **Note: The monitoring trigger date for Subsequent PMVs is based upon the Last Day of the Last Scheduled PMV. The Days Elapsed is calculated based upon the number of days from the Monitoring Trigger to the Current Date.*
- **Activities** – Provides a listing of those non-monitoring visit activities that are upcoming and have already been scheduled.
- **Closed MVs** – Provides a listing of monitoring visits (Site Initiation, Periodic, Close-out) that have been put to closed status (i.e. Sent to Site; Closed – PI Signed Copy Received In House).

Activity Summary Panel

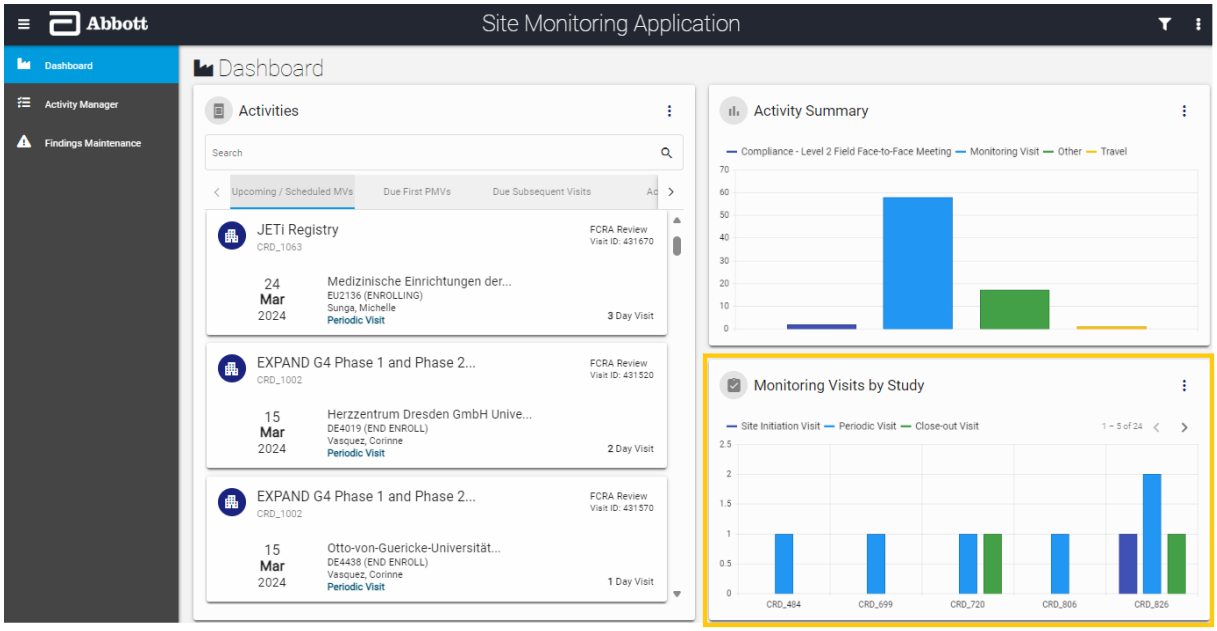

The Activity Summary Panel within the Dashboard will provide a graphical representation of all Scheduled Activities, both Monitoring and non-monitoring visit activities, and will be based upon the Global Filters / Settings selected. A hover-over ability is available to see the activity and total number scheduled for each bar graph.

*Note: Run the SMA Scheduled Activities Report for an excel output of this data.

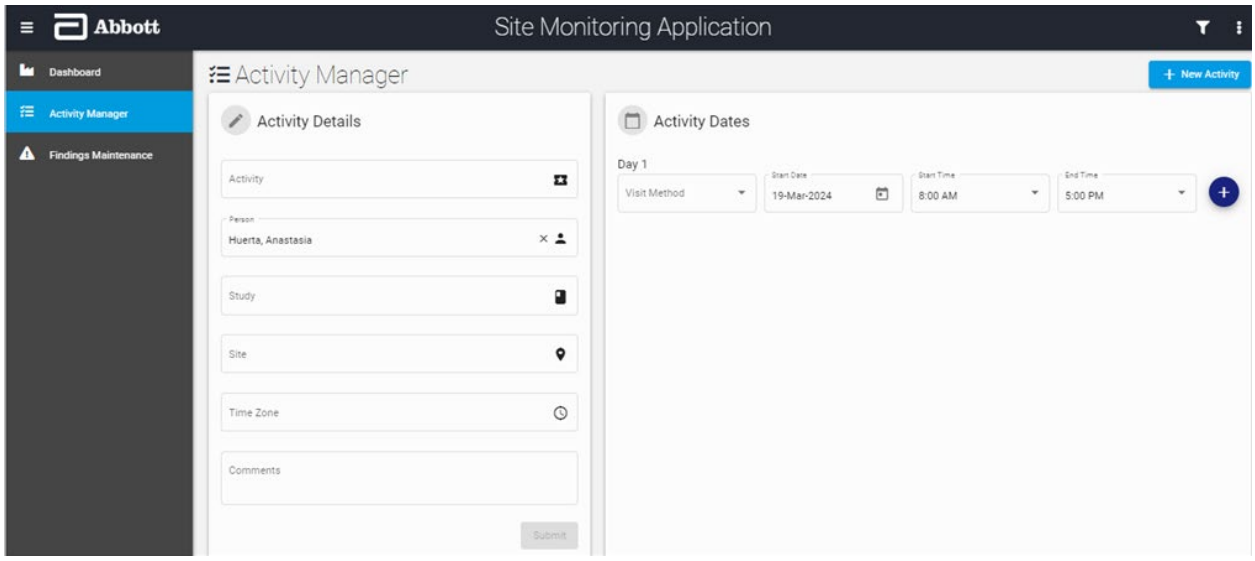

Monitoring Visits by Study Panel

The Monitoring Visits by Study Panel within the Dashboard will provide a graphical representation of all Monitoring Visit activities (Site Initiation, Periodic, Close-out) broken down by study, and will be based upon the Global Filters / Settings selected. A hover-over ability is available to see the total number scheduled for each bar graph. *Note: Run the SMA Scheduled Activities Report for an excel output of this data.

Activity Manager – Scheduling an Activity/Monitoring Visit

The Activity Manager is where the Field Monitor can schedule a new activity and/or visit. This can be accessed by navigating to the specific Activity Manager Menu option or it can be launched by clicking an item within the Activities tabs of the Dashboard for creating, copying, or updating a visit. Upon switching to the Activity Manager View the Activity Details and Activity Dates panels will display allowing the Field Monitor to enter the required details for the activity and/or visit that is being scheduled.

The following fields and functionality are represented within the Activity Details and Activity Dates screen:

- **Activity** – List of compliance driving activities, Monitoring Visit activities and other relevant field monitor activities can be scheduled. Depending on the activity selected other filter options may be required.
- **Visit Type** - Only Applicable when Monitoring Visit Activity is selected. Lists the type of monitoring visit that is being scheduled (i.e. Site Initiation, Periodic, Close-out).
- **Primary Monitor** – Automatically will populate with the name of the field monitor that is logged into the application and provides the ability to select other Primary Monitors as applicable. *Remember: Only users with managerial rights can schedule on behalf of another field monitor.
- **Secondary Monitor** – Select the name of the Secondary Monitor that is attending the monitoring visit and/or activity if applicable. This can be left blank and is not a mandatory field.
- **Study** – Select the study that the activity and/or visit is being scheduled for. This is mandatory for Monitoring Visit Activities.
- **Site** – Select the site that the activity and/or visit is being scheduled for. This is mandatory for Monitoring Visit Activities.
- **Site Contact** – Only applicable when Monitoring Visit Activity is selected. Select the primary site contact that will be conducting the monitoring visit.
- **RBM Assessment Date** – This field will be disabled if there is no associated RBM Assessment for the selected study and site. Select the date of the RBM Assessment that occurred where the site was selected for monitoring to occur based upon the RBM Assessment. *Note: If a date is not selected the visit will not count towards the RBM Assessment and reminders will continue to be sent.
- **Time Zone** – This will automatically display with the Time Zone that is selected within the Global Filters / Settings. If no Time Zone is shown, select the appropriate time zone that this visit is being scheduled for.
- **Comments** – Input any comments needed related to the scheduled activity and/or visit. *Note: These comments will not display on any Monitoring Visit Report outputs.
- **Visit Method** – Select the Visit Method that this activity and/or visit is being conducted using (Phone Contact, On-Site, Remote).
- **Start Date** – This will automatically display today's date. Click to select a different Start Date for the activity and/or visit.
- **Start Time** – This will automatically display 8:00 AM. Click to select a different Start Time for the activity and/or visit (allows 15 minutes intervals).
- **End Time** – This will automatically display 5:00 PM. Click to select a different End Time for the activity and/or visit (allows 15 minutes intervals).

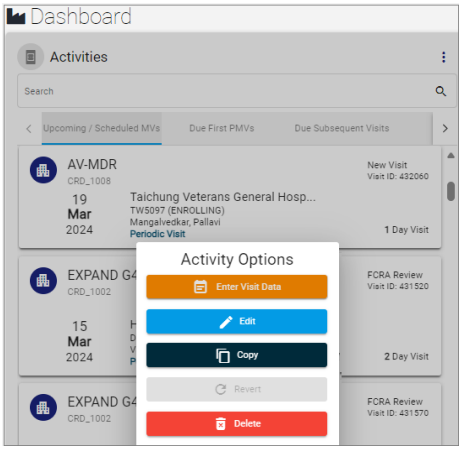

- **Plus Sign** – Click the plus sign next to the End time to add the next day to your activity and/or visit for multiple day activities.

  Click the Submit button once all details are entered to schedule the activity and/or visit.

  Once submitted you can click the "+ New Activity' button at the top righthand corner of the screen to start over with your selections.

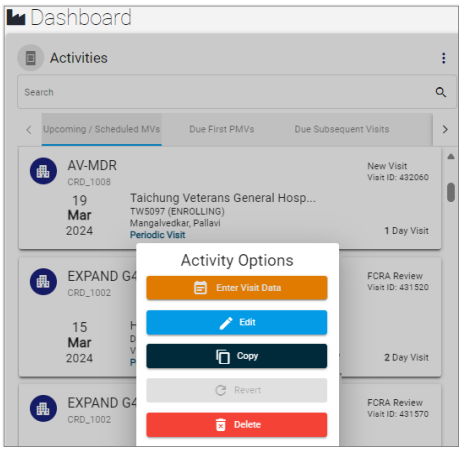

Deleting an Activity/Monitoring Visit

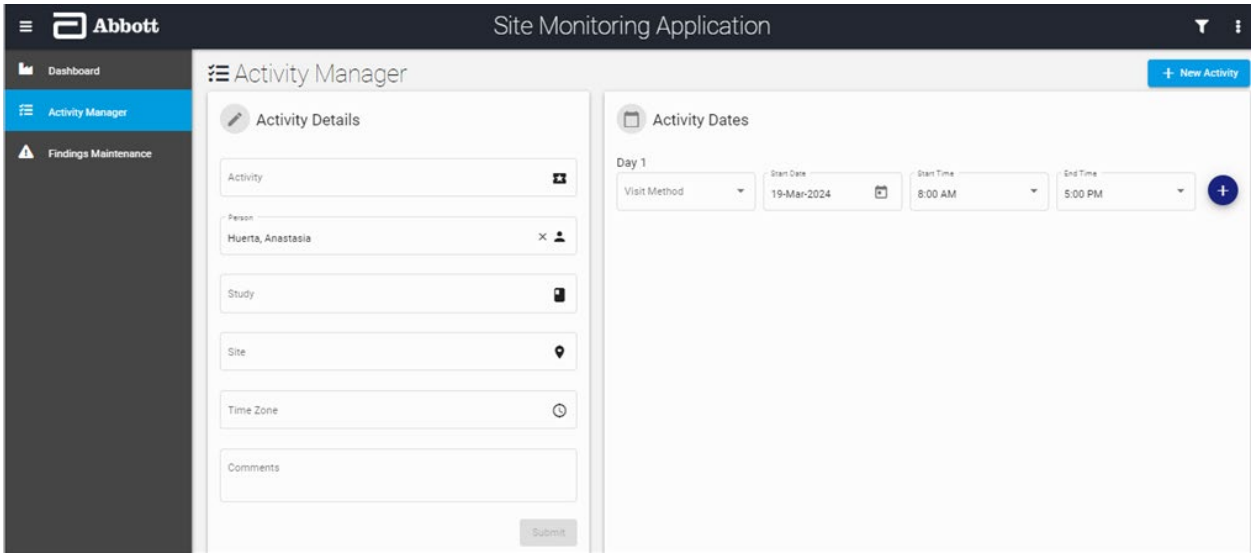

Go to the **Dashboard** for **Upcoming / Scheduled MVs** to locate a Monitoring Visit or navigate to the **Activities** tab for non-Monitoring Visit activities. You can use the Search to start typing a study, site, visit detail for easily locating what you are looking for. Click on the visit and select the 'Delete' option.

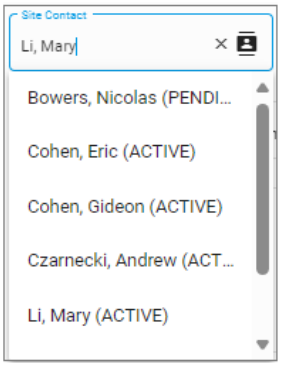

Editing an Activity/Monitoring Visit

Go to the **Dashboard** for **Upcoming / Scheduled MVs** to locate a Monitoring Visit or navigate to the **Activities** tab for non-Monitoring Visit activities. You can use the Search to start typing a study, site, visit detail for easily locating what you are looking for. Click on the visit and select the 'Edit' option. This will take you to the Activity Manager Screen with the details entered for the visit that can be edited. Press 'Update' button once edits are complete to make the changes indicated to the activity and/or visit.

Site Contact includes Site Contact Name & Active & Pending statuses as applicable.

Recognizing Smart SDV vs. Legacy SMA Studies

There are two different types of monitored studies indicated within the SMA. It is very important to recognize the type of study based upon the monitoring plan to understand how SMA will behave during the monitoring visit. Please review the monitoring plan in detail to determine if a study will be utilizing the Smart SDV technology or if it will be using the Legacy SMA process. If the monitoring plan is not clear, please consult your manager for assistance.

Smart SDV Studies

- SMA will utilize the Smart SDV Bot (i.e. Short for Robot) to prescribe the patient data that will need to be reviewed by the monitor for a selected subset.
- The Smart SDV Bot will determine the listing of patients Informed Consent Forms (ICF) Review, Source Document Review (SDR) and Source Data Verification (SDV) required based upon a mathematical and statistical algorithm using a combination of expected thresholds, percentages and indications of CRF critical variables ensuring the optimum threshold of patients is being met to mitigate risk.
- When utilizing the Smart SDV process there could potentially be escalations that occur where the Smart SDV Bot will determine if additional ICF, SDR or SDV is required based upon the findings being entered for the initially selected subset.

**Important Note: All initially selected, PMV selected, escalated and PMV escalated (as applicable) patients will be required to be monitored and all findings entered prior to leaving the site monitoring visit.

**For Source Data Verification (SDV), all initially selected patients and at least one escalated (if applicable) is required to be monitored prior to leaving the site monitoring visit. Deferring additional escalated patients to the next scheduled monitoring visit is available during this activity.

Legacy (Non-Smart SDV) Studies

- The SMA will not utilize the Smart SDV Bot to prescribe data. The Field Monitor will be required to mark and/or add the patient/data that was monitored within each ICF Review, SDR and SDV activity.

**Important Note – SDV activity will automatically list all CRFs required for monitoring using the same techniques that were used previously.

- No concept of Selected/Escalated patient data since the Smart SDV process will not be utilized.

Preparing for a Scheduled Periodic Monitoring Visit

The Prepare steps of the SMA are for periodic monitoring visits only. The SMA will automatically start preparing for the monitoring visit 7 days prior to the first scheduled monitoring visit date (minus the actual visit days). The Field Monitor will no longer be able to manually prepare using the import link through the "Enter Monitoring Visit Data" module. This prepare section has been permanently removed. The automatic prepare package within the SMA will start importing into the visit a list of applicable and required patient data that needs to be monitored as well as transfer all applicable findings from a previous periodic monitoring visits into the current visit.

**Important Note – The excel worksheet will no longer be accessible and has been permanently removed.

The automatic SMA Prepare Package will work as follows:

- **Smart SDV Studies** – Automatically brings in all prescribed ICF, SDR and SDV selected patient data required for monitoring 7 days prior to the first scheduled monitoring visit date (minus the actual visit days) as well as transfers all applicable findings from a previous periodic monitoring visits into the current visit.
- **Legacy SMA Studies (Non-Smart SDV)** - Automatically brings all ICF, SDR and SDV CRFs required for monitoring 7 days prior to the first scheduled monitoring visit date (minus the actual visit days) as well as transfers all applicable findings from a previous periodic monitoring visits into the current visit.

Access

Start the application by clicking on the URL https://cds.abbott.com and log into the Site Monitoring Application.

Access Permissions

Field Monitors will have access to every site and study in preparing for a monitoring visit if the visit has already been scheduled by the Field Monitor indicated as the user in their own SMA schedule.

The in-house project teams will have access to view everyone's reports.

The next step is to wait for the automatic preparation step to run 7 days prior and up to your scheduled visit.

Once the automatic preparation step occurs successfully (7 days prior and up to the scheduled visit date) the visit status will be updated to "New Visit" and the "Go to Findings and Approval Area" button will be available to select. Depending on the type of study (i.e. Smart SDV or Legacy SMA) all appropriate activities will be populated with the required patient data to review for monitoring and all

applicable findings from previous periodic monitoring visits will be imported into the current visit.

**Important Note: If the preparation step has ran the Monitoring Visit Status will automatically change from "Scheduled" to "New Visit". You cannot move to the "Go to Findings and Approval Area" if the preparation has not started to run (this runs daily starting 7 days prior to the scheduled visit start date).

This completes the preparation for a periodic monitoring visit.

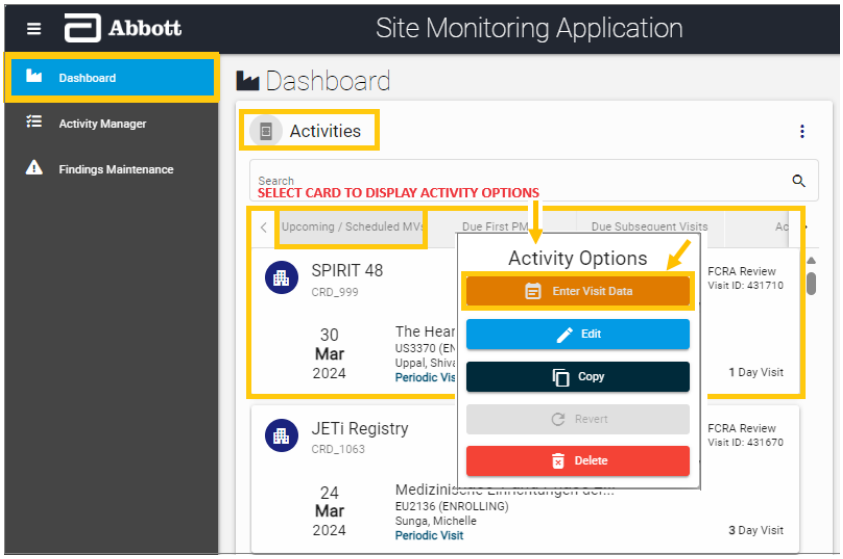

Entering Periodic Visit Data

Enter Visit Data is the primary data-entry module for the application. Regardless of the type of internet access at the site this area of the Monitoring Application will remain rather quick without issues. Entering findings and data directly into the database through this area is the only option for all monitoring visits regardless of your connection.

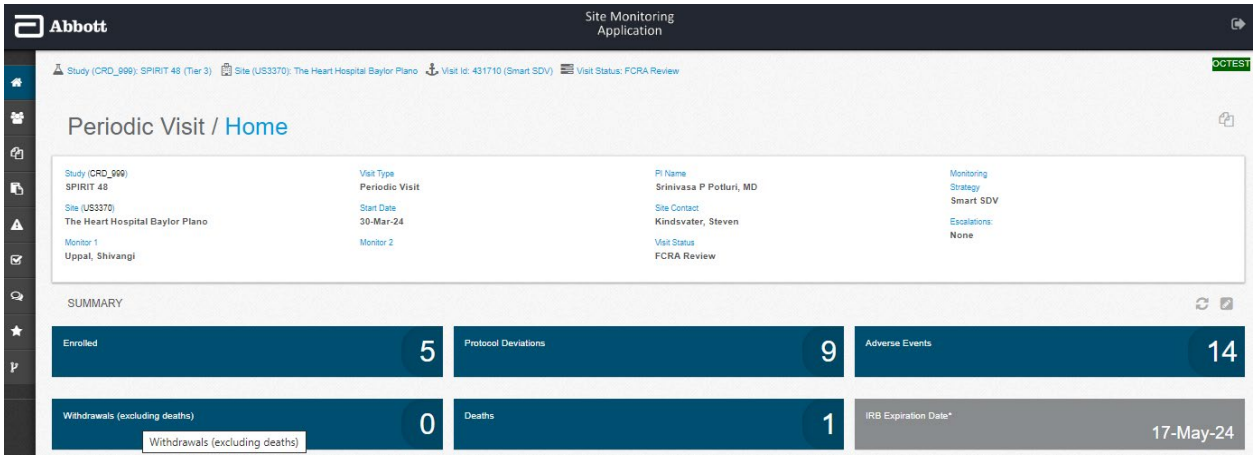

Access

Start the application by clicking on the URL https://cds.abbott.com and log in to the Site Monitoring Application.

To Enter Visit Data, select the Upcoming / Scheduled MVs tab in the Activities Panel within the Dashboard. Select the Upcoming/Scheduled MV visit to enable the Activity Options screen.

Click on the Enter Visit Data to launch the Periodic Visit / Home screen to enter data.

Access Permissions

The Field Monitors, in-house clinical study teams and management will have access to every site and study in preparing for a monitoring visit as long as the visit has already been scheduled AND prepared for in the SMA.

The principal investigator and their status will automatically populate along with their status based on what is assigned for the study/site in Study Organizer. This is a non-updateable field within the monitoring application and will show multiple Principal Investigators if there is more than one assigned PI for a study/site.

The monitoring visit status will appear as "New Visit" as long as the automatic preparation step has run 7 days prior to the scheduled visit date.

**Important Note: The monitoring visit ID may be used as a source of reference should a technical problem related to the visit occur.

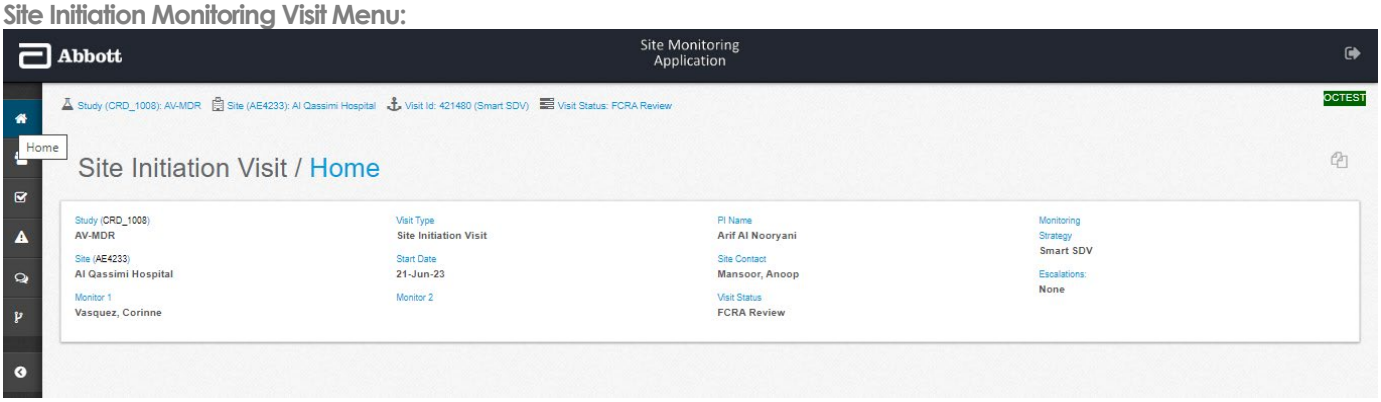

Now that the mandatory fields are complete, the site contact and Study Organizer contact status automatically populates.

**Important Note: There is a pull-down list for this field if any changes need to be made at this point.

Once the visit is located, upon selecting the 'Enter Visit Data' option the monitoring visit status changes from "New Visit" to "FCRA Review".

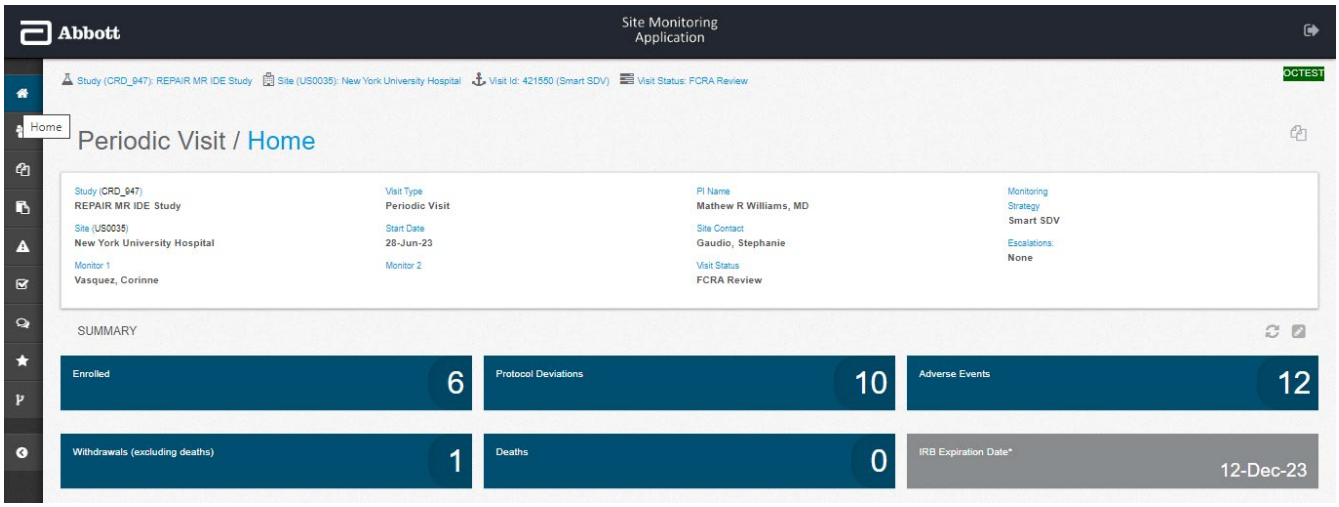

The Enter Visit Data Entry Screen

Site Initiation Monitoring Visit Menu:

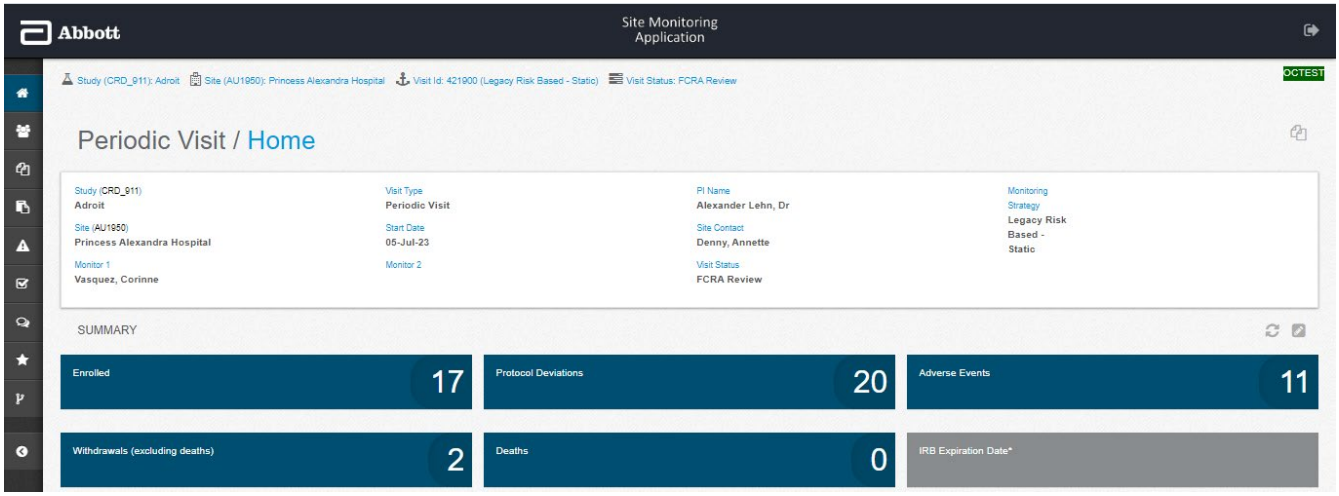

Periodic Monitoring Visit Menu:

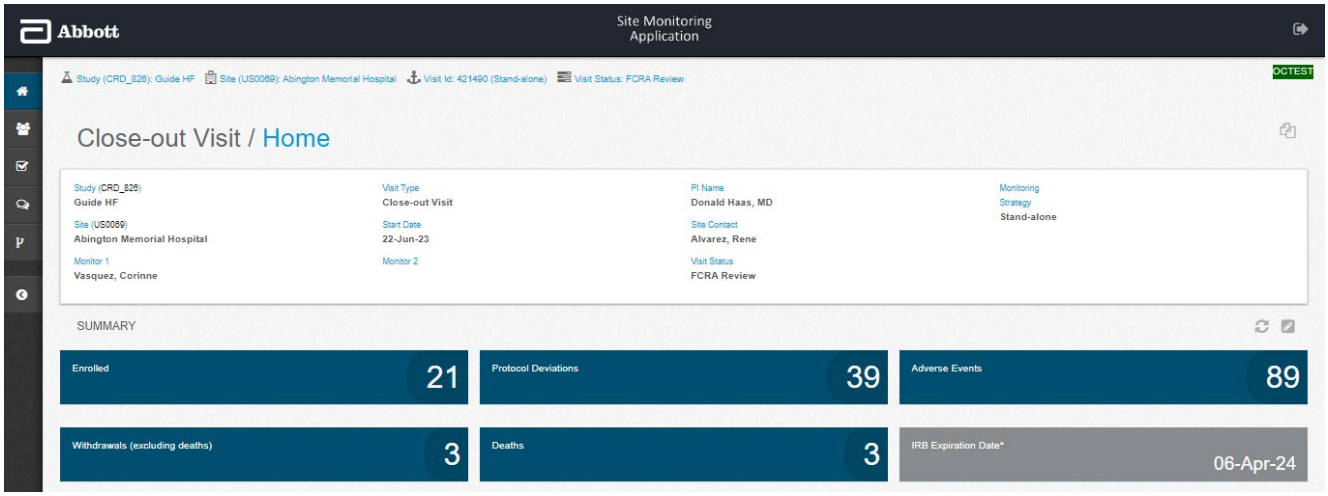

Smart SDV Studies View

Legacy SMA (Non-Smart SDV) Studies View

Close-out Monitoring Visit Menu:

About the Enter Visit Data Entry Screen

The top of the screen will contain the site visit details, which were specified and confirmed in the Monitoring Visit Preview screen, as fixed fields.

The different menu options to the left of the screen will show depending on the Monitoring Visit Type (i.e. Site Initiation, Periodic, and Close-out) that is selected.

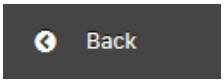

To enter data, click on each corresponding menu option to open it. There are certain sections (i.e. Checklist Items, Comments) that require you to save your changes prior to navigating away from that menu screen.

Applicable sections will default to no findings or forms unless monitoring visit findings are entered by clicking on the 'Add New Finding' button in that section.

At any time, the 'View Periodic Visit Report' option is available at the Home Menu through clicking the document icon  at the top of the screen which can be used to visualize the report as a PDF or Excel document.

The 'Approval' menu is used to see the history of the status of the report and link to the approval process screen by clicking on the "plus icon"  to set the report at different levels of review and process. This will be discussed further later on.

To go back to the Main Menu simply click the Back menu option on the left-hand side.

Overview of Entering Visit Data and Findings

Smart SDV Studies

Periodic Monitoring Visit ICF Review Activity

For Periodic Monitoring Visits only, upon accessing the "ICF Review" activity a prescribed list of patients ICFs will be automatically imported based upon the Smart SDV preparation package. The initial list of selected and PMV selected patients ICFs are required to be monitored. To start monitoring ICF click the pencil icon next to the patient.

*In the case of a Tier 1 or Tier 2 Smart SDV Study, 100% of ICFs will be pulled in as required for review.

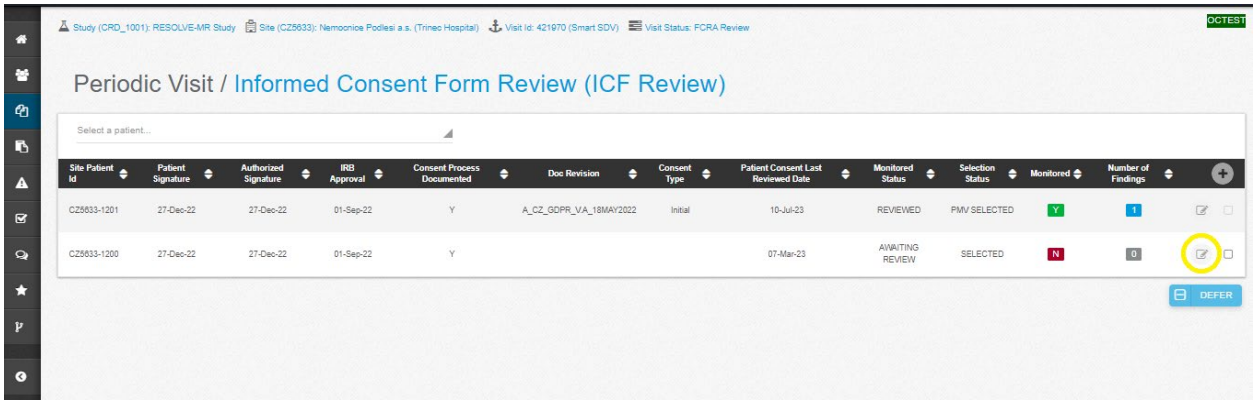

**Important Note: The Monitoring Status and the Monitored flag in the table will always come over initially as Awaiting Review which automatically shows Monitored = N.

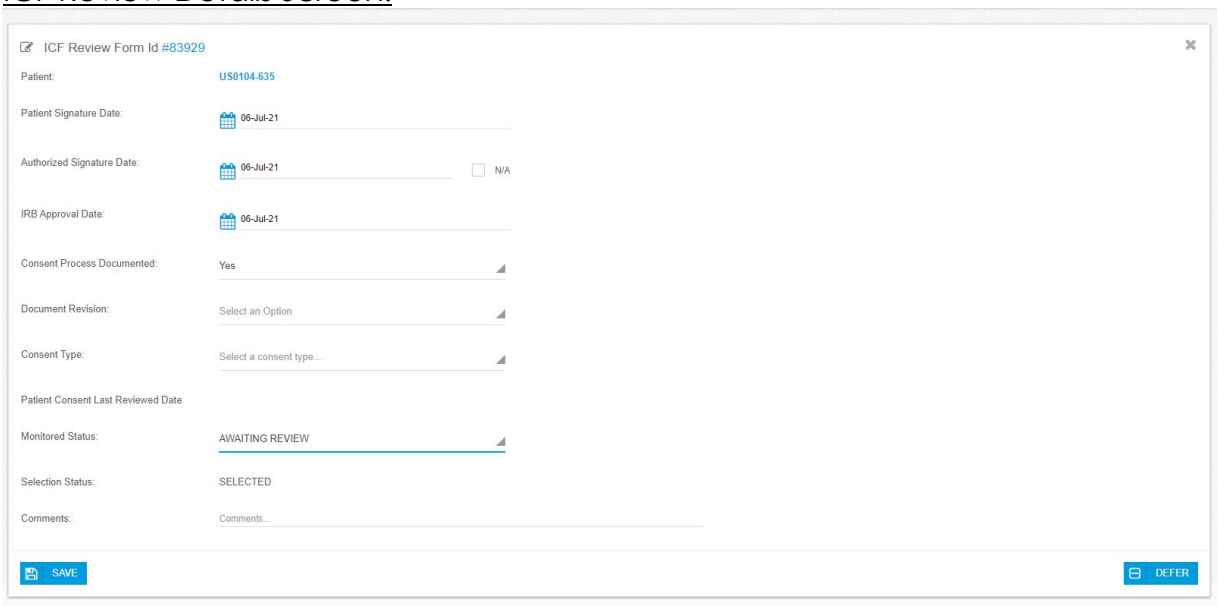

If there is a situation where the ICF for a one or more of the listed patients cannot be monitored during the visit, there is an option to defer monitoring for all unmonitored subjects ICF items or individually.
Click the "Defer" button to defer all unmonitored ICF subjects or click the "Edit" icon to defer individually.

Click the "Edit" icon to complete the ICF Review Details for the patient selected as well as to access the ability to individually defer if not yet marked as monitored.

ICF Review Details Screen:

Enter the required details based upon the review of the Informed Consent Form at the site.

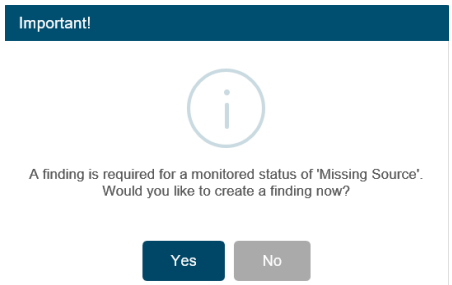

**Important Note: If this is a Reconsent you will be forced to enter comments prior to Save being enabled.

Once all the details are entered and the ICF has been reviewed select the appropriate "Monitored Status" from the dropdown list of selections (i.e. Reviewed, Missing Source, No Review Needed, Awaiting Review).

**Important Note: The "Monitored Status" selection will determine the Monitored Flag. If the status stays at "Awaiting Review" the Monitored Flag will remain at No and the visit cannot be completed until all Selected Patient ICF Review have been flagged as Monitored = Y.

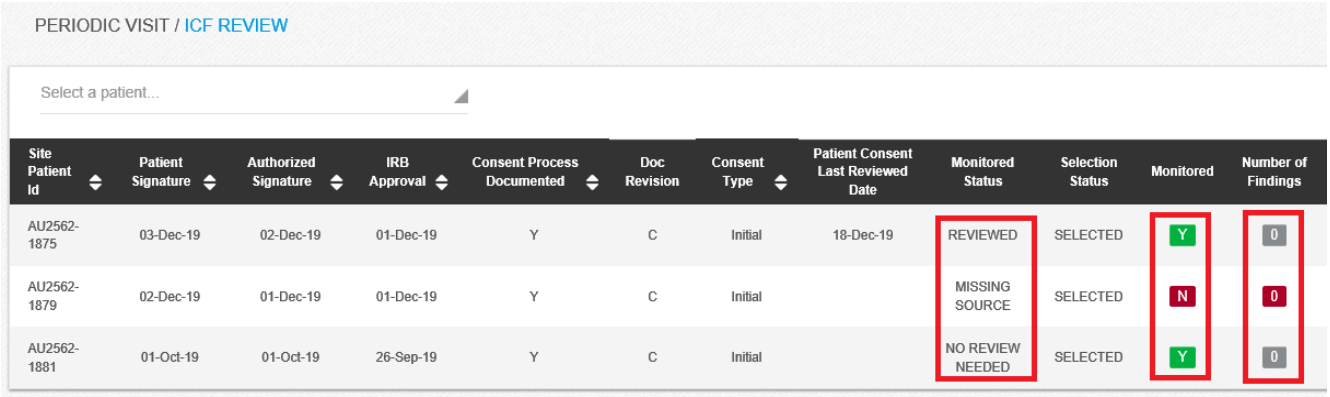

Monitored Statuses and Definitions:

- Awaiting Review – ICF Review has *not* been completed and is *not* considered monitored.
- Reviewed – ICF Review has been complete and is considered monitored.
- Missing Source – ICF review has been complete however there are missing source associated with this ICF review. SMA will automatically prompt user to create a finding associated with the Missing Source.

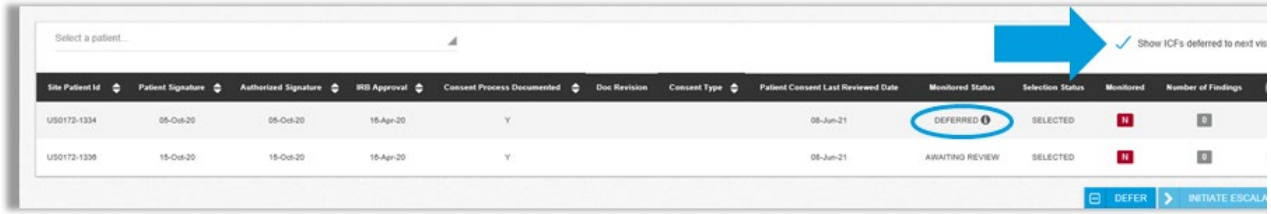

**Important Note: If no finding is created for a ICF with Missing Source as a monitored status the Monitored Flag will remain as Monitored = N.

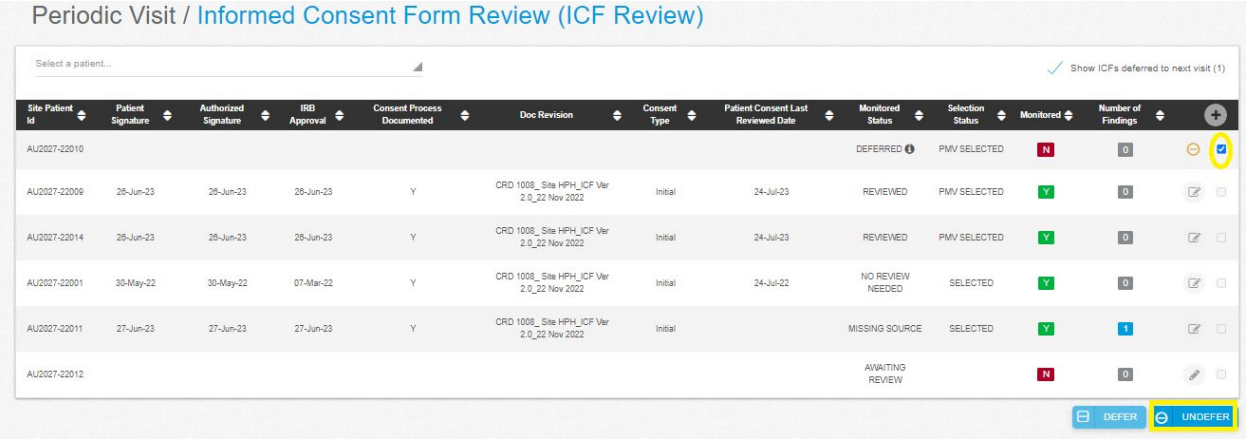

- No Review Needed – ICF Review was completed previously and there was no need to re-review or reconsent. ICF Review was completed and is considered monitored.

Once items are deferred, they will automatically disappear from the listing view. Click on the checkbox icon to show the "Deferred" items.

Once items are deferred, there will be an ability to un-defer by checking the box next to the deferred item and clicking the undefer button.

You should only focus on initially reviewing the listed SELECTED and PMV SELECTED patient ICF's.

**Important Note: Adding Manual ICF Patients in this screen is no longer an option. To add a Manual ICF for a patient, navigate to the Patient Review menu.

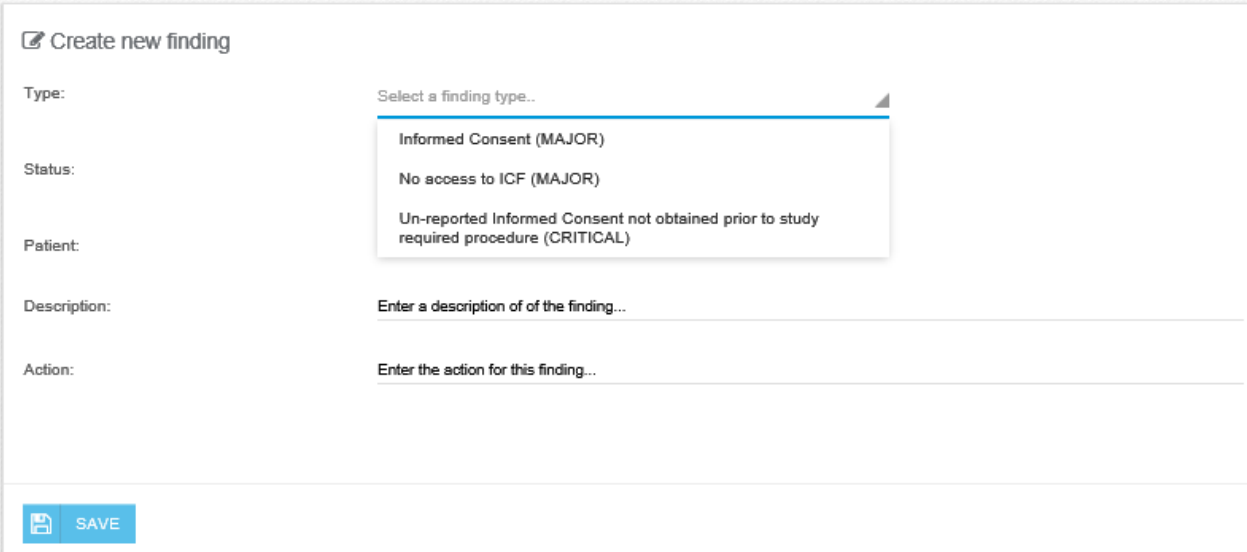

Periodic Monitoring Visit ICF Review Findings

All findings associated with the Selected and/or PMV Selected Patients ICF Review should be completed during the monitoring visit within that activity.

To create a finding for a patient's ICF, click on the number field within the column labeled "Number of Findings".

Upon selecting the "Number of Findings" another screen will display to create and enter the finding details. **Important Note: The finding Types displayed will be limited to only those that are associated with the ICF Review section.

Select the finding type associated with the ICF Review for that patient. Next to each finding type will be a finding category. These finding categories are pre-determined by the system. Depending on the Finding Category and the thresholds being met could determine that additional escalated patients will be required for review at this visit.

Based upon the number of findings created for the patients ICF Review, the "Number of Findings" column will display the number accordingly.

All actions that were taken within the ICF Review screen will automatically be displayed in the Patient Review Menu.

You will no longer be able to Initiate Escalations once you complete only the ICF Review. In order to Initiate Escalations all of the Selected and PMV Selected patients would need to be indicated as Monitored = Y or "Deferred" for ICF Review, SDR and SDV.

Smart SDV Studies

Patient Review Screen Overview

For Periodic Monitoring Visits only, upon accessing the Patient Review screen activity a prescribed list of selected and/or PMV Selected patients for ICF Review, Source Document Review (SDR) and Source Data Verification (SDV) will be automatically imported based upon the Smart SDV preparation package.

The Cards at the top of the screen will change as your PMV Data changes and will indicate if Escalations Risk is Low to Very High.

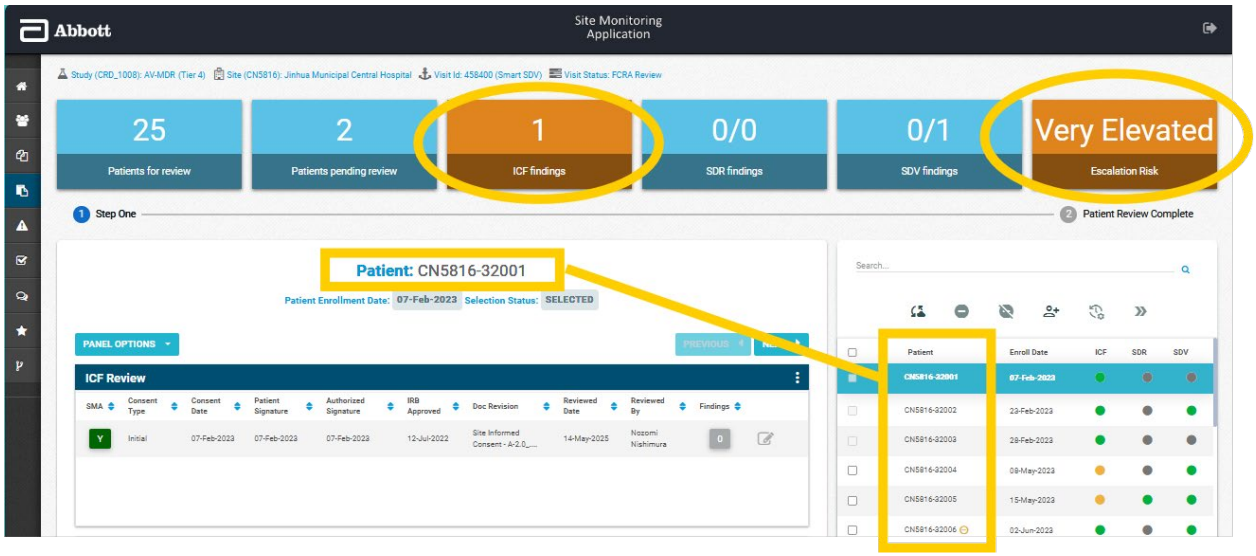

- Patients for review – Total Patients for Review
- Patients pending review – Patients pending ICF, SDR and/or SDV Review
- ICF findings –

  When the number of issues exceed the threshold, an escalation is possible. ICF sample size is the count of consents for review in this visit.
- SDR findings–

  The number after the slash is the count of findings from the prior visit plus those added on prior deferred SDR within this visit. The threshold after the slash is the threshold for prior deferred issues. When the number of issues exceed the related threshold, an escalation is possible. SDR sample size is the sum of scheduled critical variables received.
- SDV findings–

  The number after the slash is the count of findings from the prior visit plus those added on prior deferred SDV within this visit. The threshold after the slash is the threshold for prior deferred issues. When the number of issues exceed the related threshold, an escalation is possible. SDV sample size is the sum of scheduled critical variables received.
- Escalation Risk –

  As the visit data changes (e.g. findings entered) the escalation risk will indicate if the visit is close to escalating. The color of the boxes will change as well as the status within the box.

Navigation will occur patient-by-patient, through a patient selection pane on the right-hand side.

Patient Selection Pane

Color dots next to each patient reflect the status of the activity (ICF, SDR, SDV).

- Grey dot – Not Required
- Yellow Dot – Required, started, but not complete.
- Orange Dot – Required, not complete.
- Green Dot – Required, completed.

New Iconography with different actions will also display.

Refresh icon – Allows the user to refresh data with any current updates made within EDC or Oracle Clinical that need to be reflected in the current PMV.

Add Patient icon – Allows the user to add another patient that is not currently listed.

**Important Note: The activity dots will pull in based upon the data required for that patient.

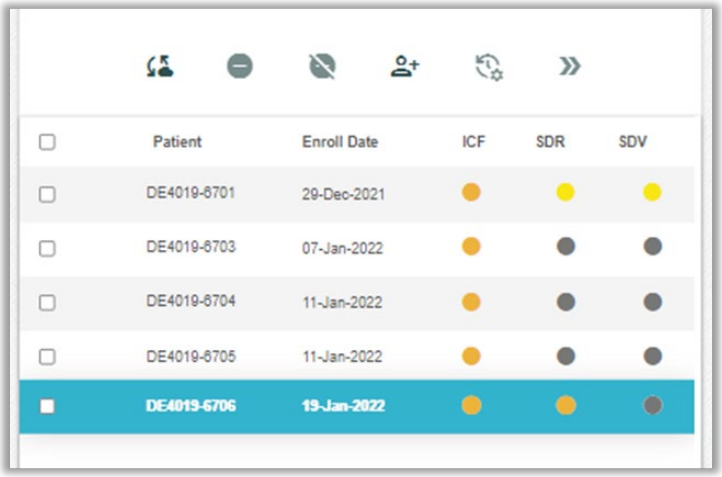

Restore to Prior State icon – Allows the user to put the visit back to its previous state.

**Important Note: If you are at a Level 2 Escalation, restoring to prior state would cause this to remove all the data entered for escalated subjects.

Initiate Escalations icon – Allows the user to initiate escalations and is only available once all yellow or orange dots are green. The icon will flash once it is enabled.

Defer icon – Allows the user to defer items that have not been completed. Check the box next to the patients that need to be deferred then click this button to defer.

Undefer icon – Allows the user to undefer items that have been deferred.

Panel Options

Options to view data from previous visits is available within the Panel options which allow you to view the following:

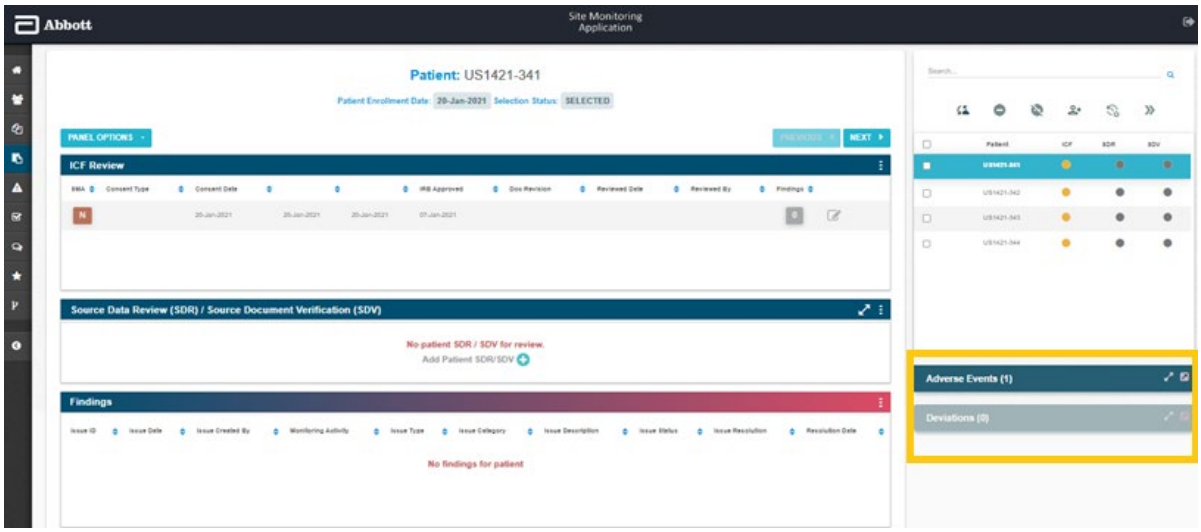

- Consents from Previous Visits
- Reviews from Prior PMVs
- CRF Findings
- Closed Findings

**Important Note: Data from the panel options will be view only and is not editable.

Adverse Events & Protocol Deviations

An option to view the Adverse Event and Protocol Deviation Details for each patient is available on the right-hand side of the screen.

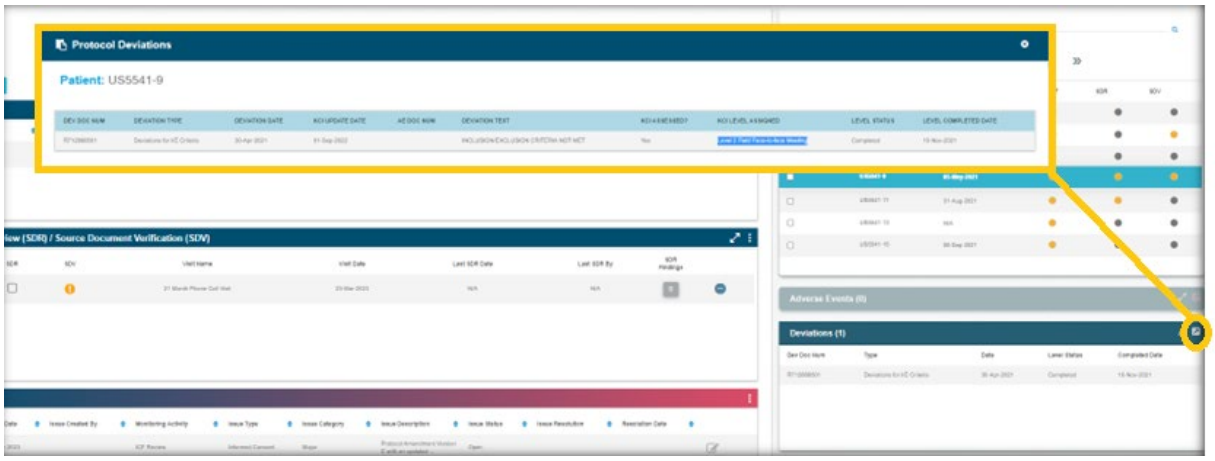

Expand to view the details by clicking the arrow options. **Important Note: This is just a view only to see the details of the AE and Protocol Deviations related to the patients that you are working on.

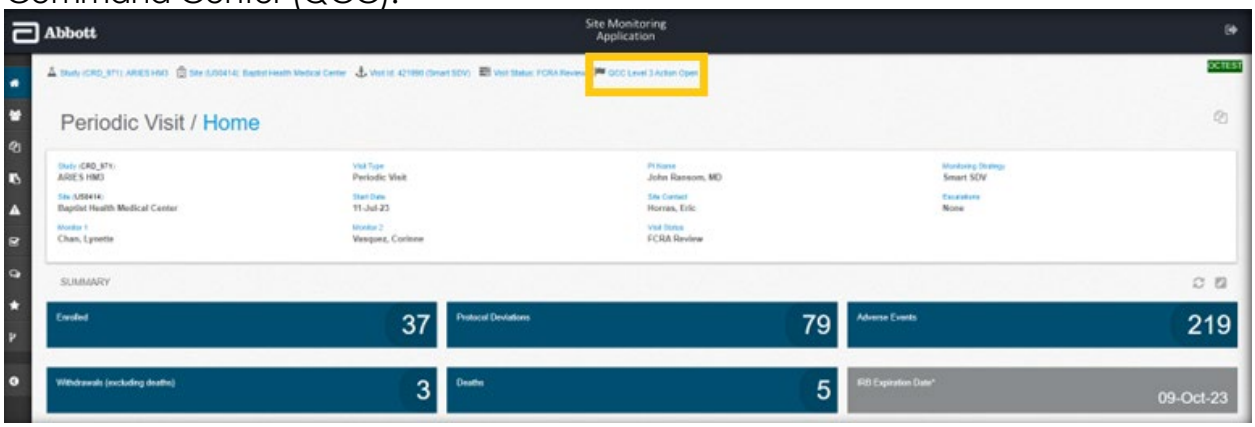

When the items within the AE Details display as red, this indicates that the Adverse Event has not been resolved.

Within the Protocol Deviation Details there will be additional indicators on the KCI related information.

QCC Level 3 Action Open

Dynamic verbiage will display if there is an open Level 3 Action in the Quality Command Center (QCC).

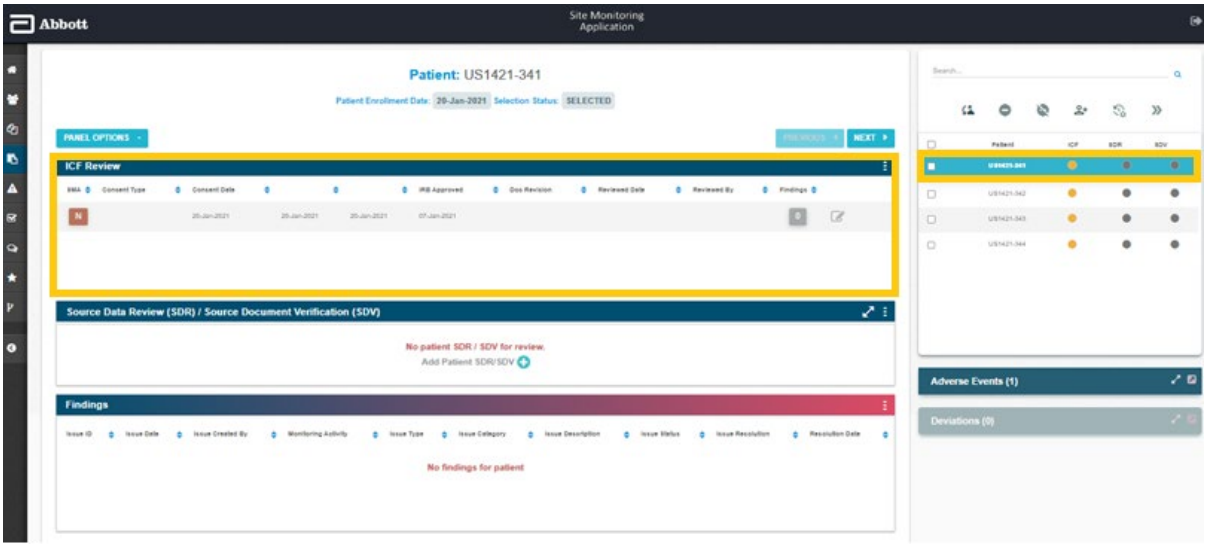

ICF Review - Patient Review Screen

Within the Patient Review Menu, users can now review each patient's ICF in this view as well. Any edits to ICF data made within the separate ICF Review Menu will dynamically be integrated into the ICF Review section held within the Patient Review screen and vice versa.

If additional ICFs need to be added to the existing list for a patient, click the ellipsis.

For example, if the Initial ICF is being reviewed during this visit and the same patient also had a re-consent that needs to be reviewed, add the reconsent so you will see both listed for this patient.

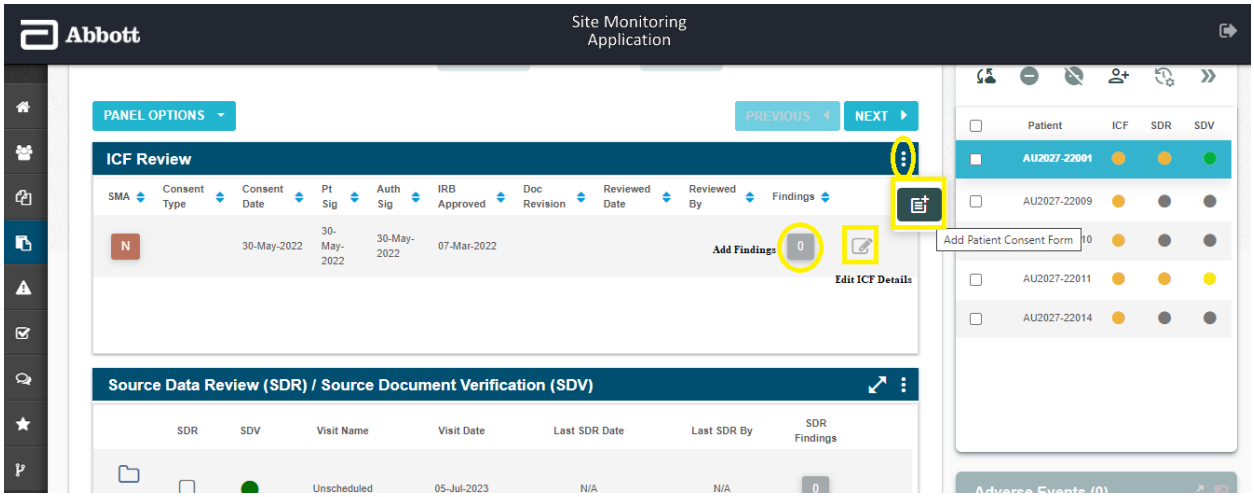

Click the edit button to edit the ICF Details for a patient.

**Important Note: If the status stays at "Unreviewed" the Monitored Flag will remain as No and the visit cannot be completed until all required ICF has been either Reviewed/Monitored or "Deferred".

Monitored Statuses and Definitions:

- Unreviewed – ICF Review has *not* been completed and is *not* considered monitored.
- Reviewed – ICF Review has been complete and is considered monitored.
- No Review Needed – ICF review was completed in the previous PMV and no re-consents are needing to be reviewed.
- Missing Source – ICF Review has been complete however there are missing source associated with this patients ICF. SMA will automatically prompt user to create a finding associated with the Missing Source.

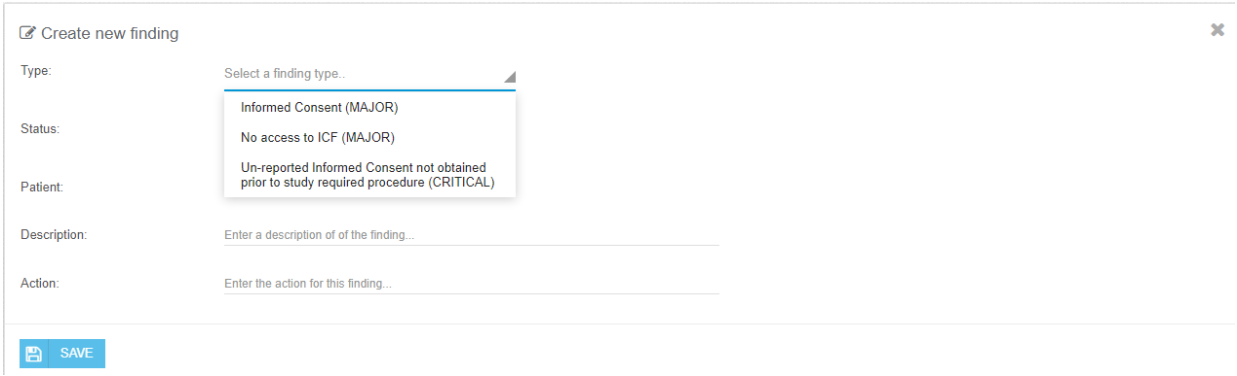

Click the findings box to add findings to a specific ICF for a patient.

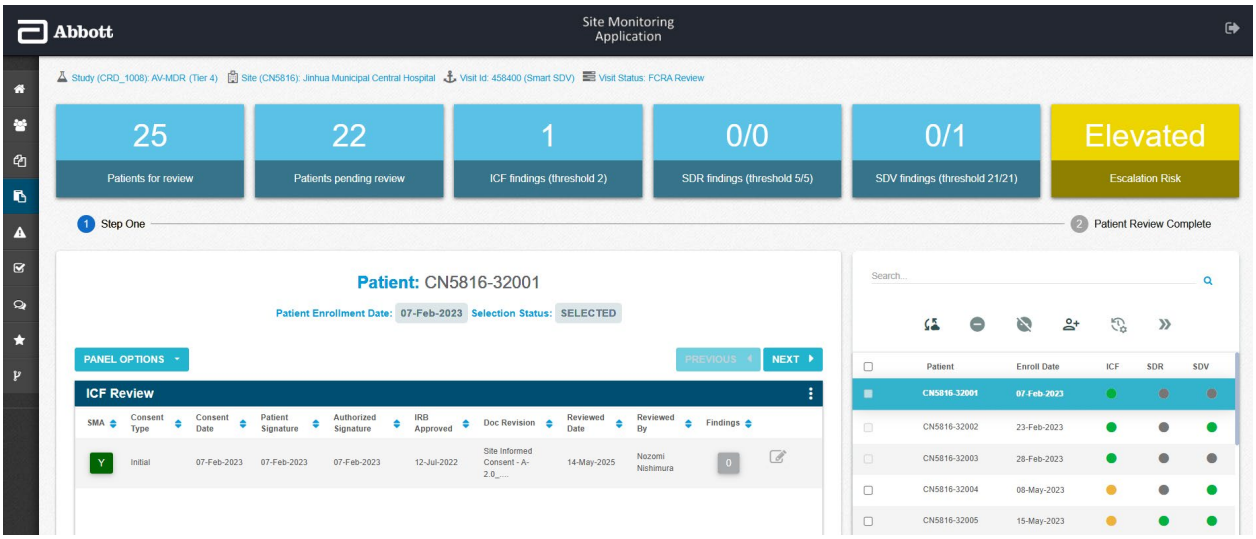

Once you click the Findings box to add a finding to the ICF for the patient, it will take you to the finding details specifically for ICF. The ICF Findings will display for selection.

Specific ICF Finding types will display to select from and each finding type will have a category displayed next to them in parenthesis.

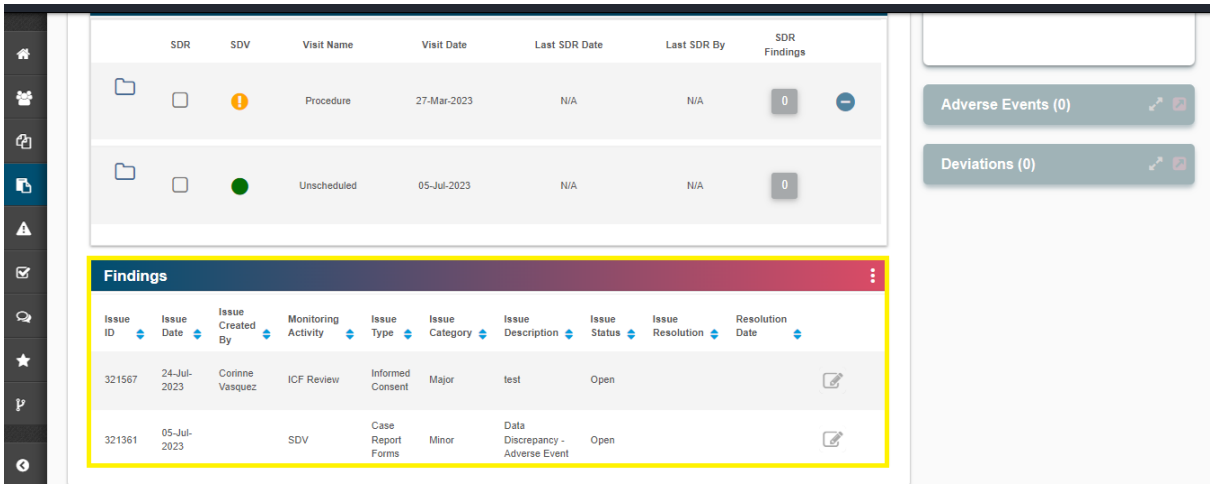

- For those findings indicated with '(Major)' next to them these will count towards your escalations. Escalations are determined for ICF Review by the number of findings in relation to how many Initial Informed Consents need to be reviewed.
    - If the number of findings breaches the number based upon the Tier level and lot then reserved for escalation patients will be brought in for review.
- For the ICF Finding that is indicated with '(Critical)', when this finding is created the system <u>will automatically force **all patients** with an initial ICF to be brought in</u>, not just the reserved for escalation patients.

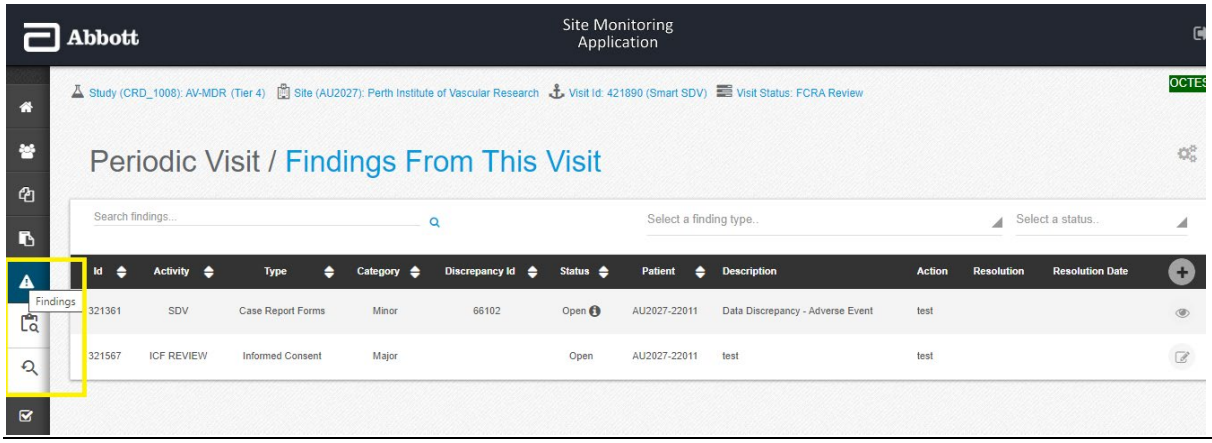

Any findings that were created during this visit that count towards your escalations will display in the Cards and the Risk status will change as well.

Findings created will also display in a specific Findings section within the Patient Review Screen. Must view these patient-by-patient in this view.

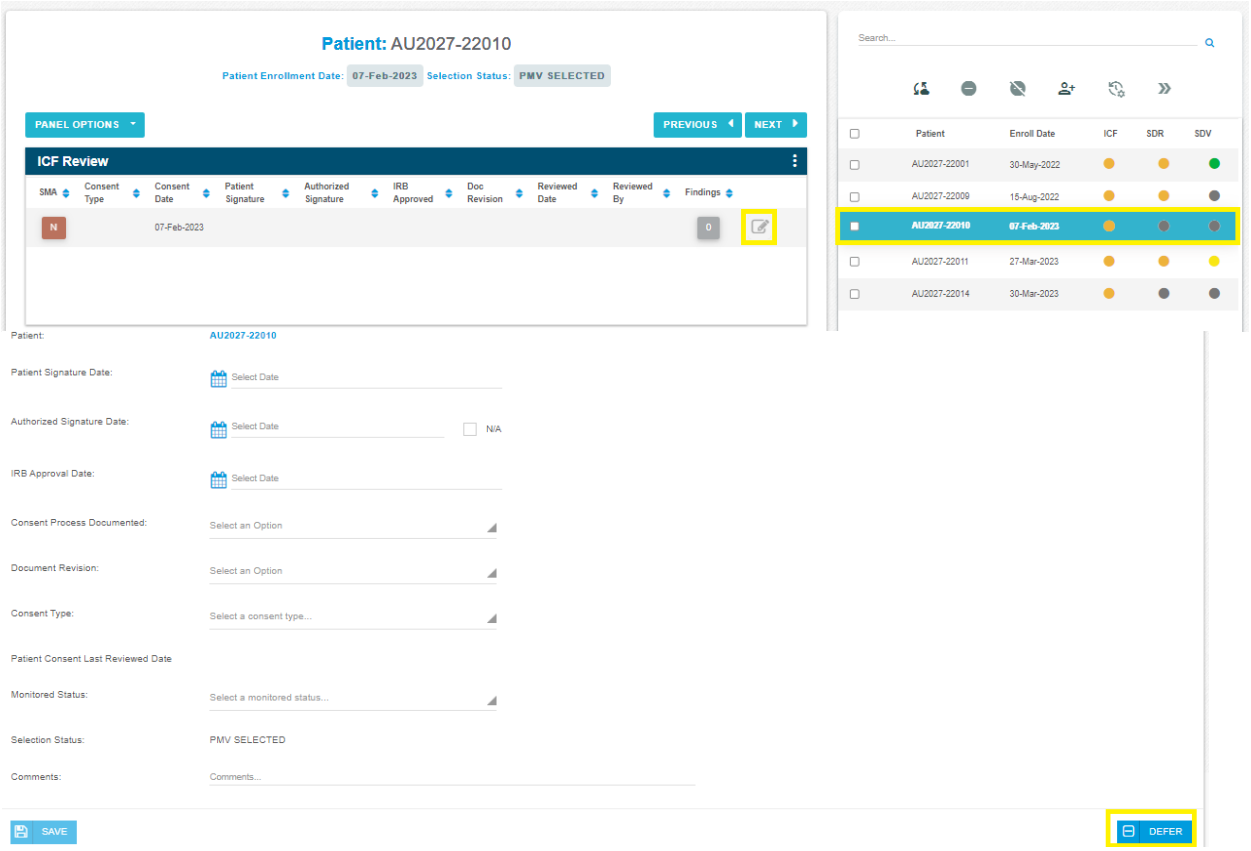

In addition, findings created will also display within the Findings Menu where all findings can be seen for from this visit for all patients instead of just patient-by-patient.

If for some reason you were unable to complete ICF Review for a specific patient, the ability to defer is available either for a specific patient or group of patients.

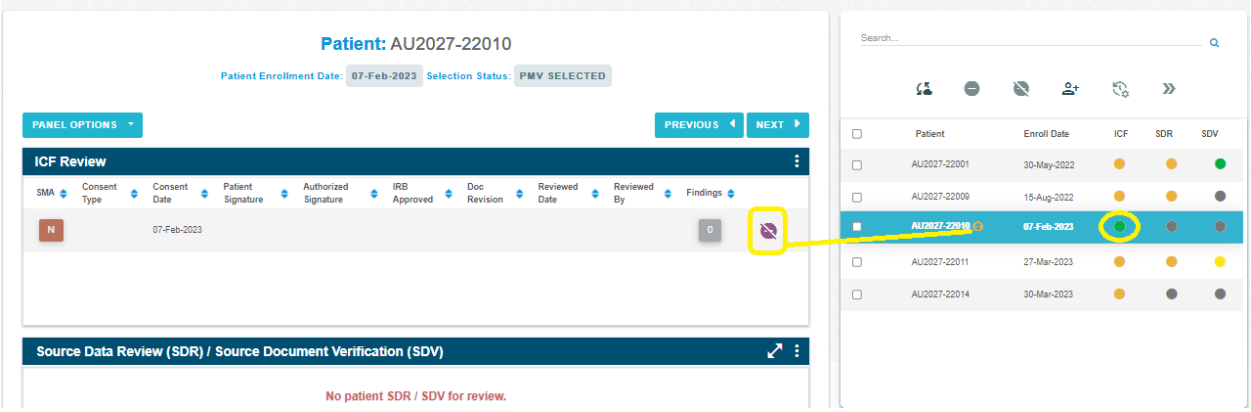

To defer a single patients ICF, simply click on the edit icon. This will take you to the ICF Details screen where there will be a button labeled Defer.

Upon selecting Defer, a deferment reason and comments must be provided. Once the Deferment Reason and Deferment Comments are inputted the Save button will be enabled.

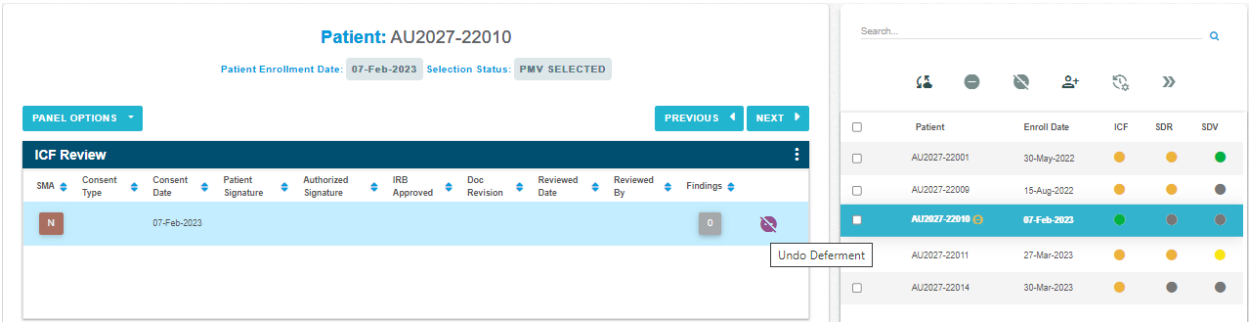

Clicking save will put the status of this patient as deferred. The patients color dots will change to green as completed and additional icons will display to represent that the patient is deferred.

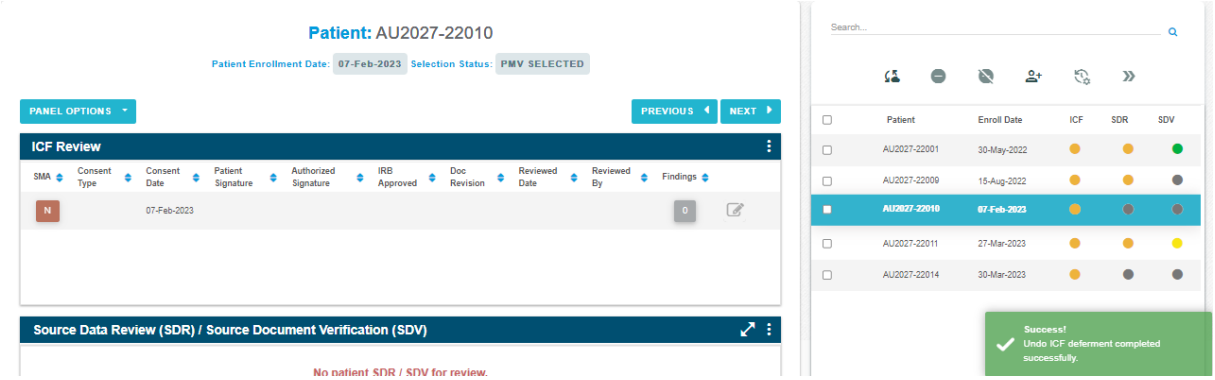

**Important Note: Deferment of a patient can only occur one time, therefore if you defer this patient at this PMV, the next PMV will automatically force this patient for review and deferment will no longer be allowed.

If a mistake was made and the patient needs to be undeferred, simply select the undefer button next to the patient.

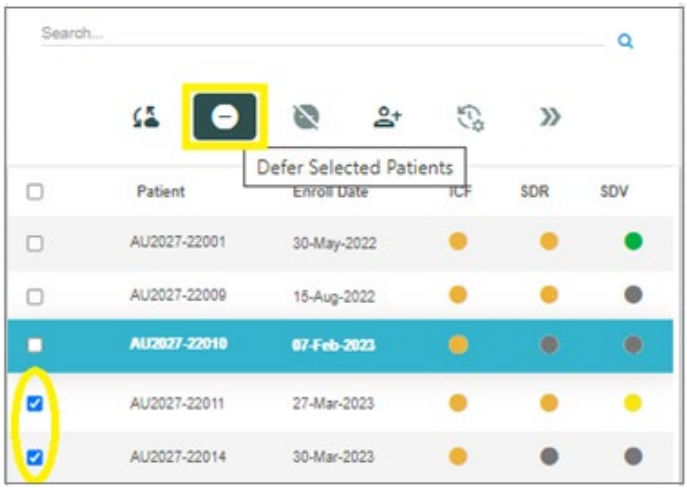

Selecting the Undo Deferment option will put the patient back to the previous state prior to deferring.

If there are a group of patients that need to be deferred, navigate to the patient review pane and locate the checkboxes next to the patients listed.

The checkboxes will only display for those patients where review has not yet been completed.

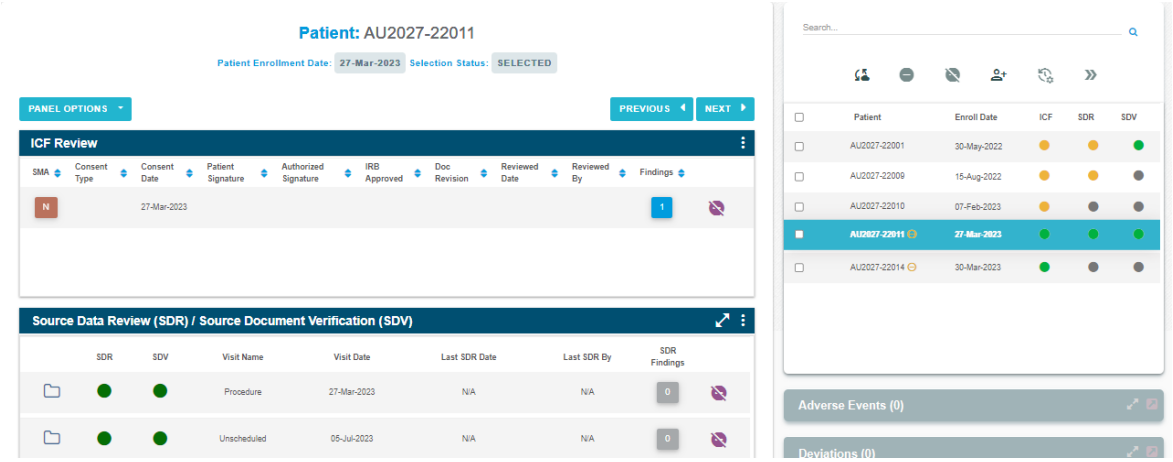

Select the group of patients that need to be deferred and click the defer icon.

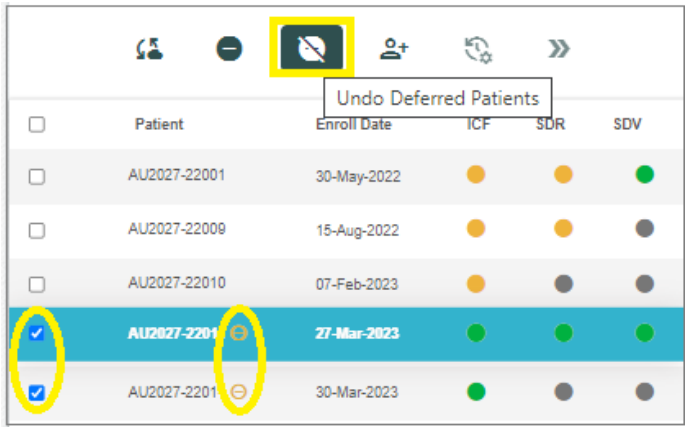

Once the group defer option is selected the deferment details will be required.

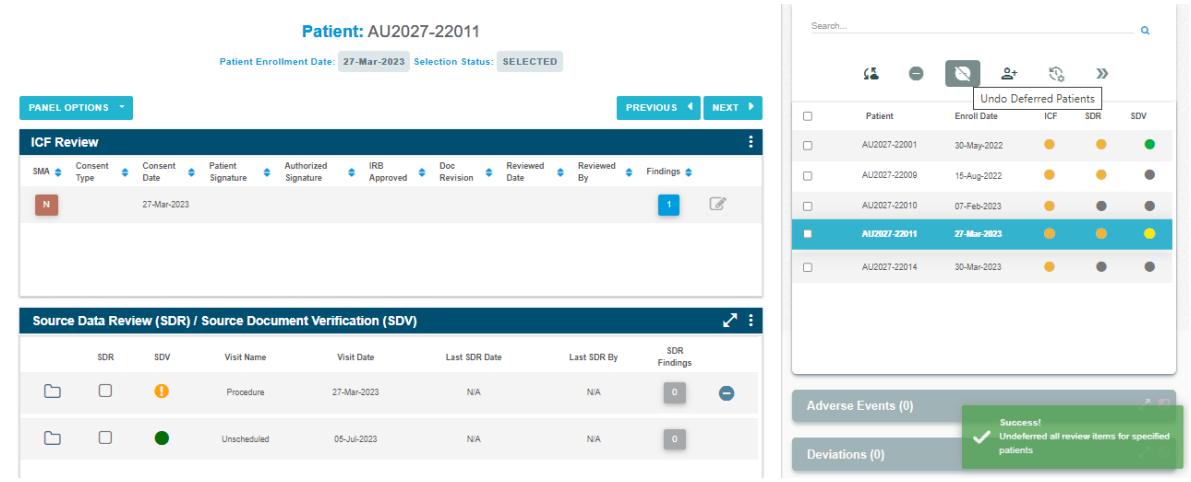

Upon clicking save the group of subjects selected will automatically have all the orange or yellow dots turn to green and deferment icons will be displayed next to each of the patients that were selected for deferment.

To undo a group deferment, simply check the boxes of those patients that were deferred and click the undefer icon.

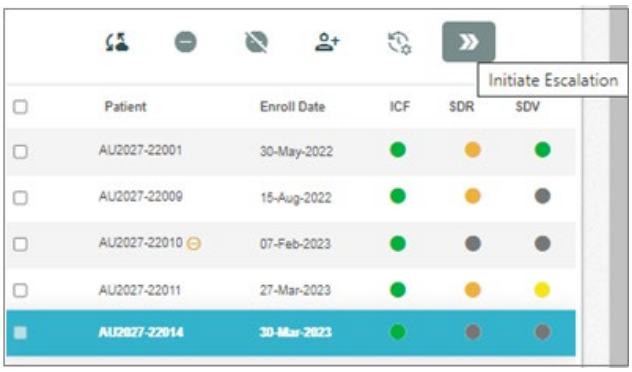

Upon clicking the Undefer option, the patients that were selected will be put back to the previous state prior to the deferment.

You are complete with your ICF Review once you see that all of the patients' color dots for ICF have been switched to green.

However, the initiate escalation option will not be enabled until all the orange or yellow dots are turned to green for ICF, SDR and SDV.

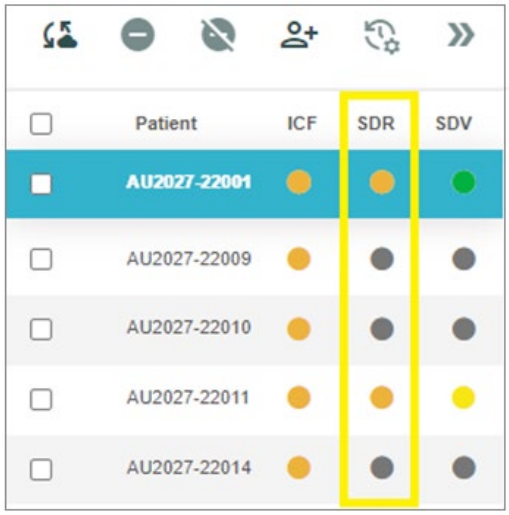

SDR/SDV Patient Review Screen

Source Document Review (SDR) Patient Review Screen

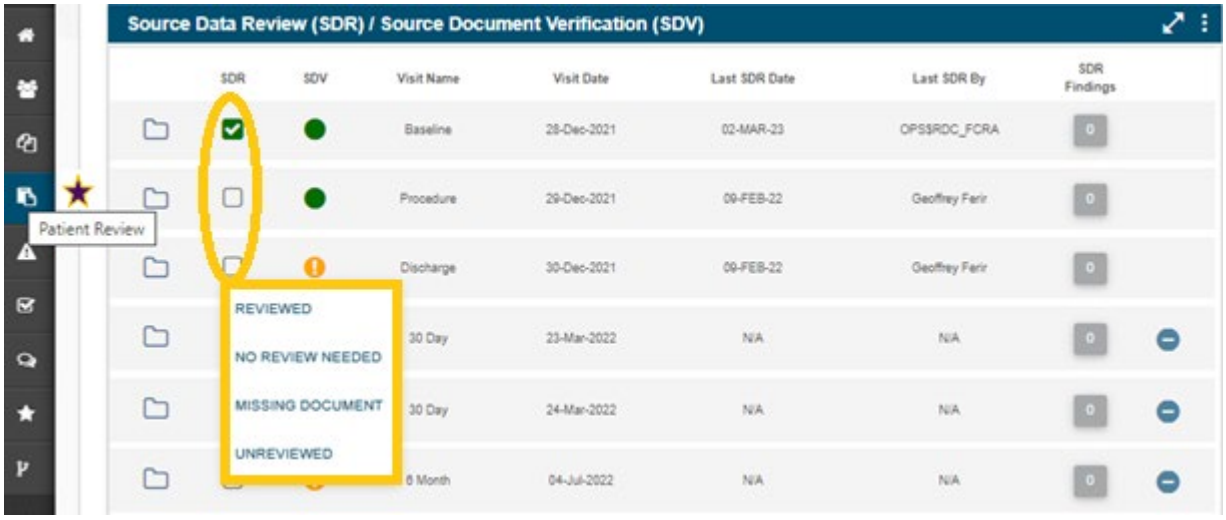

Source Document Review (SDR) and Source Data Verification (SDV) review will now need to occur within the Patient Review Menu. Users will have the ability to review each patients required SDR and SDV within the same view.

The required SDR and SDV is indicated through the patient review pane, hover over descriptions of the meaning behind the color dots is available at any time.

- When a patients SDR has an **orange** dot, this indicates that SDR is required and has not yet started.
- When a patients SDR has a **yellow** dot, this indicates that SDR review has started but is not complete yet.
- When a patients SDR has a **grey** dot the SDR is not required to be reviewed for that patient.
- When a patients SDR has a **green** dot the SDR for that patient is complete, no further SDR review is required.

To indicate the status of the SDR review for a patient where SDR is required (i.e. orange or yellow dot) simply click the empty checkbox and select the appropriate status based upon the Source Document Review.

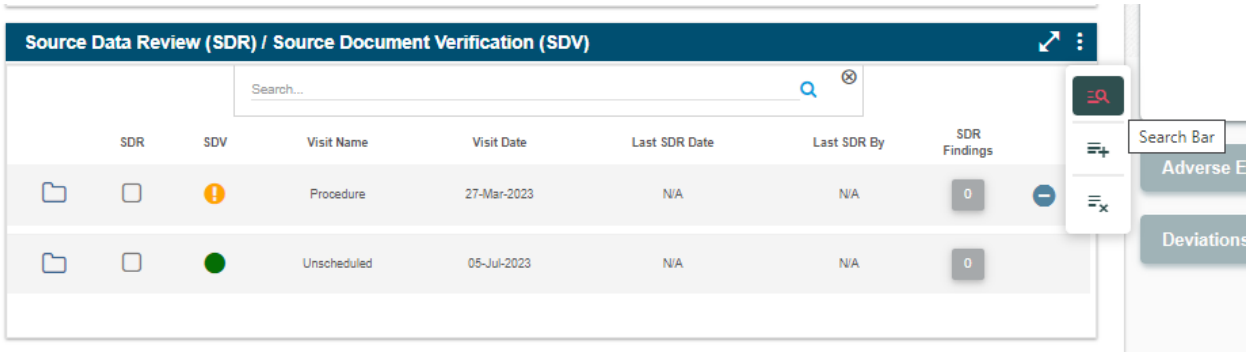

**Important Note: If the status stays at "Unreviewed" the Monitored Flag will remain as No and the visit cannot be completed until all SDR has been either Reviewed/Monitored or "Deferred".

Monitored Statuses and Definitions:

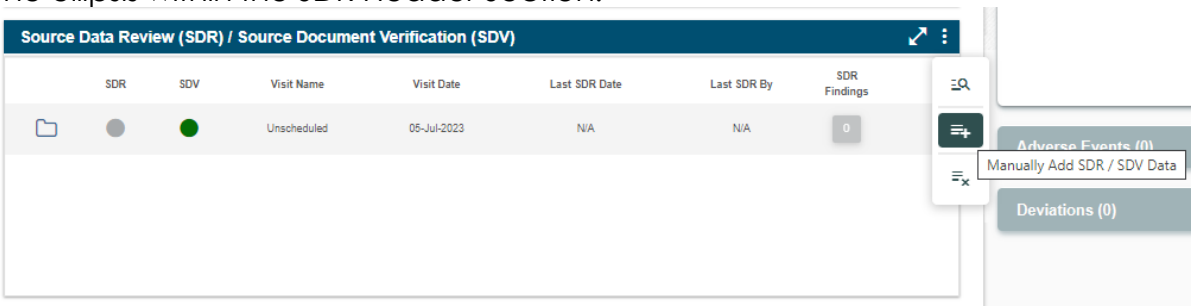

- Unreviewed – SDR has *not* been completed and is *not* considered monitored.
- Reviewed – SDR has been complete and is considered monitored.
- No Review Needed – SDR review was completed last time and no new SDR needed to review.
- Missing Source – SDR has been complete however there are missing source associated with this SDR. SMA will automatically prompt user to create a finding associated with the Missing Source.

Once SDR has been indicated with the appropriate status, a green checkmark will display. If SDR has not been completed for a visit the checkbox will remain blank.

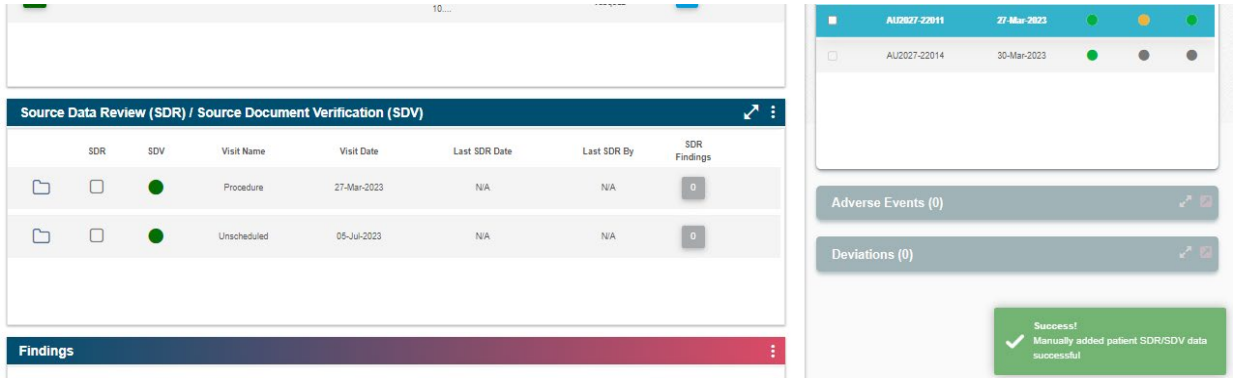

If you need to search for a specific SDR you can do so by clicking the ellipsis within the SDR Header section.

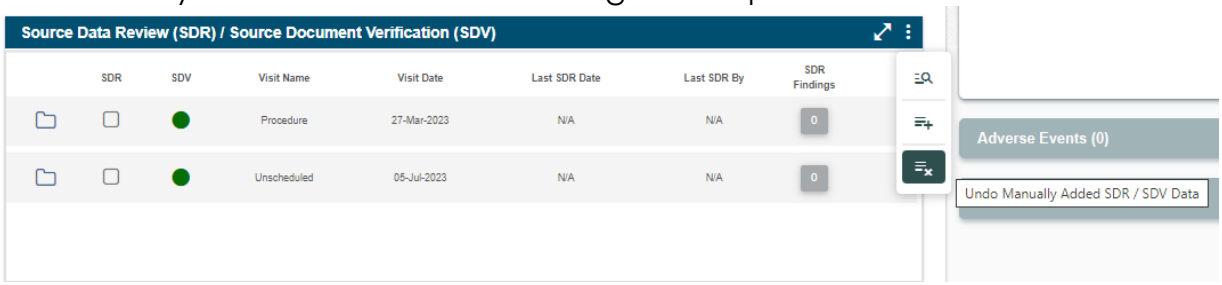

If you need to manually add SDR to a specific subject, you can do so by clicking the ellipsis within the SDR Header Section.

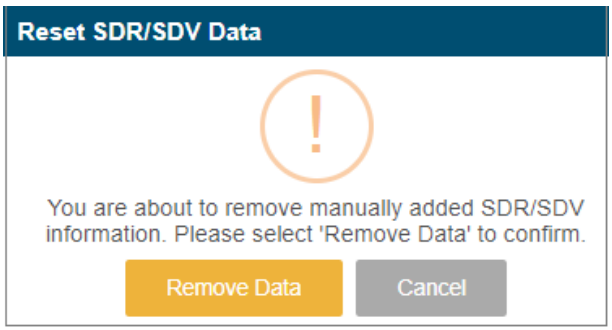

Upon selecting to manually add SDR to that patient any additional SDR that was not originally required or listed will pull in for review.

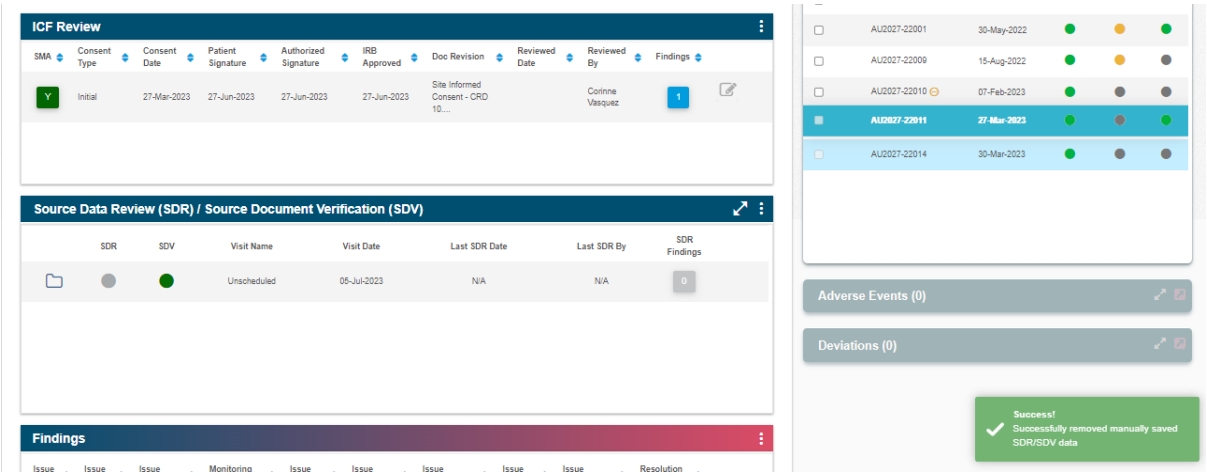

If you accidentally add SDR manually to a patient, you have the option to Remove the manually added SDR data also through the ellipsis.

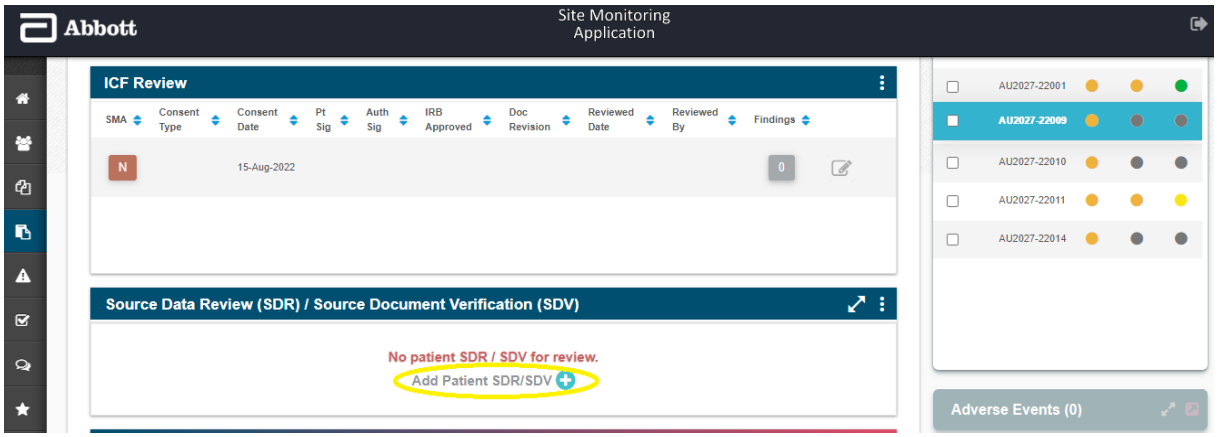

Upon selecting the option to Undo Manually Added SDR data a prompt will request for your to confirm.

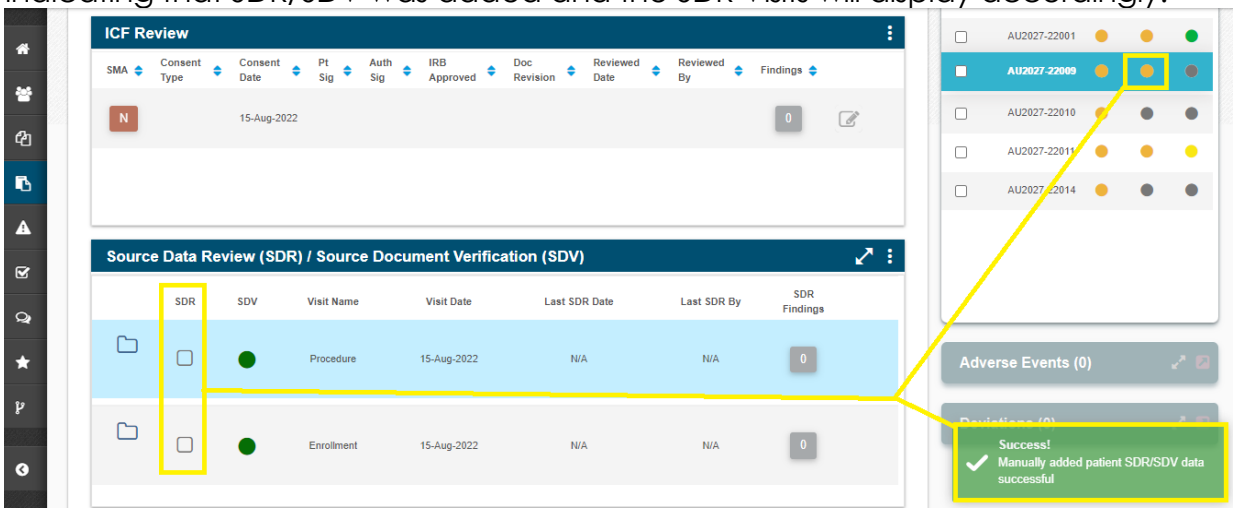

Upon confirming and pressing the "Remove Data" button any manually added SDR will be removed from the listing.

If a subject does not require SDR a grey dot will appear in that column. However, if SDR is needed to be reviewed for this patient there is an option to add SDR at any time.

After selecting the manual add patient SDR/SDV plus button a message will display indicating that SDR/SDV was added and the SDR Visits will display accordingly.

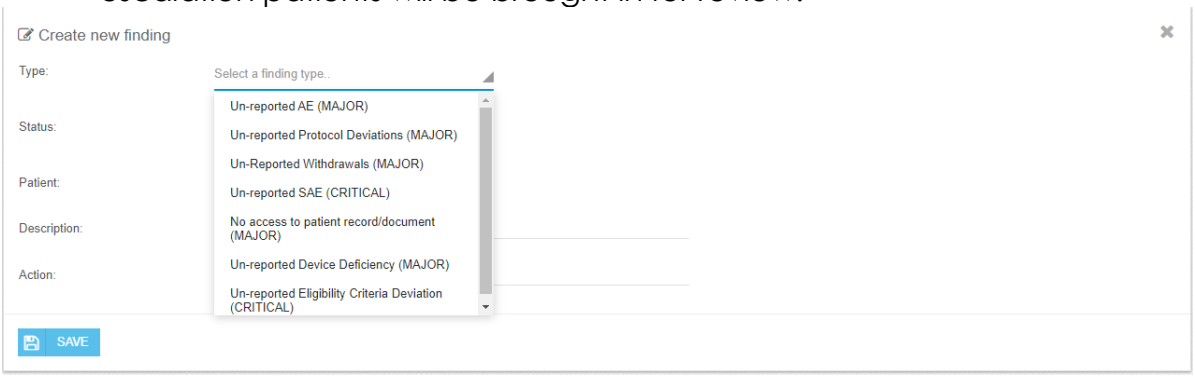

If there is no new SDR/SDV data to review for the patient selected a proper message will indicate this and nothing will be added to the SDR/SDV menu.

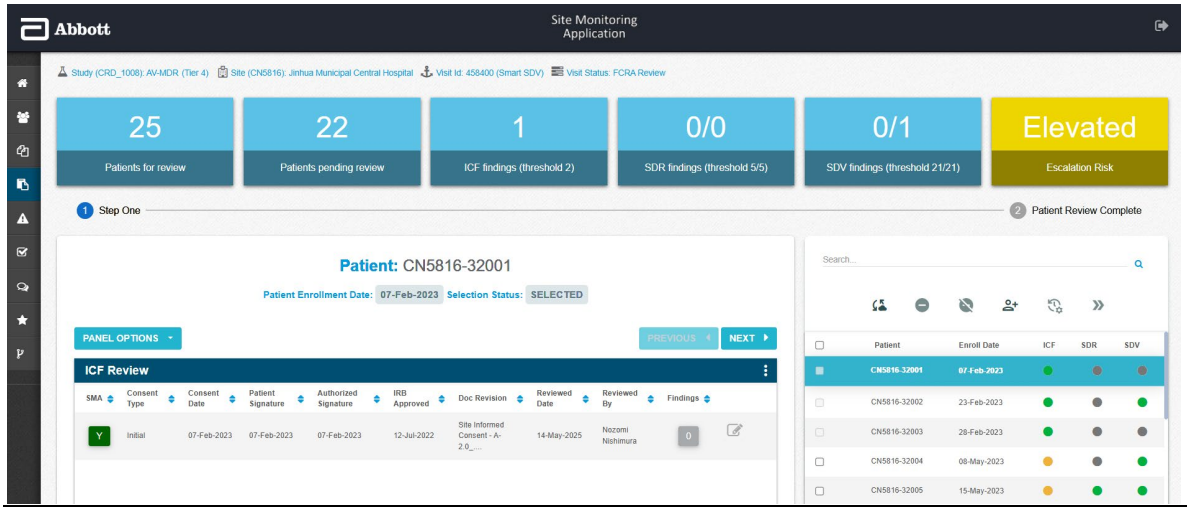

To add findings to a specific SDR visit, simply click on the SDR Findings box. This will take you to the finding details screen.

Specific SDR Finding types will display to select from and each finding type will have a category displayed next to them in parenthesis.

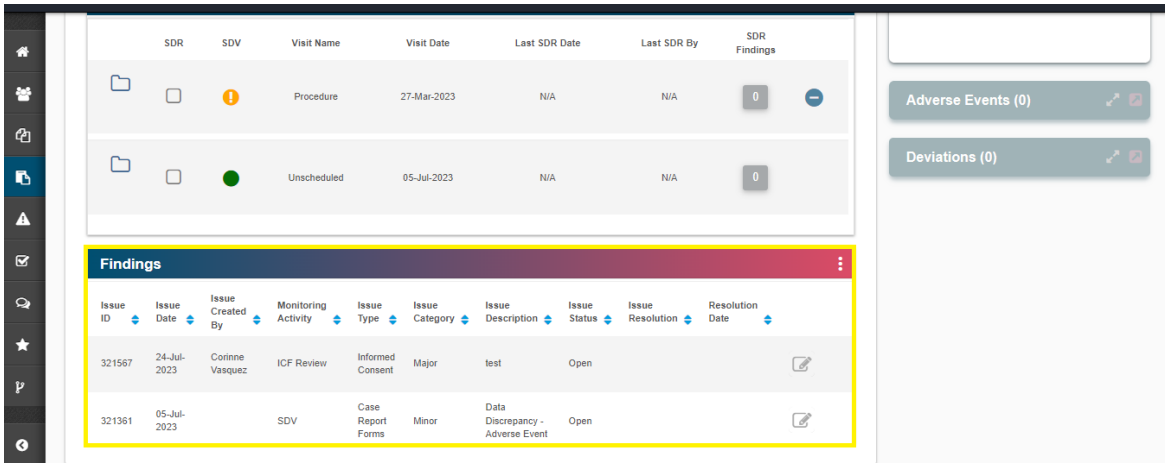

- For those findings indicated with '(Major)' next to them, these will count towards your escalations. Escalations are determined for SDR by the number of findings in relation to how many Visits have been received and need to be reviewed.
    - If the number of findings breaches the number based upon the Tier level and Lot then reserved for escalation patients will be brought in for review.
- For the SDR Findings that are indicated with '(Critical)' when these findings are created the system will automatically force **escalation to occur** even if only one finding has been created and upon escalation the reserved for escalation patients will be brought in for review.

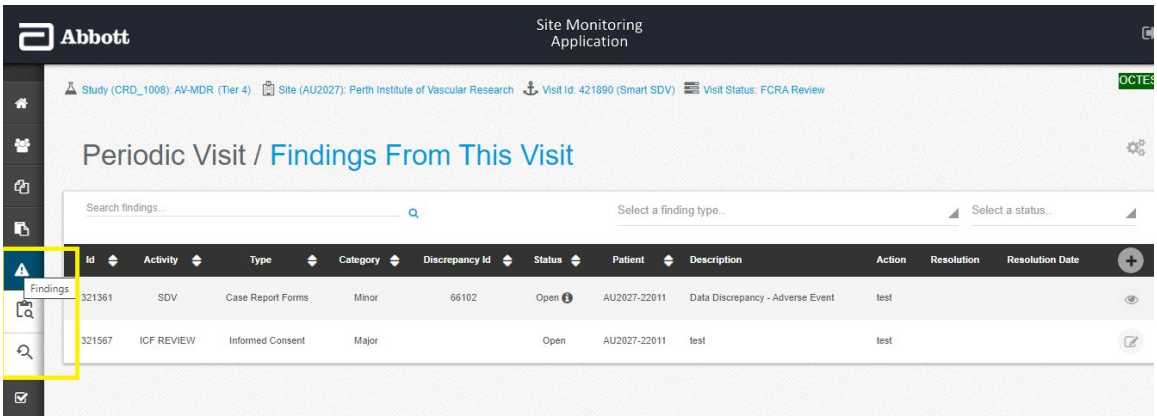

Any findings that were created during this visit that count towards your escalations will display in the Cards and the Risk status will change as well.

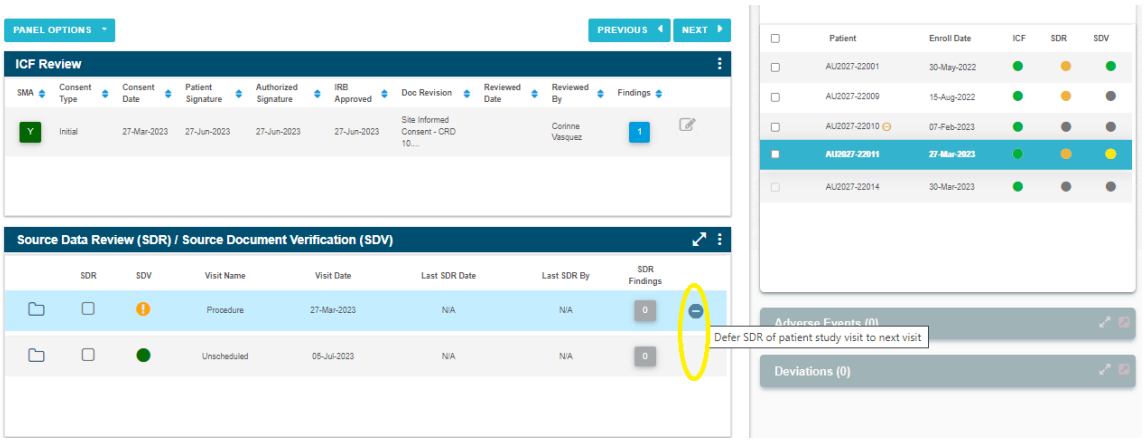

Findings created will also display in a specific Findings section within the Patient Review Screen patient-by-patient.

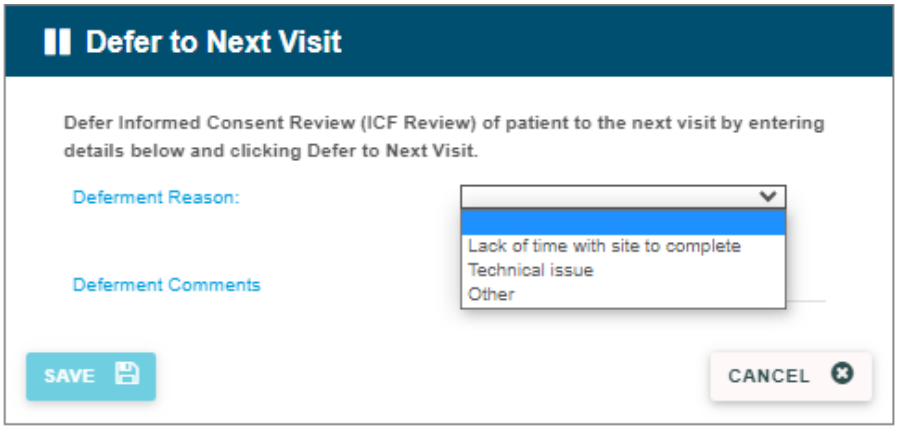

In addition, findings created will also display within the Findings Menu where all findings can be seen from this visit for all patients instead of just patient-by-patient.

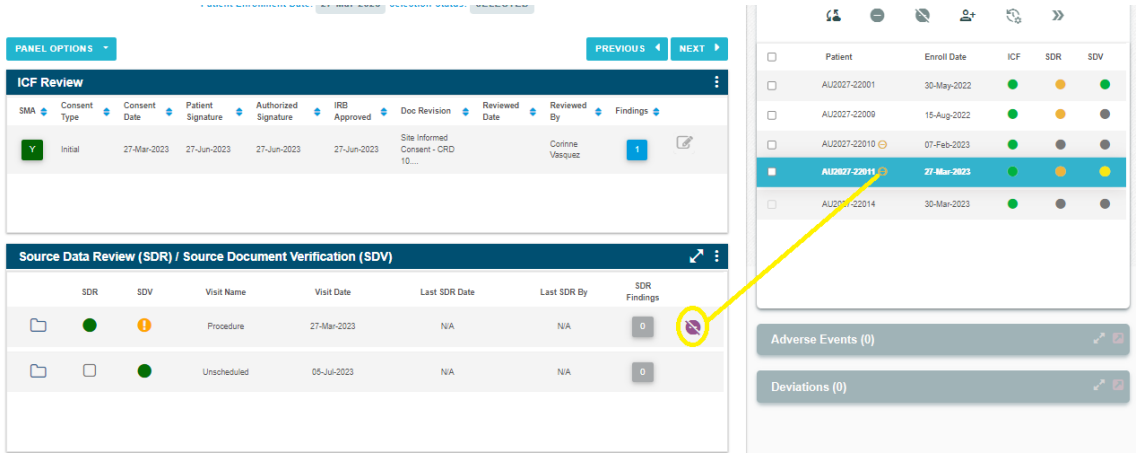

If for some reason you were unable to complete SDR Review for a specific patient, the ability to defer is available either for a specific patient or group of patients.
To defer a single patients SDR, simply click on the defer icon next to the patient in the SDR section. This option will only display next to SDR items that have not been completed with a green checkmark.

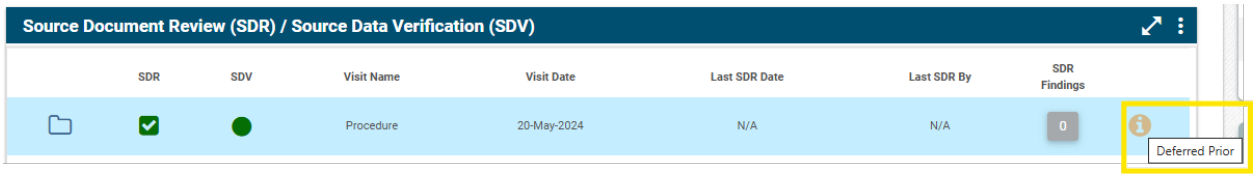

Upon selecting Defer, a deferment reason and comments must be provided. Once the Deferment Reason and Deferment Comments are inputted the Save button will be enabled.

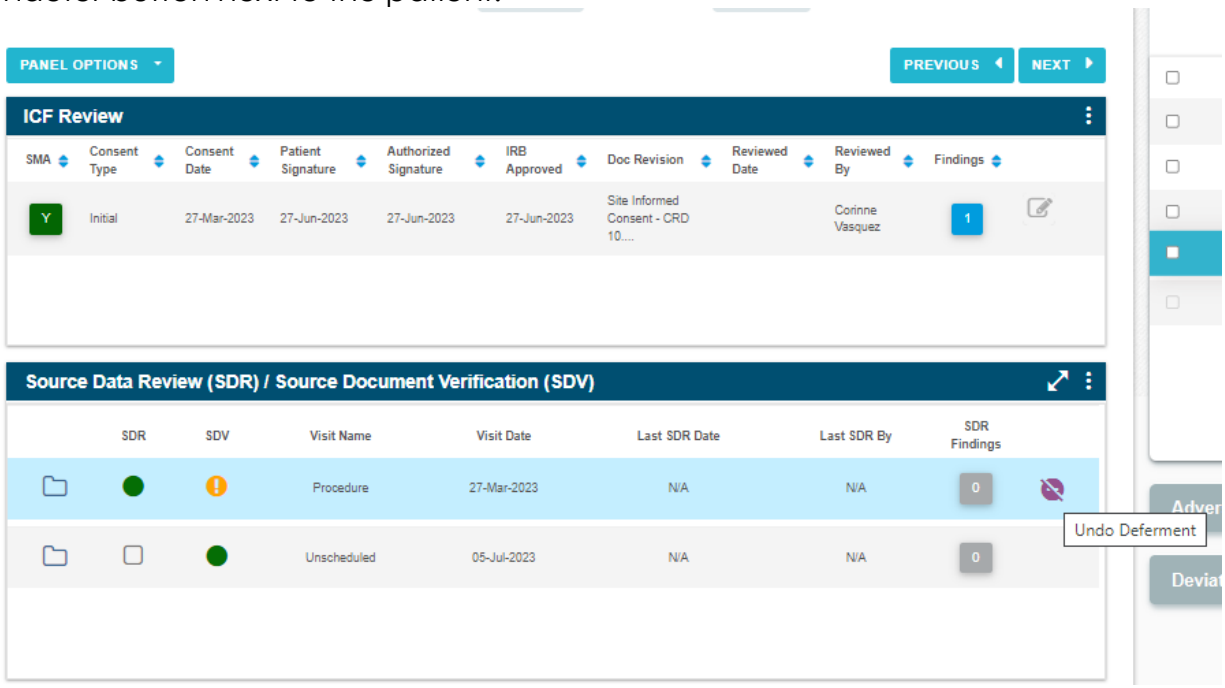

Clicking save will put the status of this patient as deferred. The patients color dots will change to green as completed and additional icons will display to represent that the patient is deferred.

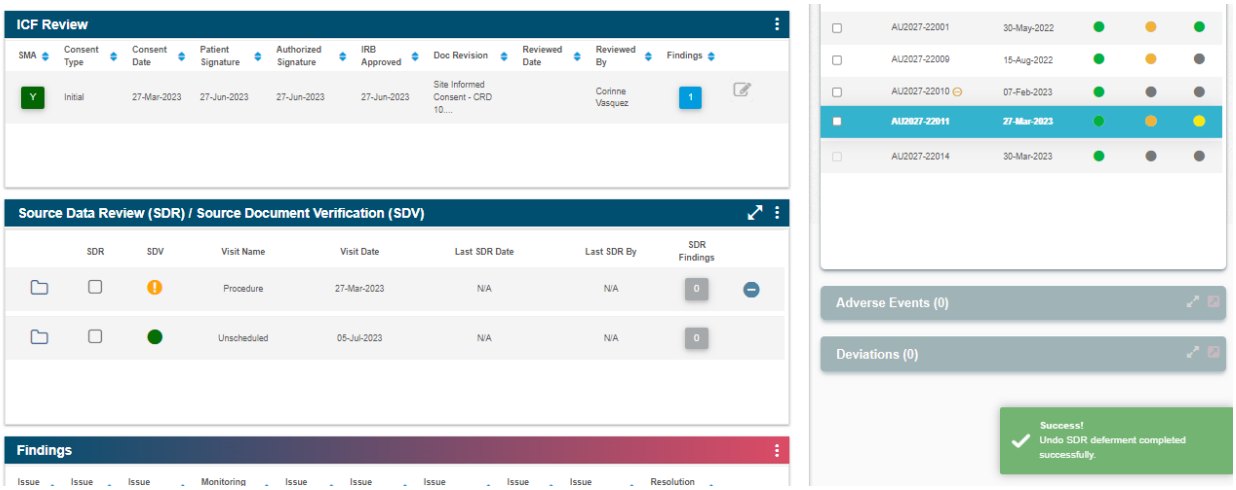

**Important Note: Deferment of a patient can only occur one time, therefore if you defer this patient at this PMV, the next PMV will automatically force this patient for review and deferment will no longer be allowed.

Deferred Prior

If a mistake was made and the patient needs to be undeferred, simply select the undefer button next to the patient.

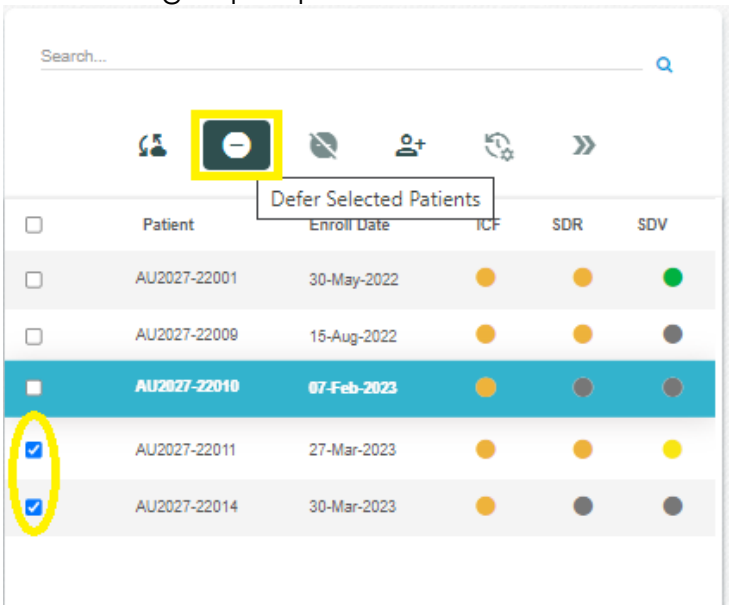

Selecting the Undo Deferment option will put the patient back to the previous state prior to deferring.

If there are a group of patients that need to be deferred, navigate to the patient review pane and locate the checkboxes next to the patients listed.

The checkboxes will only display for those patients where review has not yet been completed.

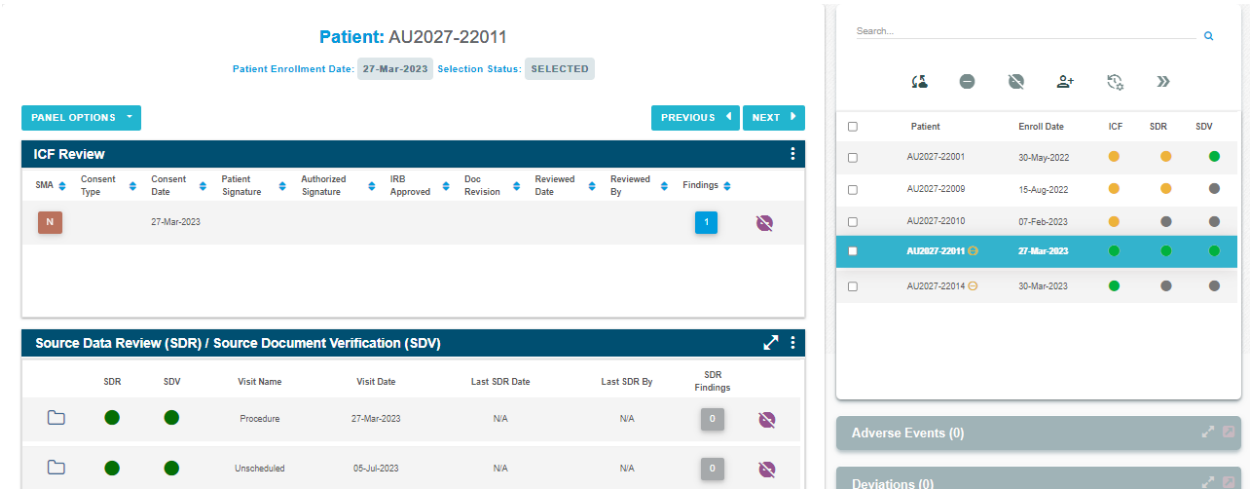

Select the group of patients that need to be deferred and click the defer icon.

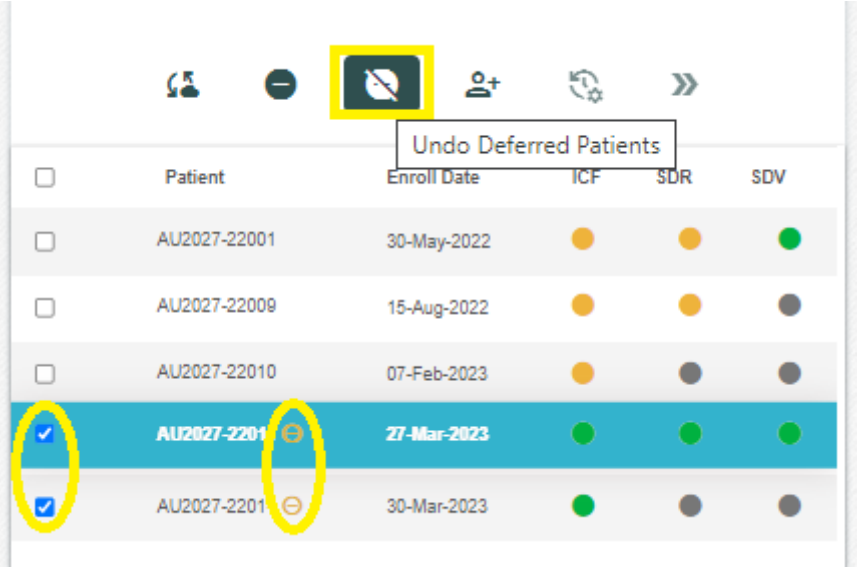

Once the group defer option is selected the deferment details will be required.

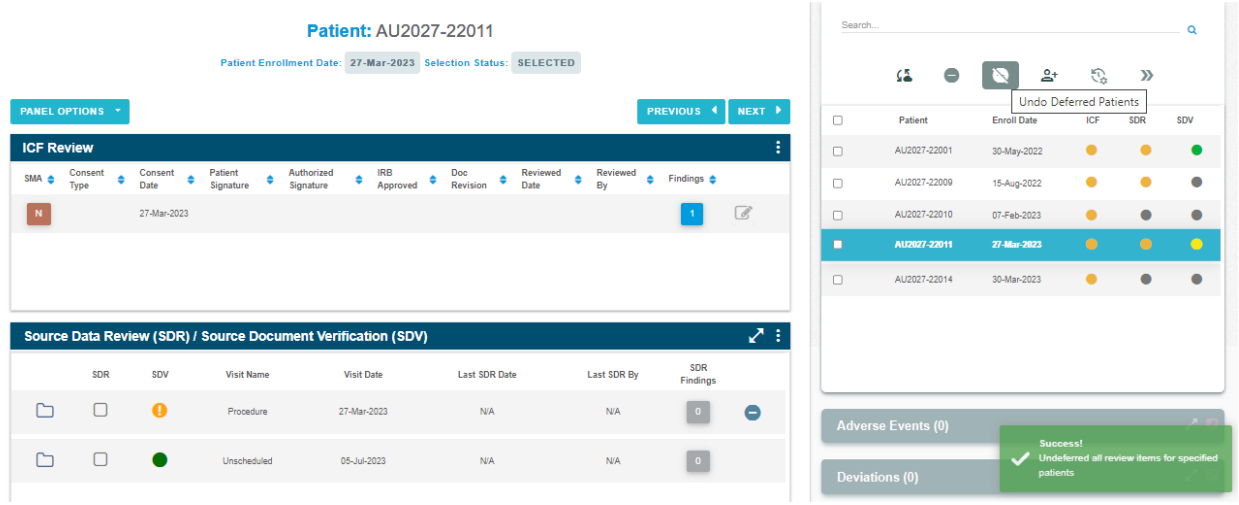

Upon clicking save the group of subjects selected will automatically have all of the orange or yellow dots turn to green and deferment icons will be displayed next to each of the patients that were selected for deferment.

To undo a group deferment, simply check the boxes of those patients that were deferred and click the undefer icon.

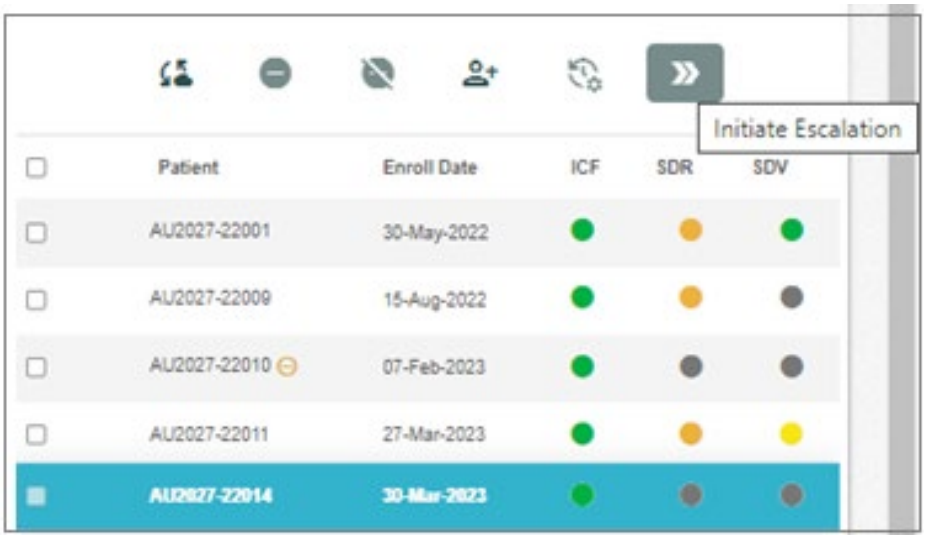

Upon clicking the Undefer option, the patients that were selected will be put back to the previous state prior to the deferment.

You are complete with your SDR Review once you see that all of the patients color dots for SDR have been switched to green.

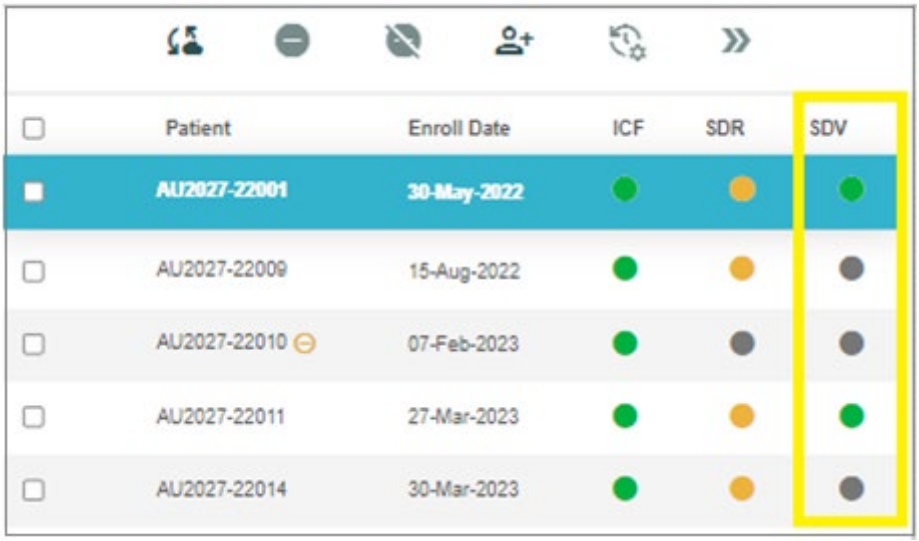

However, the initiate escalation option will not be enabled until all the orange or yellow dots are turned to green or grey for ICF, SDR and SDV.

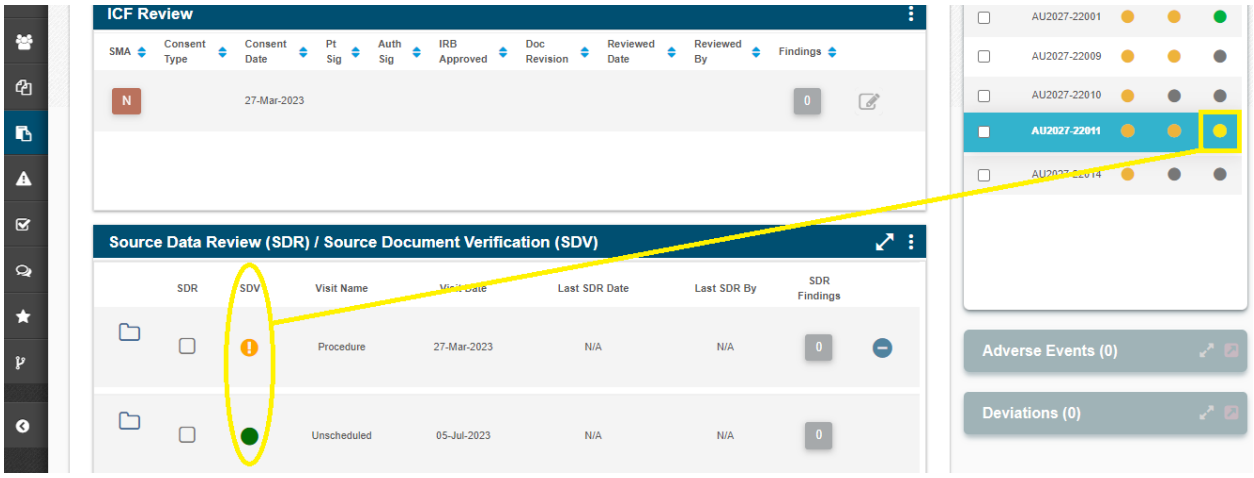

Source Data Verification (SDV) - Patient Review Screen

The required Source Data Verification (SDV) is indicated through the patient review pane. Hover over descriptions of the meaning behind the color dots is available at any time.

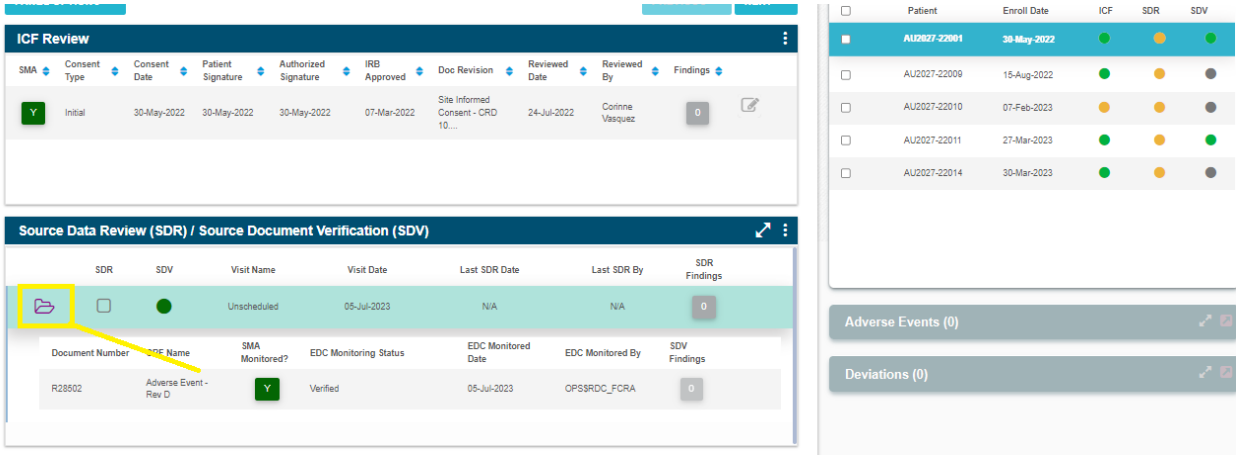

- When a patients SDV has an **orange** dot, this indicates that SDV is required and has not yet started.
- When a patients SDV has a **yellow** dot, this indicates that SDV review has started but is not complete yet.
- When a patients SDV has a **grey** dot the SDV is not required to be reviewed for that patient.
- When a patients SDV has a **green** dot the SDV for that patient is complete, no further SDV review is required.

To review the SDV for a patient click on the folder icon to expand the view underneath the SDR visit. This will display the Critical Variable CRFs that are required to be verified in RDC.
If Source Data Verification (SDV) is required for a patient the color dots will indicate orange, yellow or green depending on the status of the critical variable CRFs in RDC.

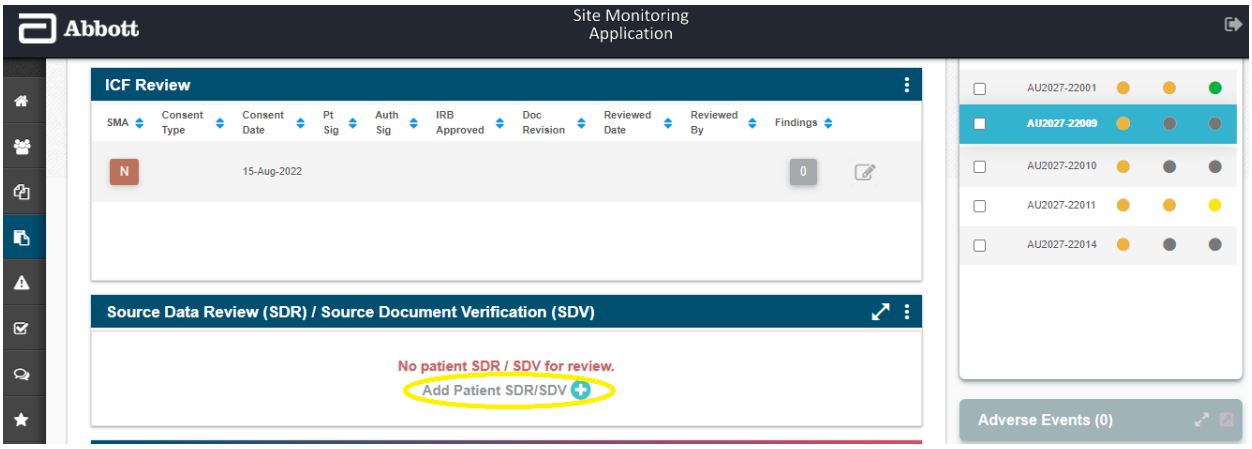

**Important Note: If you verified these CRFs prior to your PMV occurring the status of the CRF will be brought in accordingly as verified and the dot would be green. However, if verification still needs to occur in RDC the dots would show as Orange or Yellow accordingly.

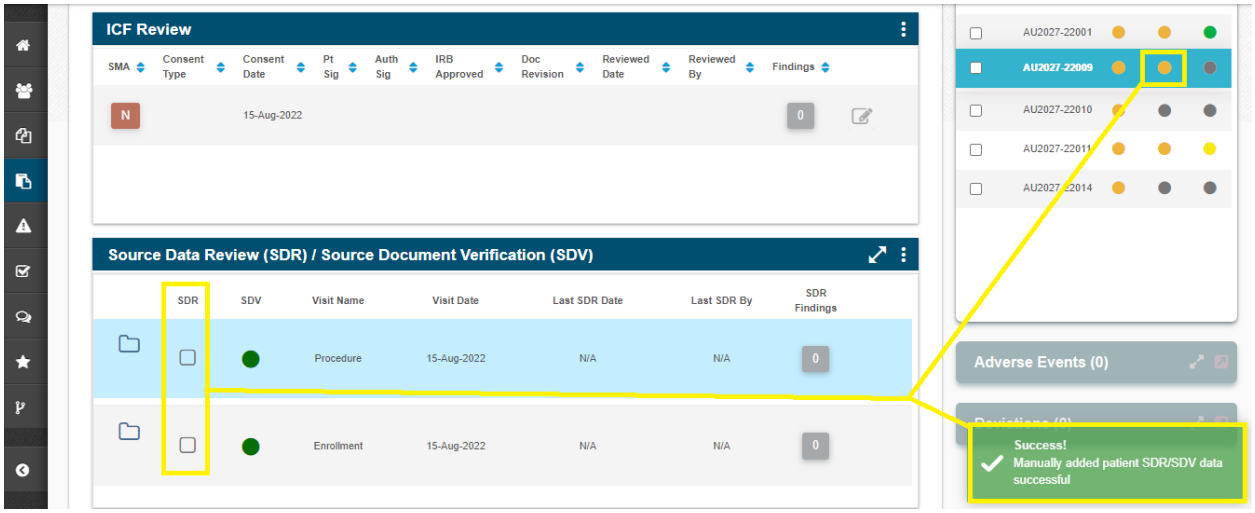

If a subject does not require SDV a grey dot will appear in that column.

However, if SDR/SDV is needed to be reviewed for this patient there is an option to add SDR/SDV at any time.

After selecting the manual add patient SDR/SDV plus button a message will display indicating that SDR/SDV was added and the SDR Visits will display accordingly.

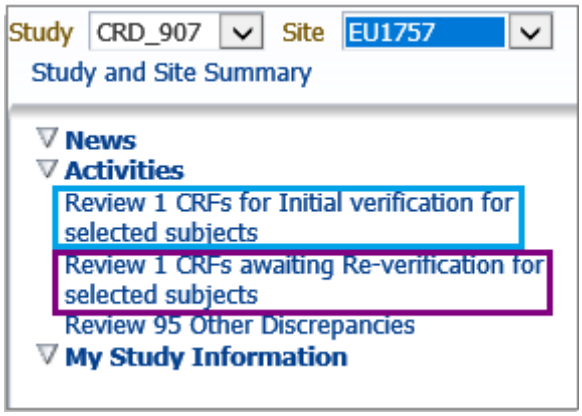

If there is no new SDR/SDV data to review for the patient selected a proper message will indicate this and nothing will be added to the SDR/SDV menu.

To complete review of the SDV CRFs within your visit all verification activity will still need to occur in RDC.

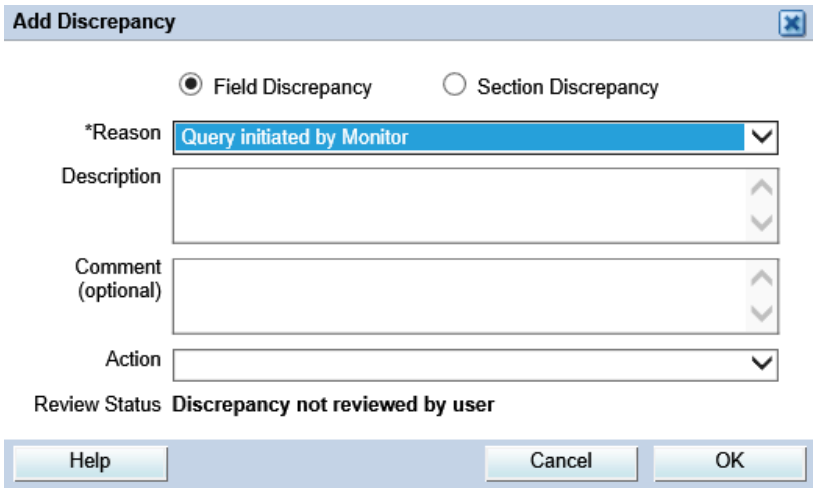

The following steps should be followed when starting your SDV while logged into SMA.

1. Log into RDC for the selected study/site during the monitoring visit.
2. Locate the Activity Link(s) displayed. There will be additional activity links based upon the selected and/or escalated subjects depending on the level of escalations.

**Important Note: These activity links will only display during the scheduled days of your visit per the SMA calendar. If you log into RDC prior to or after your scheduled monitoring visit days the Activity Links will not display.

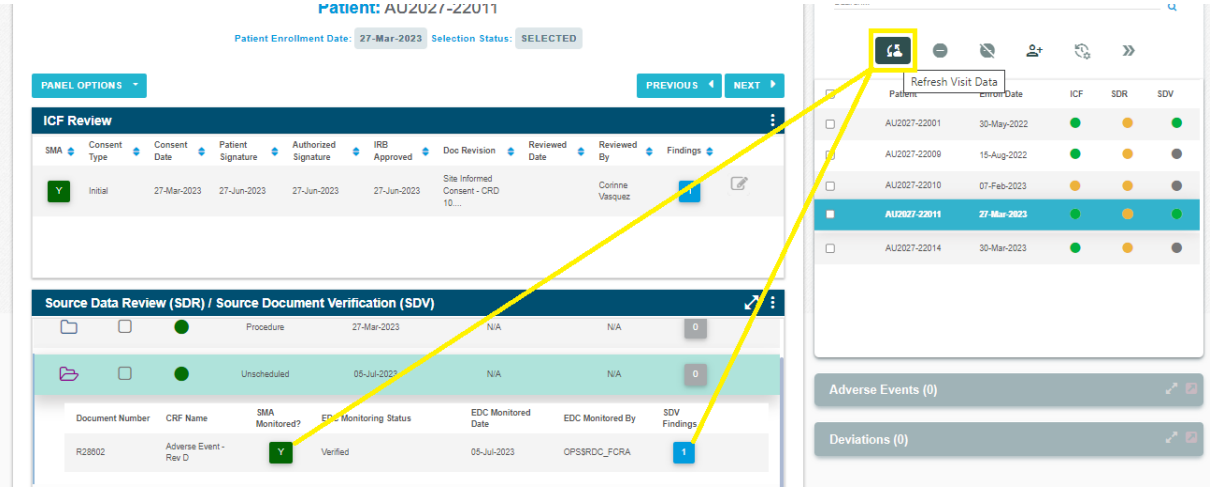

3. Click the activity link to take you to the listing of the CRFs that require monitoring verification or re-verification in RDC for your selected or escalated subjects.
4. If any monitoring findings occur during SDV, create manual discrepancies in RDC with a reason of 'Query Initiated by Monitor'.
   **Important Note: All manual discrepancies created only on Critical Variable fields with a reason of "Query Initiated by Monitor" that occurred during the monitoring visit will be automatically brought into SMA as a finding.

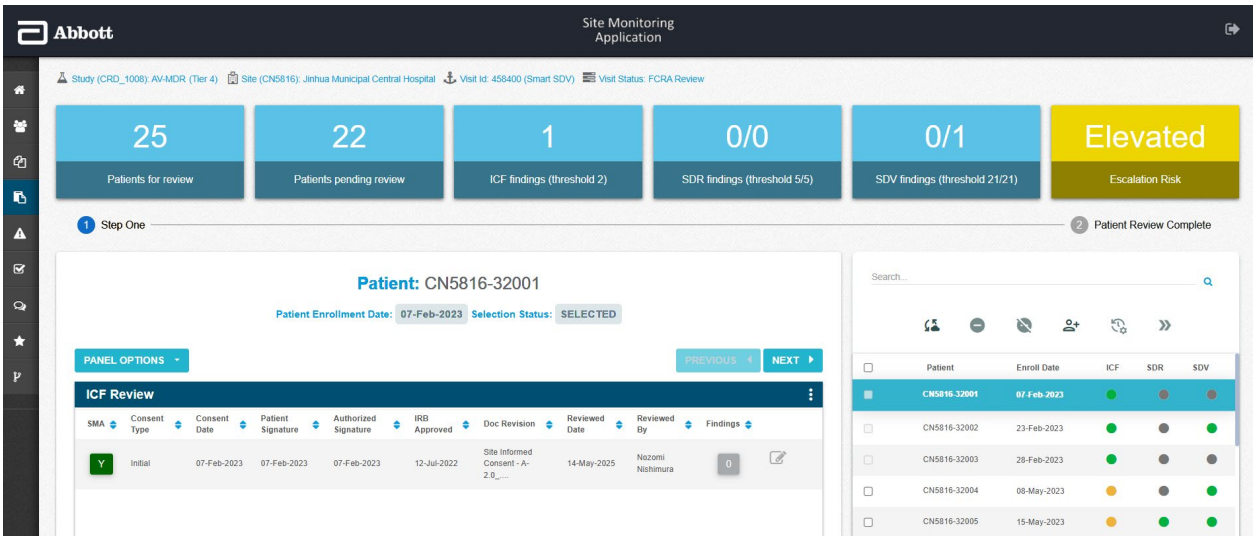

5. Once all RDC Verification/Re-verification and Manual Discrepancies have been completed for the selected and/or escalated subjects navigate back to SMA to refresh the SDV listing.

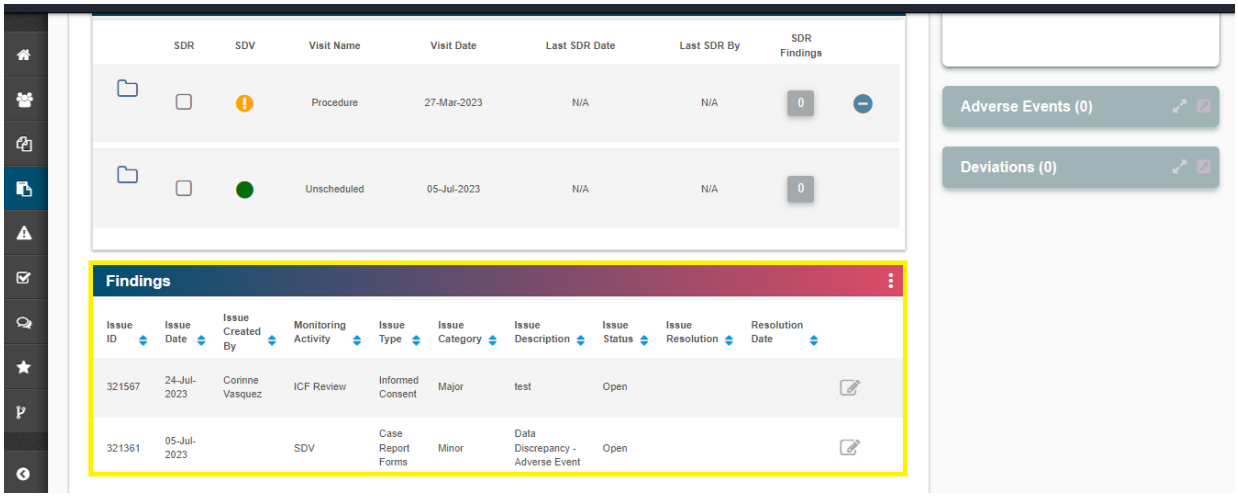

*Click the Refresh button to pull in any additional required CRFs that were entered during the monitoring

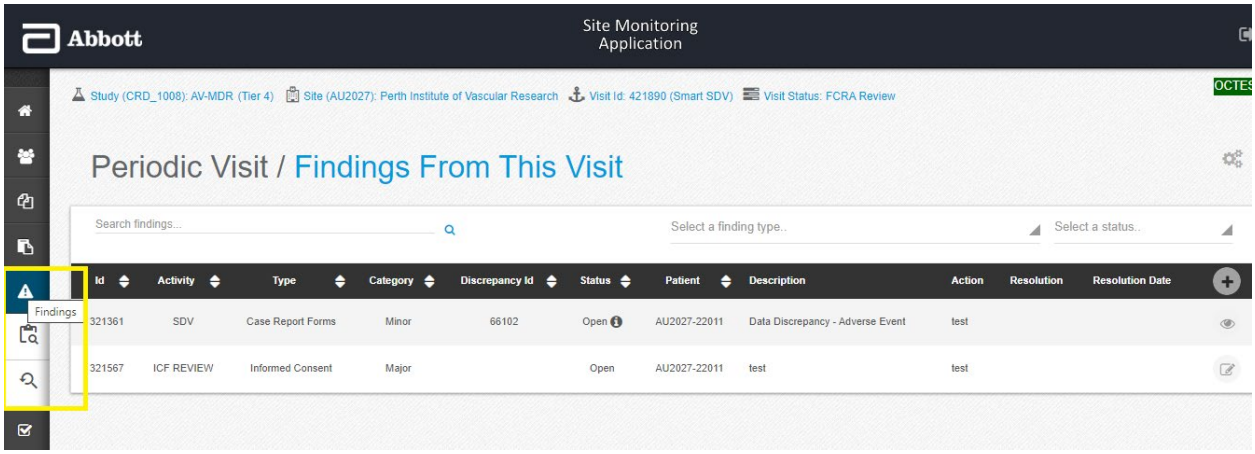

Any findings that were created during this visit that count towards your escalations will display in the Cards and the Risk status will change as well.

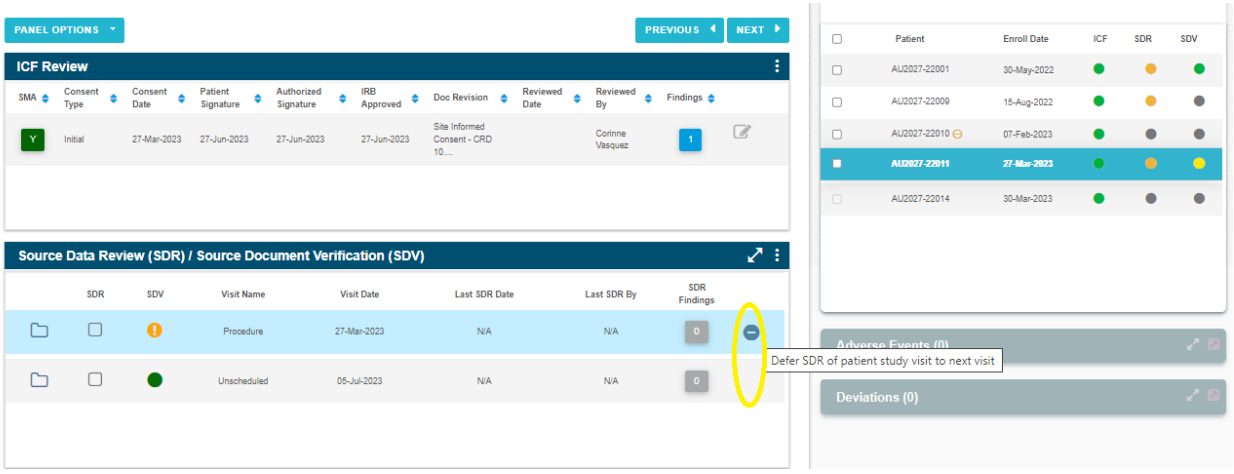

Findings created will also display in a specific Findings section within the Patient Review Screen patient-by-patient.

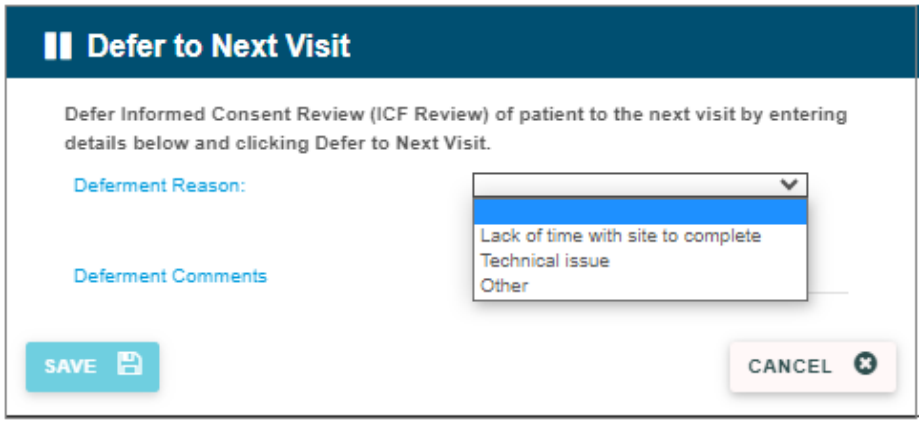

In addition, findings created will also display within the Findings Menu where all findings can be seen from this visit for all patients instead of just patient-by-patient.

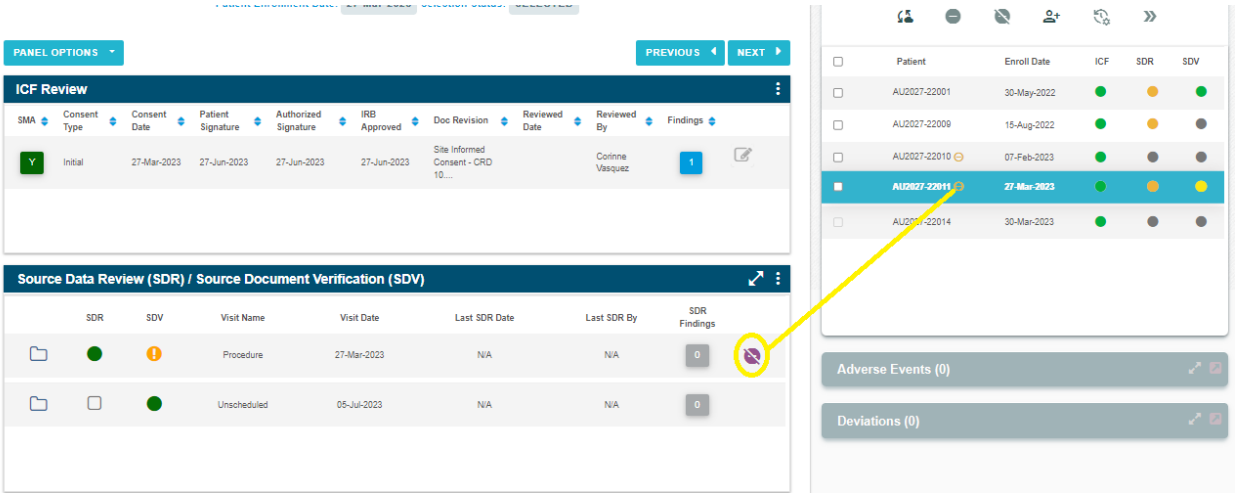

To defer a single patients SDR/SDV, simply click on the defer icon next to the patient in the SDR section.

Upon selecting Defer, a deferment reason and comments must be provided. Once the Deferment Reason and Deferment Comments are inputted the Save button will be enabled.

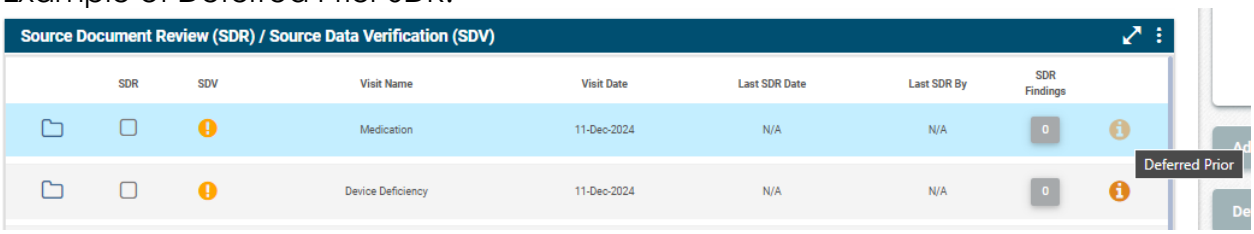

Clicking save will put the status of this patient as deferred. The patients color dots will change to green as completed and additional icons will display to represent that the patient is deferred.

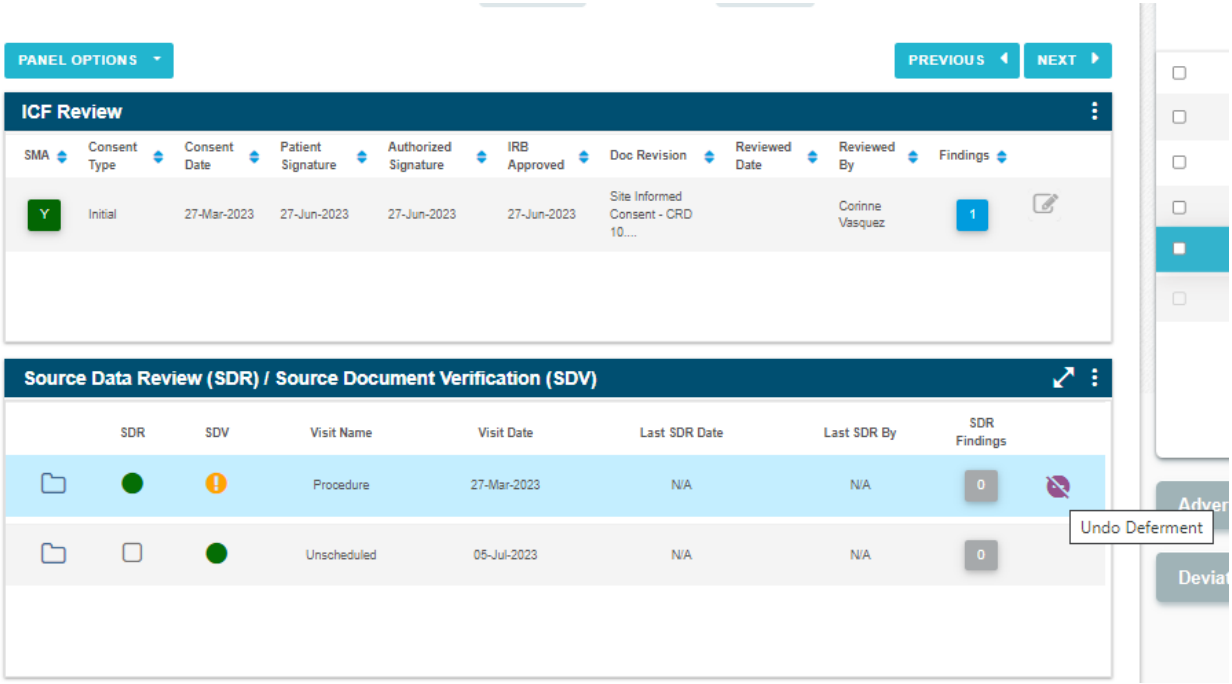

**Important Note: Deferment of a patient can only occur one time, therefore if you defer this patient at this PMV, the next PMV will automatically force this patient for review and deferment will no longer be allowed.

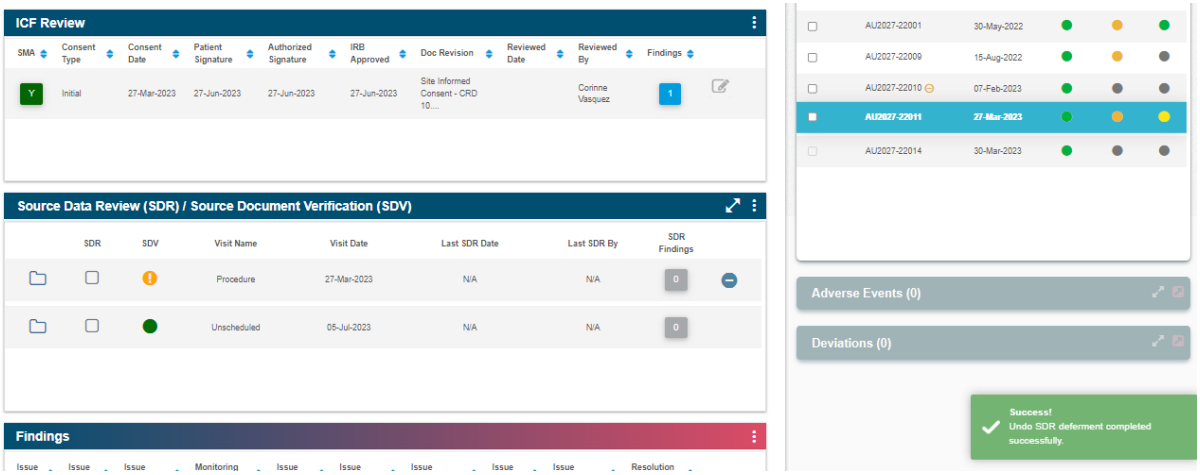

Example of Deferred Prior SDR:

If a mistake was made and the patient needs to be undeferred, simply select the undefer button next to the patient.

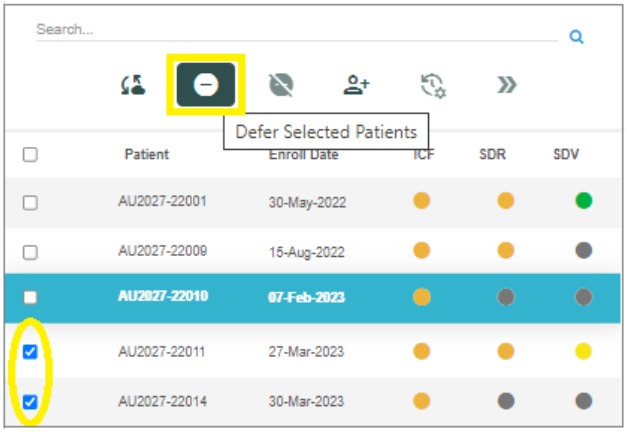

Selecting the Undo Deferment option will put the patient back to the previous state prior to deferring.

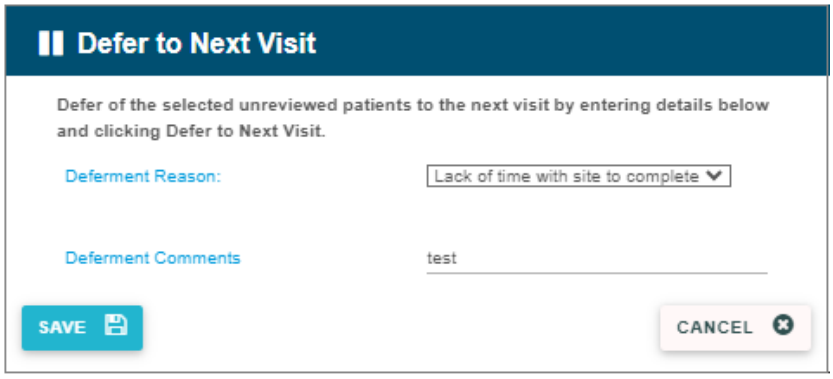

If there are a group of patients that need to be deferred, navigate to the patient review pane and locate the checkboxes next to the patients listed.

The checkboxes will only display for those patients where review has not yet been completed.

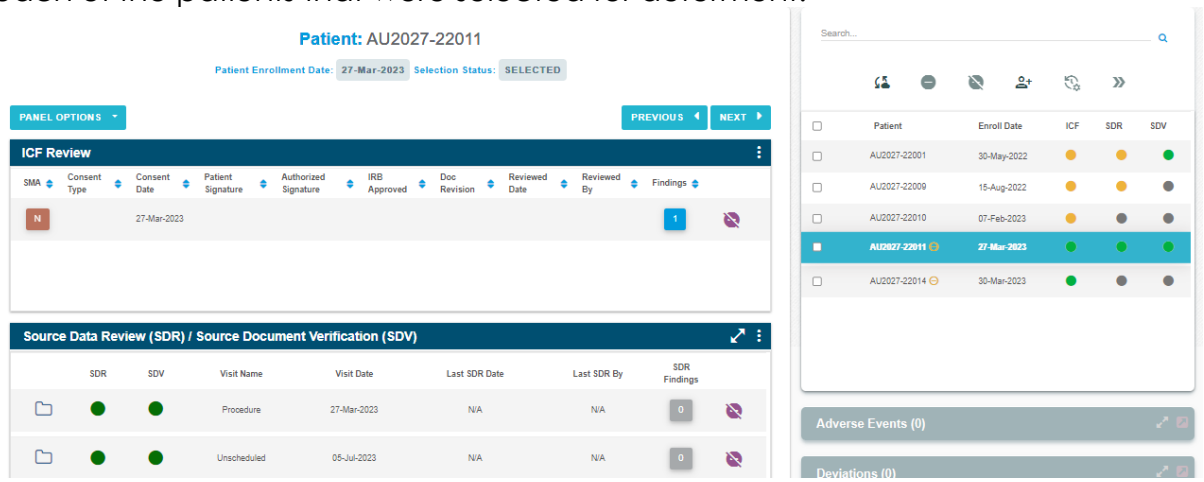

Select the group of patients that need to be deferred and click the defer icon.

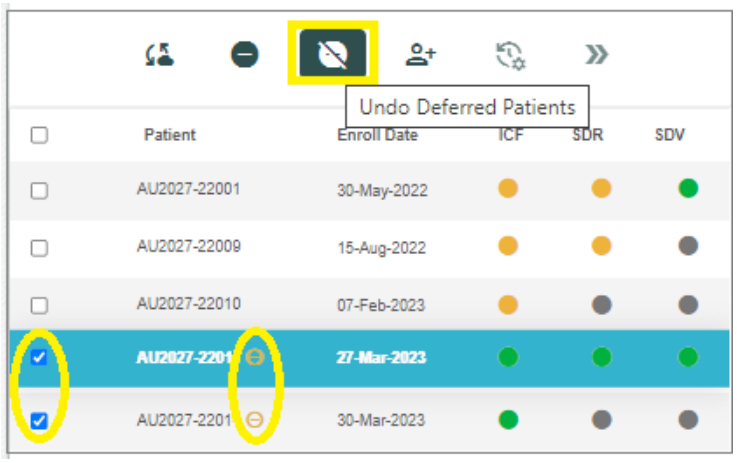

Once the group defer option is selected the deferment details will be required.

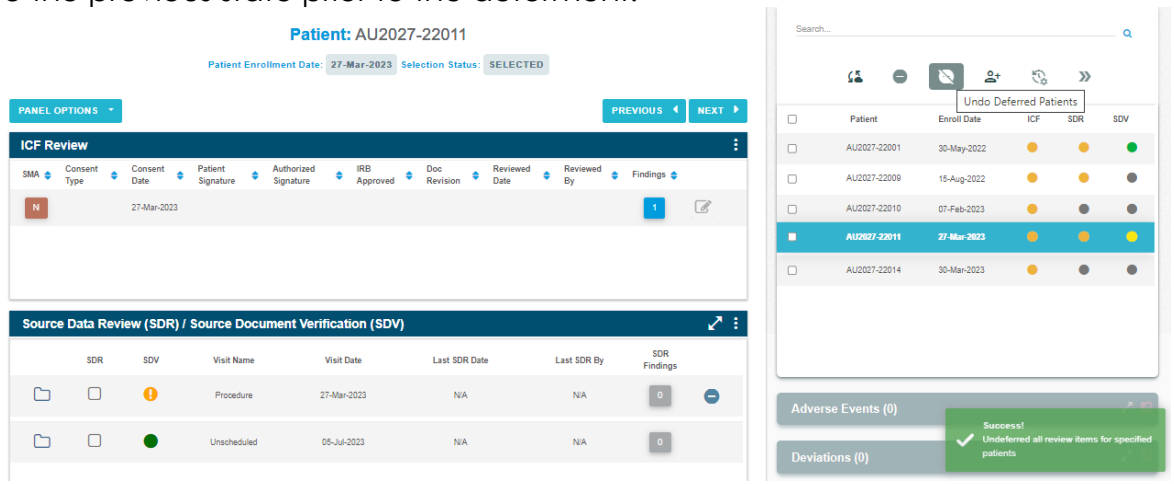

Upon clicking save the group of subjects selected will automatically have all the orange or yellow dots turn to green and deferment icons will be displayed next to each of the patients that were selected for deferment.

To undo a group deferment, simply check the boxes of those patients that were deferred and click the undefer icon.

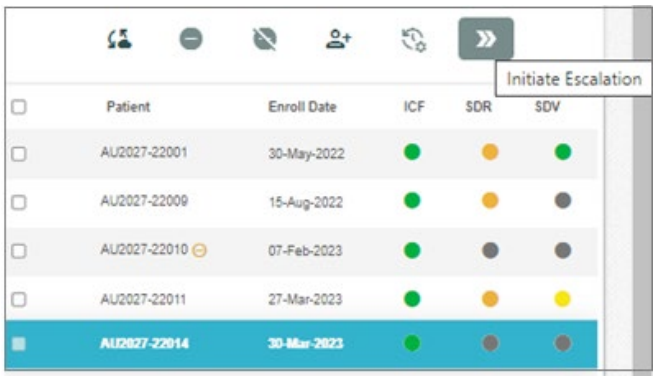

Upon clicking the Undefer option, the patients that were selected will be put back to the previous state prior to the deferment.

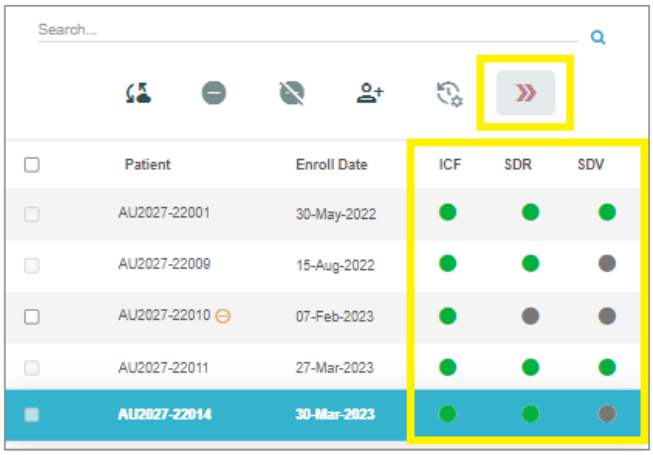

You are complete with your SDV Review once you see that all patients color dots for SDV have been switched to green.

However, the initiate escalation option will not be enabled until all the orange or yellow dots are turned to green or grey for ICF, SDR and SDV.

Escalate and De-Escalation - Patient Review Screen

Once the list of patients has all of the color dots indicated as Green or Grey, the Initiate Escalations button will be enabled for your Level 1 Escalation.

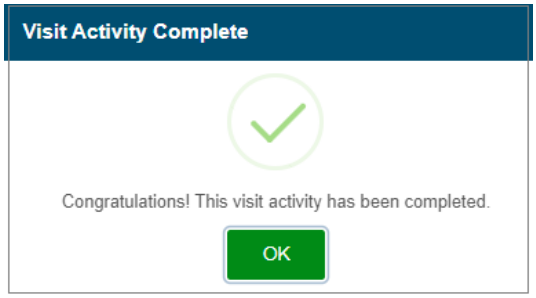

Select the Initiate Escalations button for the algorithm to determine if the number of findings entered has breached the escalation threshold.

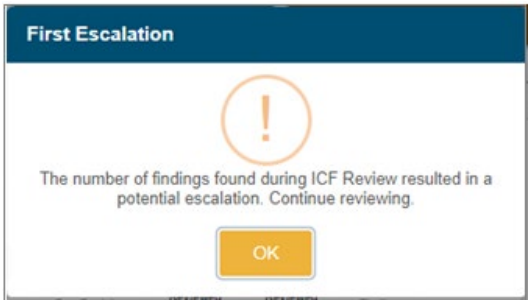

A message will display to confirm that you are ready to initiate escalations.

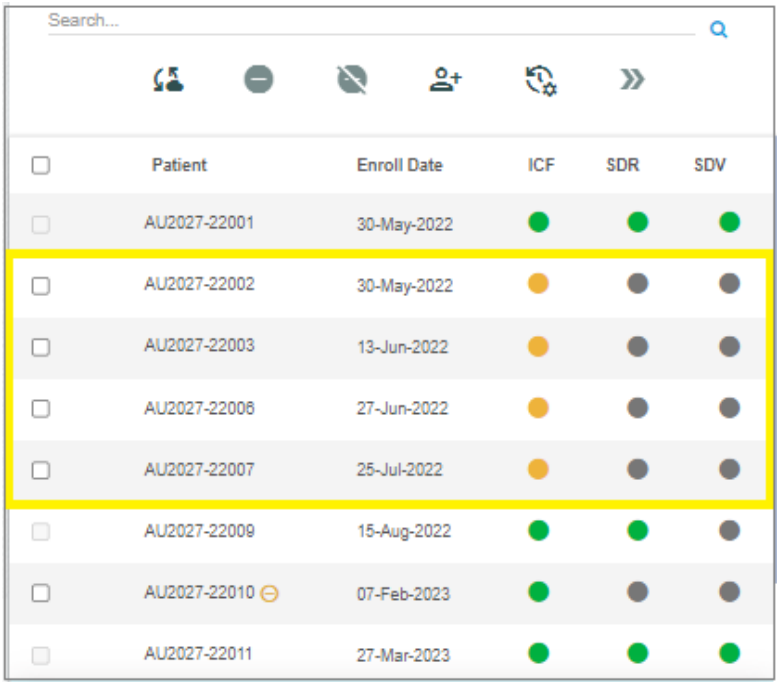

If the escalation threshold is not breached the message will be received that your visit is completed and no further review of reserved for escalation patients will be required.

If the escalation threshold is breached a message will be received that your visit is NOT completed and additional reserved for escalation patients will need to be reviewed.

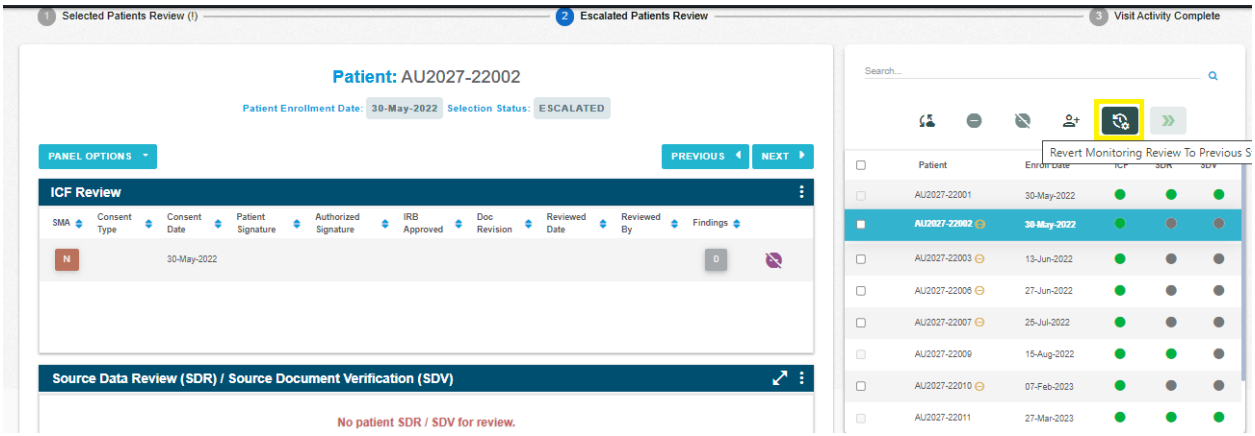

Once you click OK on the message additional reserved for escalation subjects will be brought in for review.

Review the additional reserved for escalation patients based upon what is required in ICF, SDR and SDV.

If after Initiating Escalations you need to de-escalate to make changes to the data at the previous state, select the button that will allow the visit to be put back.

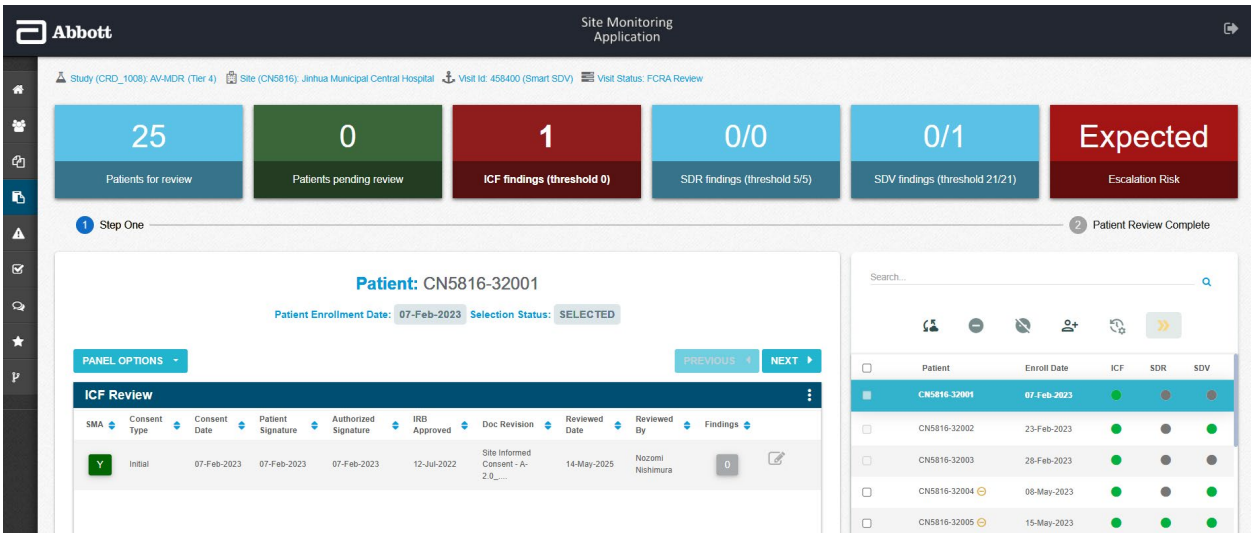

A warning message will appear confirming that you are sure that you want to put this back to it's previous state.

After clicking the "Restore to Prior Review State" the visit will go back to prior to initiating escalations.

**Important Note: The ability to restore to the previous state can occur at any stage of the visit so long as the status of the report is not at Manager Review, Manager Approved or Sent to Site.

The data will then remove all items you did after initiating escalations and allow edits to
occur.

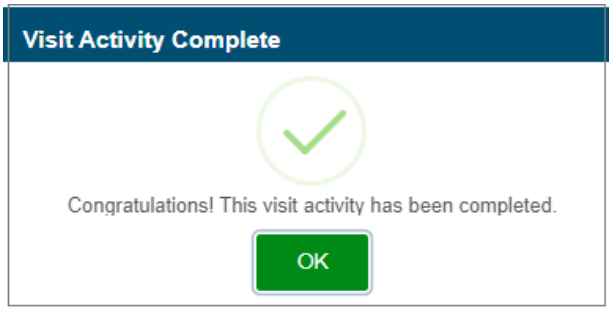

Once edits are made, the Initiate Escalations button can be pressed again.

**Important Note: Data will need to be filled out again for any of the escalated patients so that Initiate Escalations can be pressed again for Level 2 escalations.

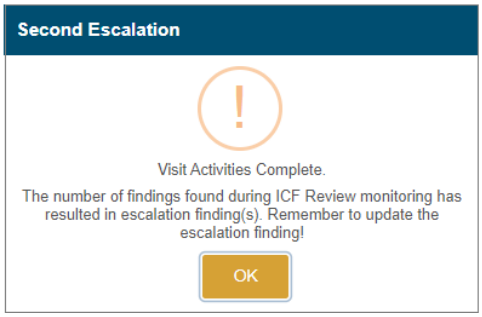

If there is not enough time to complete the reserved for escalation patient review during the visit the defer options are available.

Once all of the reserved for escalation patients have been marked as completed/reviewed indicated with a green or grey dot, initiate escalations button will be enabled again for a Level 2 Escalation.

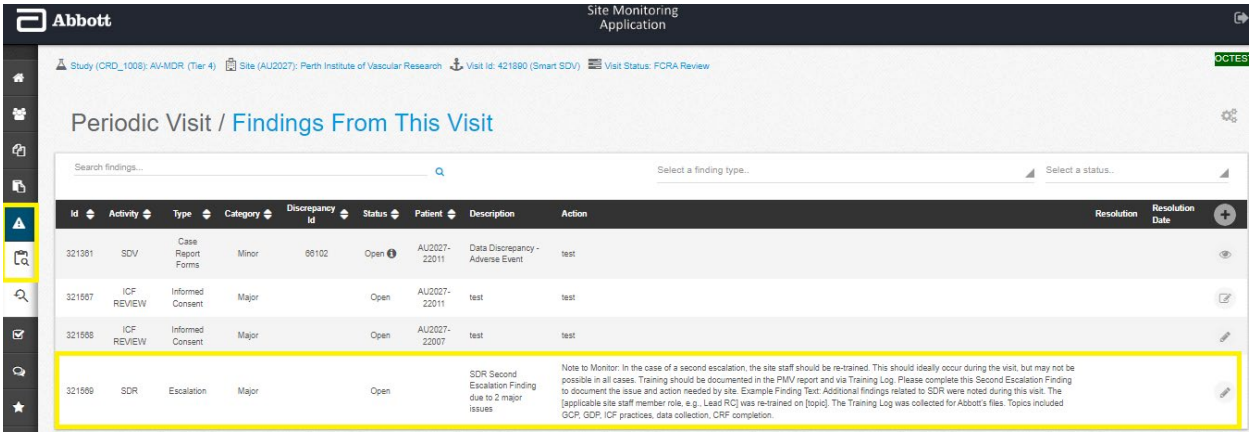

After pressing initiate escalations for Level 2 escalation, if the level 2 escalations were not breached you will receive a message indicating no further action is required and your visit is completed.

If the number of findings entered still breach the escalation threshold, after pressing initiate escalations for Level 2 escalation, a message will be received indicating that an Escalation Finding has been created and that this finding needs to be updated with the details.

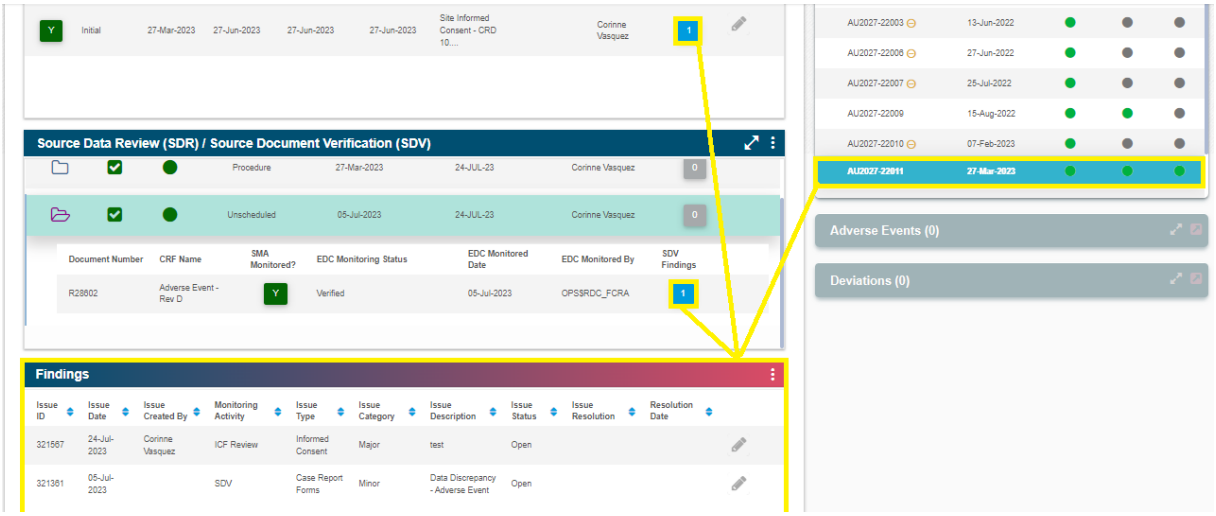

To edit the second escalation finding navigate to the Findings menu.

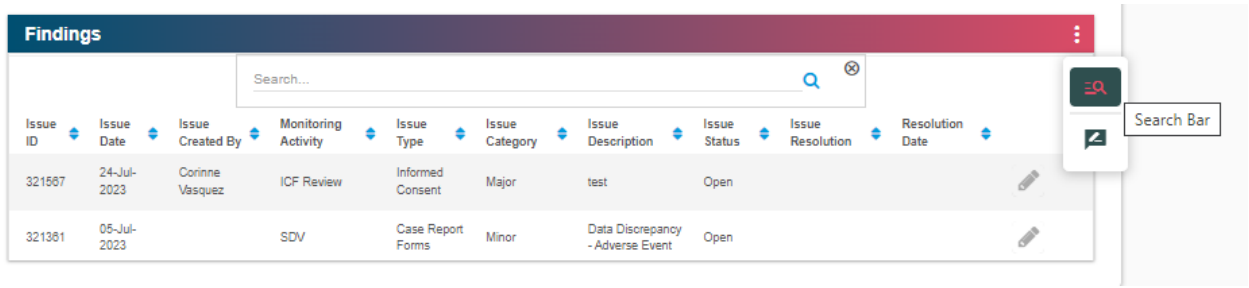

Findings

Within the Patient Review screen there is a findings section that will store the ICF Review, SDR and SDV findings that were created for each patient. In this view you can only review findings patient-by-patient.

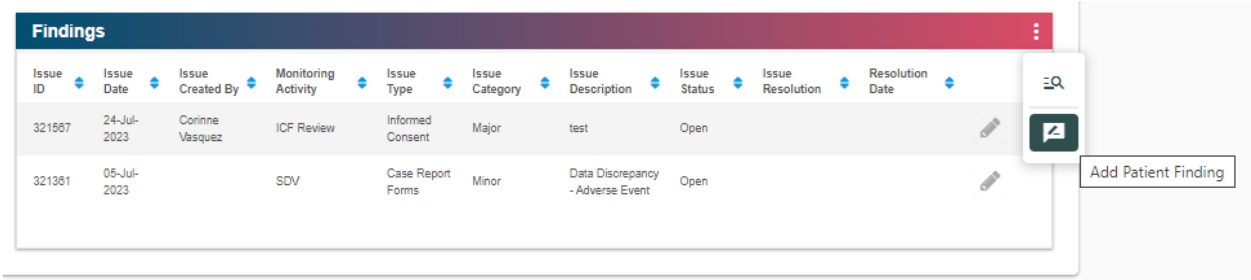

Within the findings section held in the Patient Review Menu the following features are available.

Search for a finding within this listing using the ellipsis.

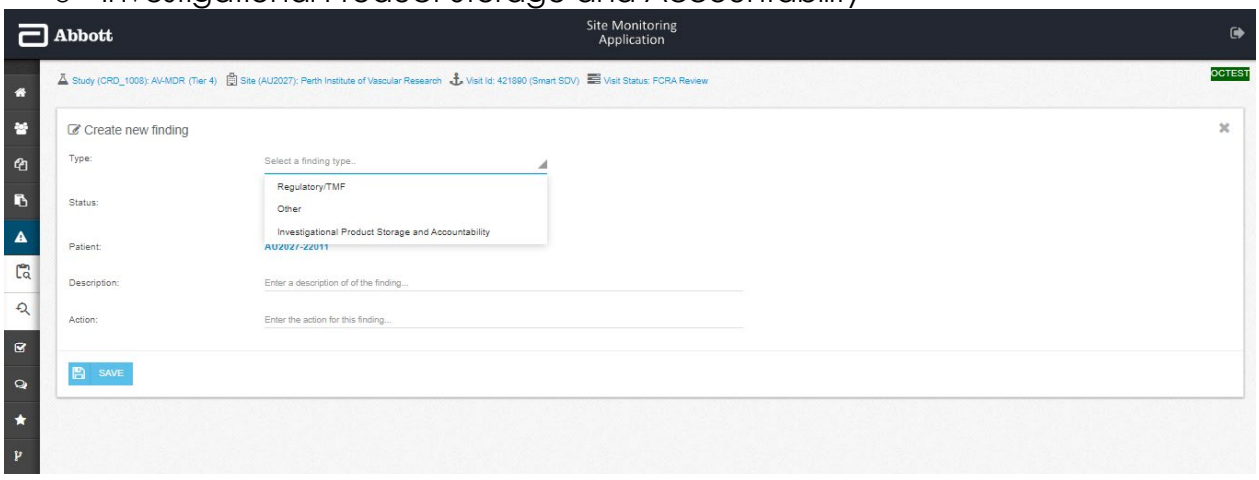

Add a patient finding outside of the ICF, SDR and SDV sections by using the ellipsis.

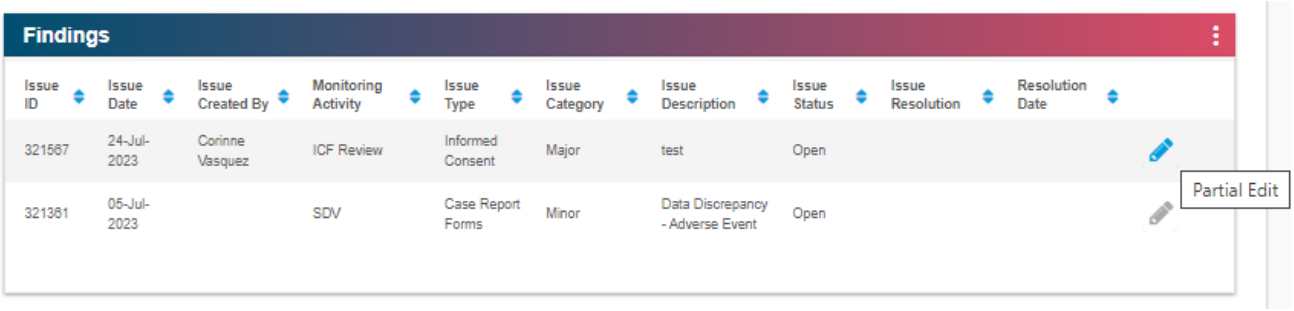

Selecting this option will take you to the findings screen and will only allow you to add the following finding types:

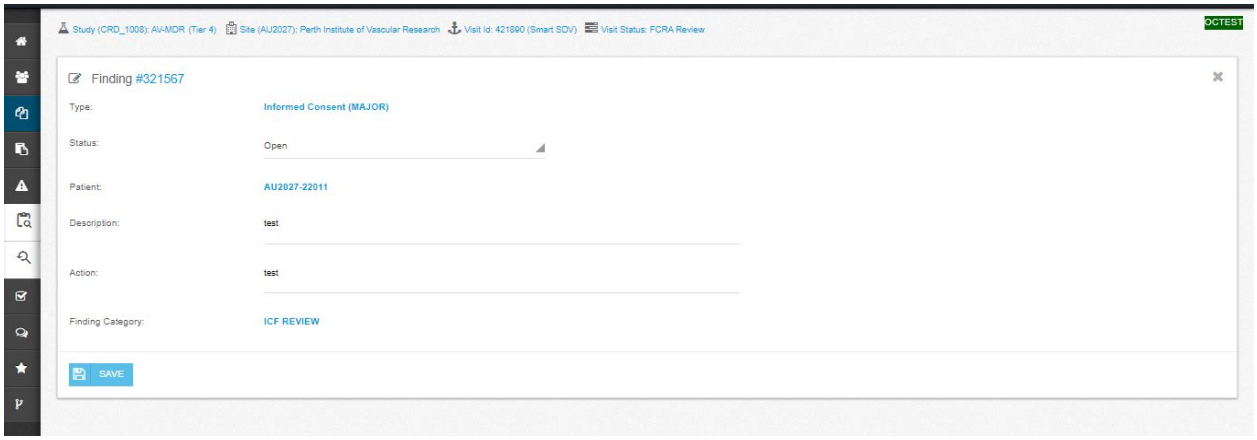

- Regulatory/TMF
- Other
- Investigational Product Storage and Accountability

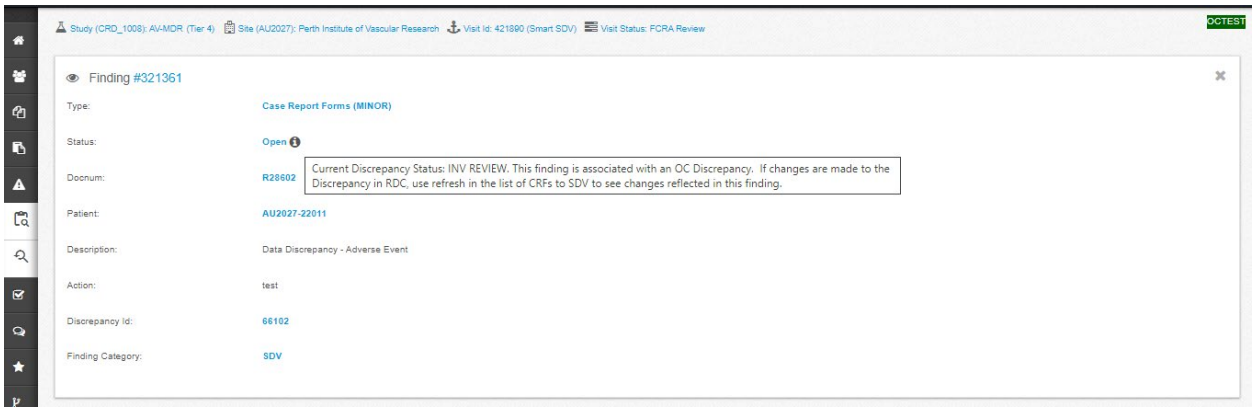

The ability to edit your existing findings is also available by clicking the pencil icon next to each finding.

After clicking the edit option, the finding details screen will be shown and will allow edits as applicable.

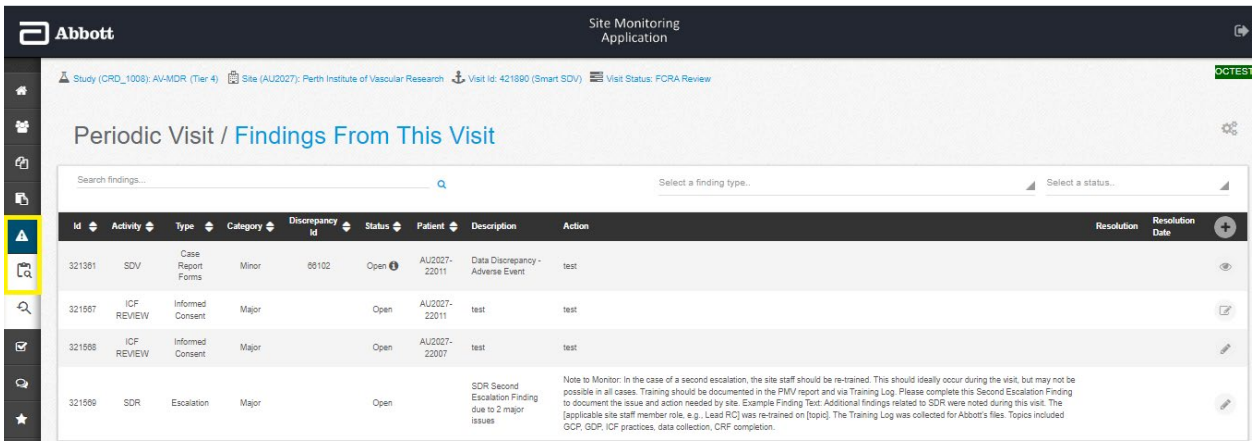

**Important Note: For CRF findings with an associated RDC Discrepancy, edits to the finding can only occur in RDC. Utilize the refresh button to pull in the updated statuses and details or navigate to the Findings Menu to click the Gears icon and refresh.

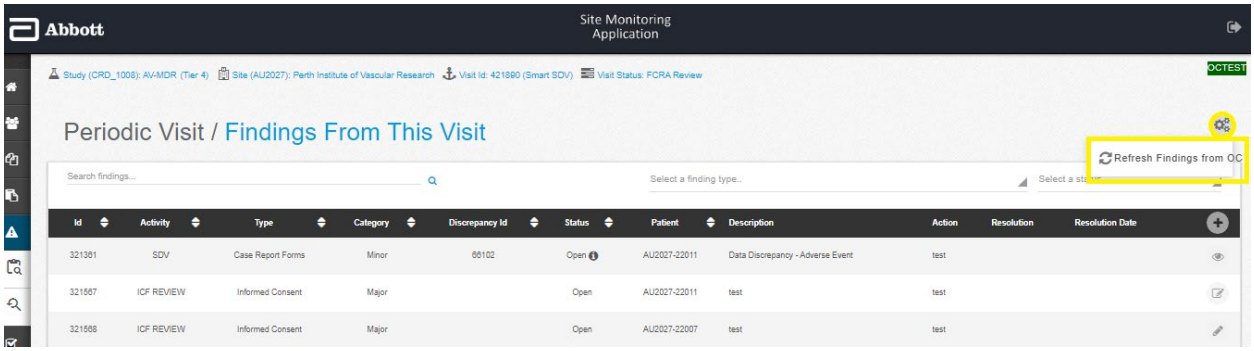

Any findings created within the patient review screen will automatically integrate into this section and vice versa.

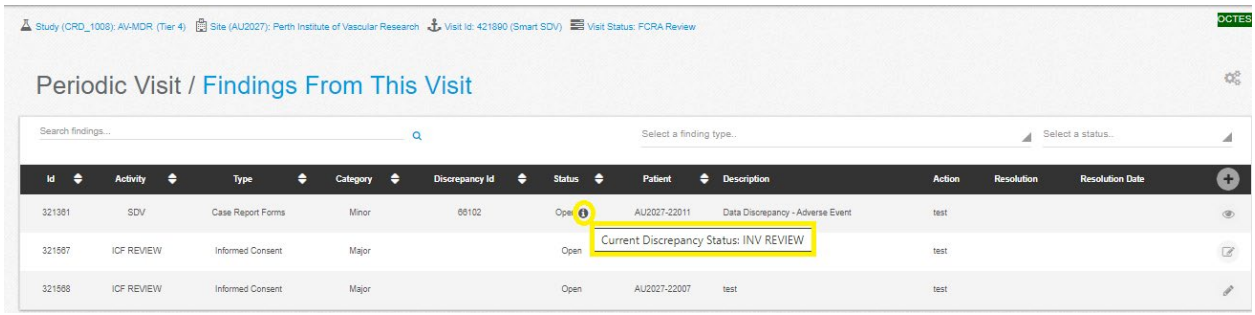

To review all findings in one screen for every patient, navigate to the Findings Menu.

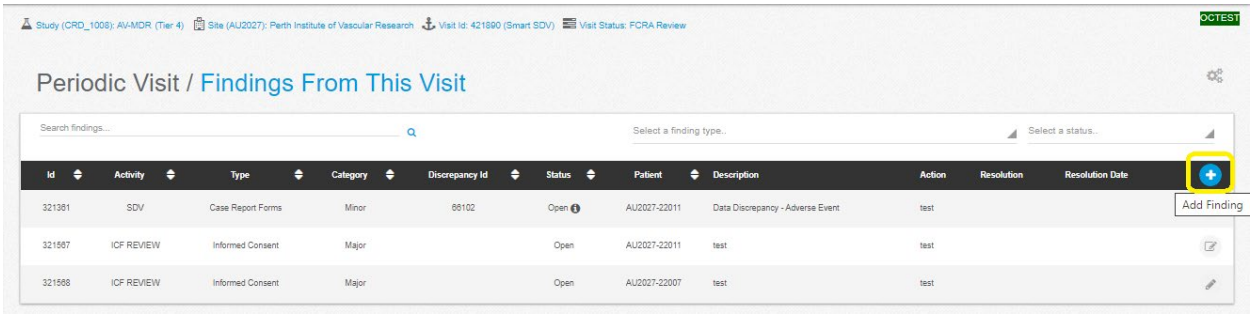

If any findings associated with an OC Discrepancy in RDC need to have the status refreshed to display the resolution details, go to the gears icon to Refresh.

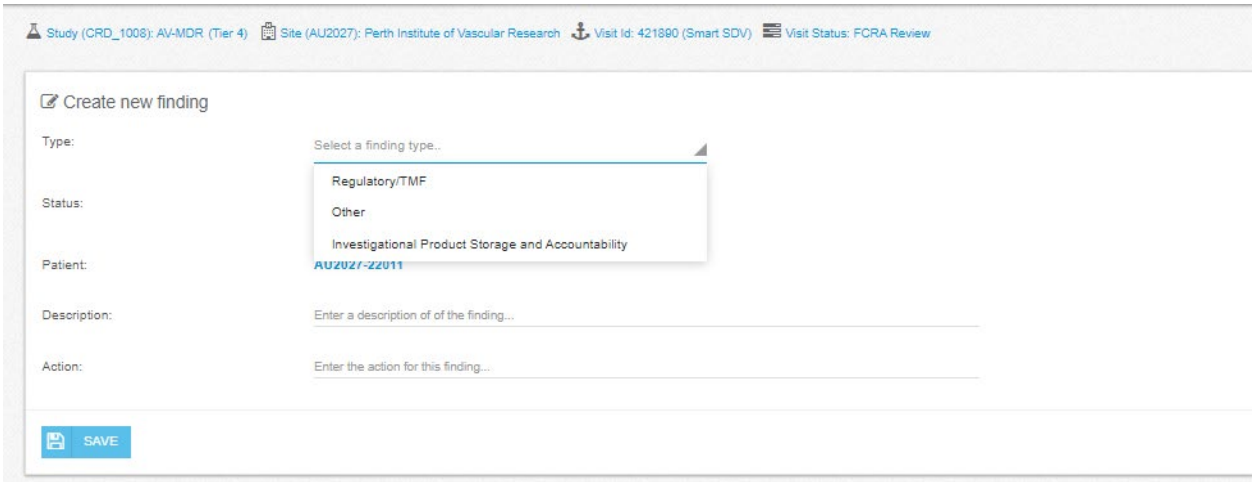

Hover over the information icon in this screen for those Findings that are associated with an OC Discrepancy. This will tell you if this discrepancy needs to still be resolved.

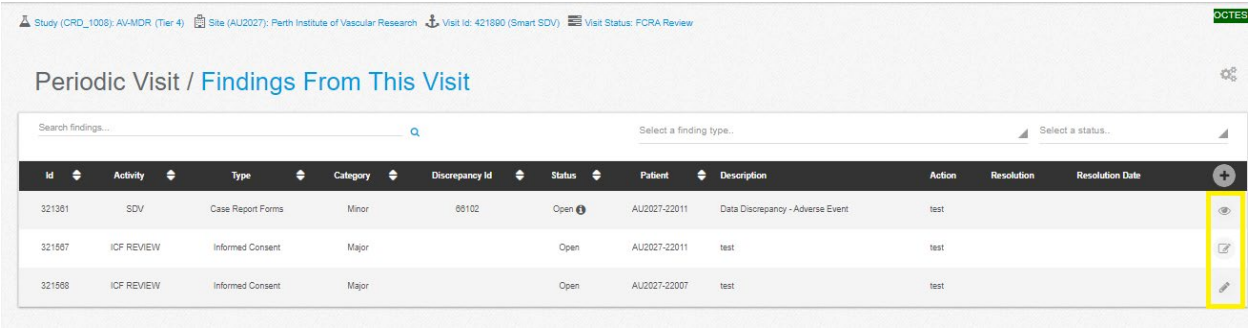

To add any additional findings outside of the ICF, SDR or SDV sections click the plus icon.

Utilize the different icons next to each finding to view, edit or partially edit the details of the finding.

Completing the Periodic Monitoring Visit Report

The periodic monitoring visit report consists of 10 menu options, not all 10 menu options will be applicable for the Site Initiation and Closeout Visits. The menu option titles for Periodic Monitoring Visits and details for completion are noted in the following order that they appear in the application from top to bottom:

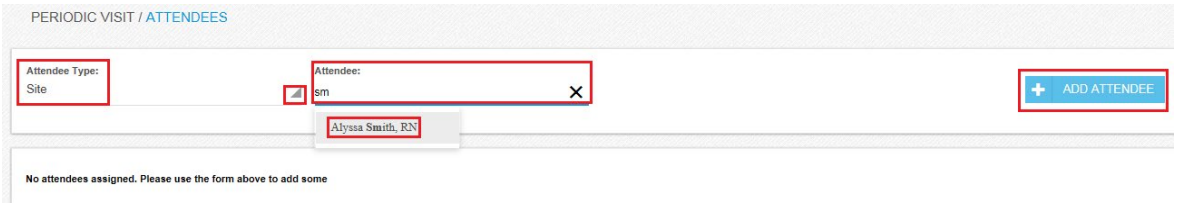

"Home" – The Home section will provide you the fixed details of the Site Monitoring Visit details along with a summary, if applicable, containing the number of Enrolled patients, Protocol Deviations, Adverse Events, Withdrawals (excluding deaths), Deaths that have been entered in Oracle Clinical for the study/site. This will also pull the IRB Expiration Date that is present in Study Organizer.

"Summary" – Only visible for Periodic and Closeout Monitoring visits. These fields dynamically populate from the database. The user can click the 'refresh icon' to gather any newer information from the database. Also, the information can be entered manually if further update or correction is needed by clicking on the 'edit icon' and subsequently saving.

"Attendees" – The Attendees menu allows for Site and/or Abbott Attendees to be added. This will list all personnel who were a part of the Monitoring Visit that need to be noted on the report. This is available for all Monitoring Visit Types and there is no limit on how many attendees can be added.

To add an attendee you first have to select the Attendee Type (Site or Abbott) and then in the search box under Attendee you can start typing to locate the attendee in the drop-down list. Once you locate the attendee click on the name and click the Add Attendee button to add them to the list.

NOTE: Site Attendees will only pull names of site contacts at are currently linked to the study/site in Study Organizer with a contact status of Active or Pending. Inactive contacts cannot be added to the list and will need to contact the FCE or In house Study Team if this is incorrect and needs to change.

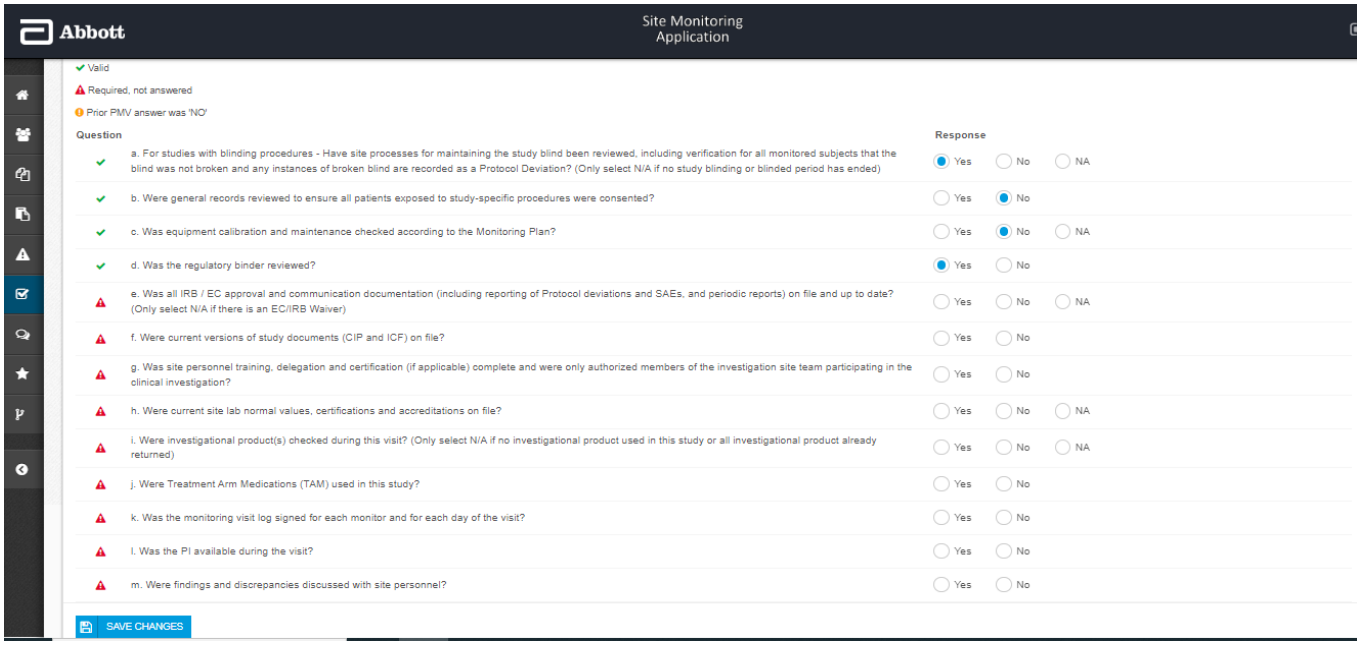

"Checklist Items" – The Checklist Items menu displays pertinent and mandatory questions that need to be asked while conducting the monitoring visit. These questions will be displayed for all Monitoring Visit Types however they will be dynamically pulled based on the type of monitoring visit that is being conducted. The checklist item questions will be different for Site Initiation, Periodic and Close-out Visits. Simply click the correct answer for each question.

NOTE: Depending on the answer to a question may cause other questions to hide or show depending.

If certain questions were answered No in the previous PMV there will be a new indicator of this within the checklist items.

To save the answers temporarily click the "Save Changes" button.

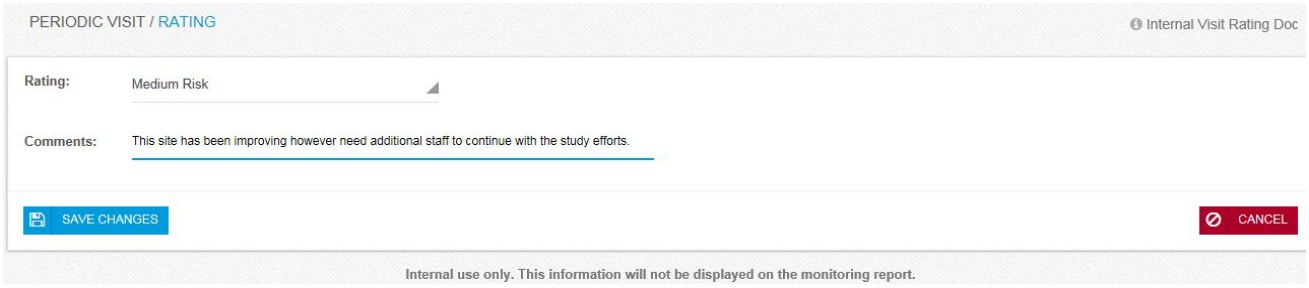

NOTE: The report will not be able to be routed for Manager Review until all these questions have been answered. If any are left unanswered an alert will be provided to prompt answering these questions completely.

"Comments" – In this section additional visit related comments can be added. Comments that were entered when scheduling the periodic monitoring visit will NOT appear in this section. Comments entered in this section will appear on the PDF periodic monitoring visit report. There is the ability to format these comments using the toolbar icons at the top.

"Internal Visit Rating" – This is an internal section and will NOT display on the PDF output or Monitoring Visit Letter. This internal section is mandatory and needs to be completed for each Periodic Monitoring Visit (this is not applicable for Site Initiation or Close-out visits). Within this section there will be an option to provide a rating of the sites' performance based on the FCRA's subjective opinion and some specific guidelines. A document to assist with this rating is provided in the upper right-hand corner of this screen.

"Rating" – Provide the "At Risk" rating for the site that is being monitored the selections here are 'Low Risk', 'Medium Risk' and 'High Risk'. Low risk indicating that the site is doing very good and has little to no issues to report. This risk score will carry over to the Risk Based Monitoring application and will be reviewed when a study/site is being assessed for a risk based monitoring activity.

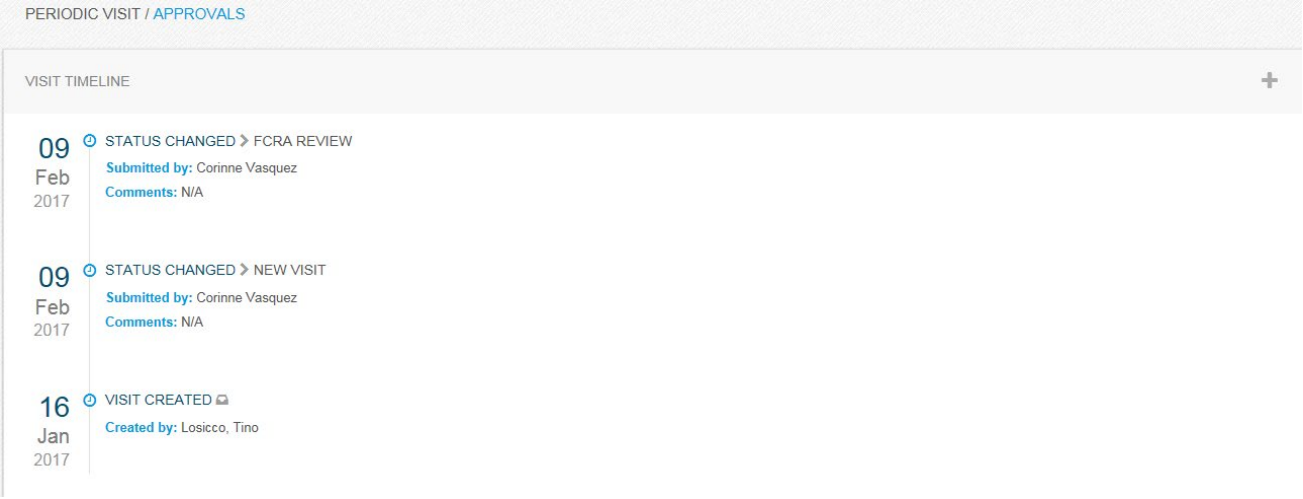

"Comments" – Provide a detailed explanation as to why the associated 'At Risk' rating was selected. These details will carry over to the Risk Based Monitoring application and will be reviewed when a study/site is being assessed for a risk-based monitoring activity.

Periodic Monitoring Visit Report Status

The status of a Periodic Monitoring Report can be set by clicking on the 'Approvals' menu. A report status details screen providing a listing of the different statuses that

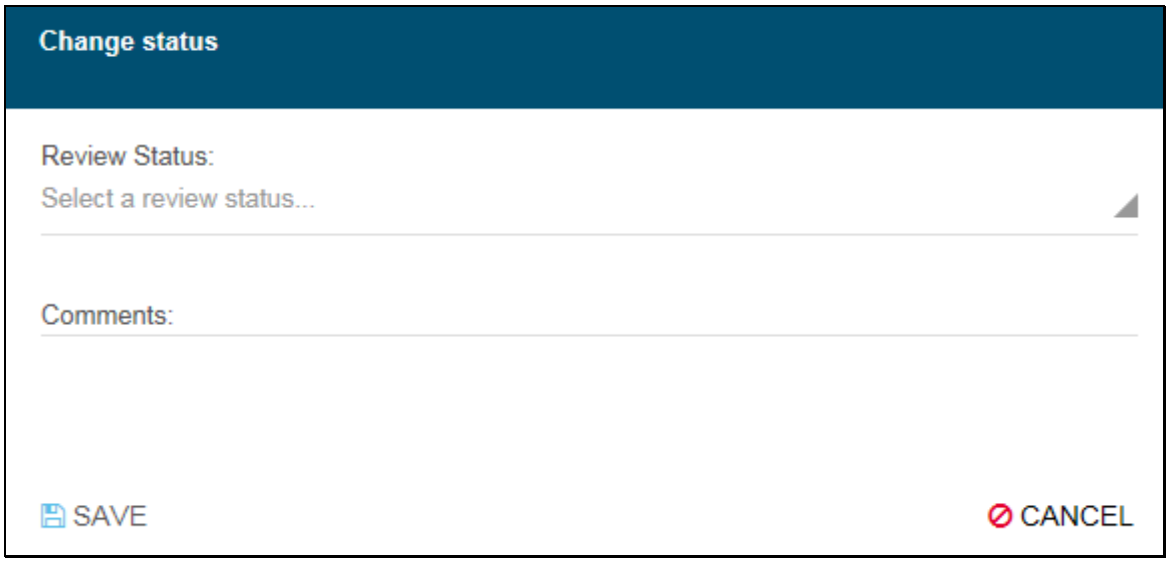

have occurred for this monitoring visit/report along with the date that this status occurred. Once the routing status has been updated and saved, an e-mail notification is sent to appropriate personnel informing them of the Monitoring Visit report status change. To change the routing status, click on the 'Add icon' + at the top right-hand corner of the screen.

NOTE: At this point if any items need to be completed that were missed proper error messages will display indicating that "You cannot proceed forward until you correct the following errors: …"

"Review Status" – When the user selects a review status and clicks the "Save" button, this automatically generates an email notification with SMA link through Microsoft Outlook to the user and other applicable Abbott personnel. There are five status levels that the Periodic Monitoring Visit report can be set to using the pull-down list and are noted as the following.

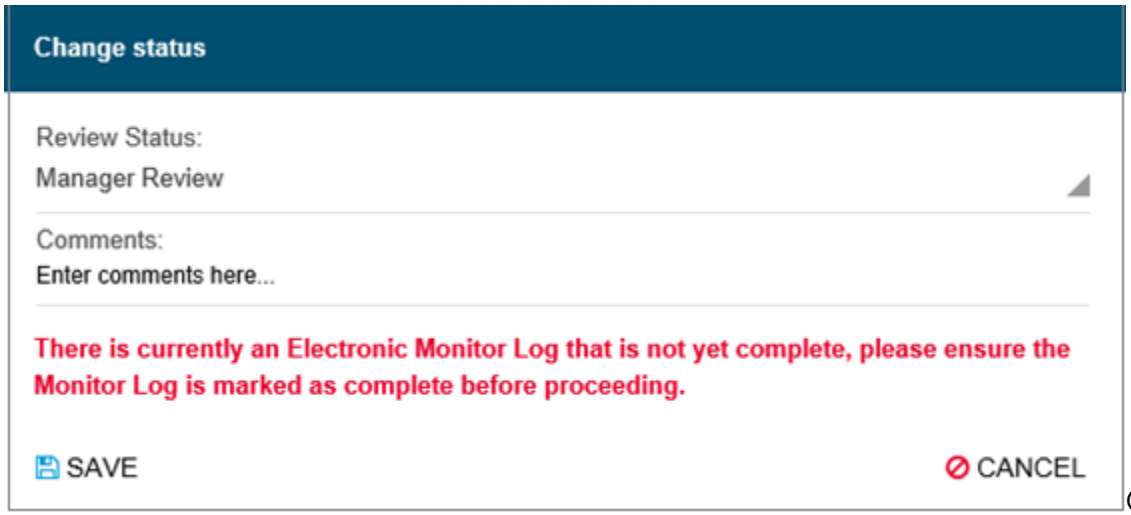

"Comments" – Is the designated entry area for comments as needed.

"FCRA Review"- This status can be set at any time during process of report completion and management review by both the monitor and the manager reviewing the report.

"Manager Review"- This status should be selected by the monitor when entering information into the periodic monitoring report is completed and is ready for management review. Blocking will occur in this screen if the study/site has a Monitor Log – Electronic mandatory requirement in Study Organizer and the monitor log status is at "Draft" or "Ready for Monitor" status.

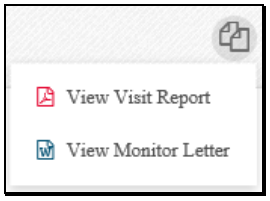

"Manager Approved"- This status can only be selected by the Manager of Clinical Monitoring reviewing the report to indicate that the report has been approved and is ready to be sent to the site. Blocking will occur in this screen if the study/site has a Monitor Log – Electronic mandatory requirement in Study Organizer and the monitor log status is at "Draft" or "Ready for Monitor" status.

Once the status is changed to Manager Approved it will also remove the DRAFT watermark from the PDF Visit Report and now the Monitor Letter will be accessible.

NOTE: To view either the PDF output or Monitor Letter go to the Home Menu 

and click on the 'Documents icon"  in the upper right corner of the screen.

"Sent to Site"- The monitor selects this status when the letter and report are already sent to the site. Blocking will occur in this screen if the study/site has a Monitor Log –

Electronic mandatory requirement in Study Organizer and the monitor log status is anything other than "Complete" status.

The Monitor is required to select a follow-up letter for upload if the study is setup to use Study Organizer for filing.

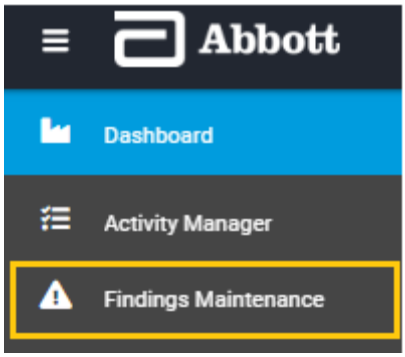

Once "Sent to Site" status is saved, the letter and report as well as the completed monitor log (as applicable) will be autogenerated and get uploaded to the Study Organizer application for in-house review and approval.

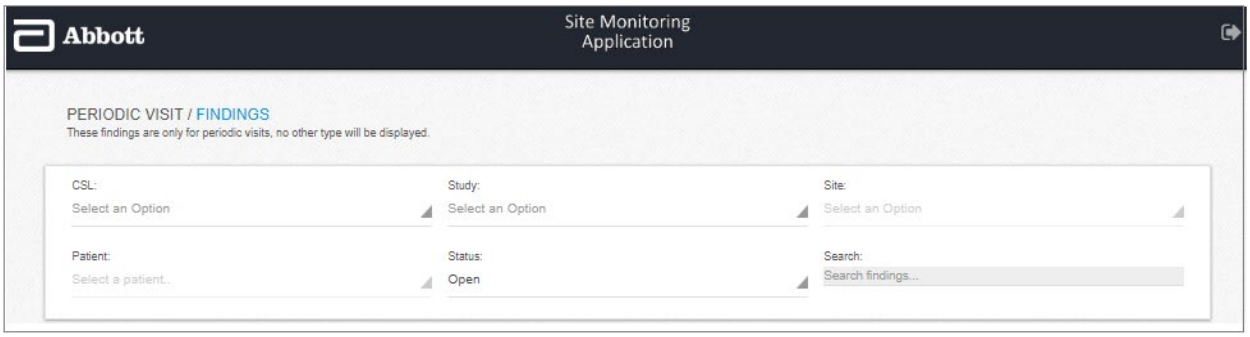

NOTE: The View Visit Report and View Monitor Letter options will still be available if the report is at this status.

Findings Maintenance

The Findings Maintenance module provides the ability to work with your open findings from in between scheduling your next periodic monitoring visit.

To work with findings through the Findings Maintenance module simply search for findings utilizing the options available. NOTE: Search criteria must be in place first before findings will display. These findings are only for periodic visits, no other type will be displayed.

"FCRA" – Search for findings associated to the primary assigned FCRA, all findings associated with a primary FCRA's visit will be shown. NOTE: This will include any findings that the monitor2 created during a visit.

"Study" – Search for findings associated to a study, once study is selected the site drop down will be enabled to select. NOTE: System allows searching for open findings by study only, do not have to select FCRA to search by study.

"Site" – This search option is only available once a 'Study' is selected, once study is selected the drop down will be enabled to search for findings associated to a study and site.

"Patient" – This search option is only available once a 'Site' is selected, once a site is selected the drop down will be enabled to search for findings associated to a study, site, and patient.

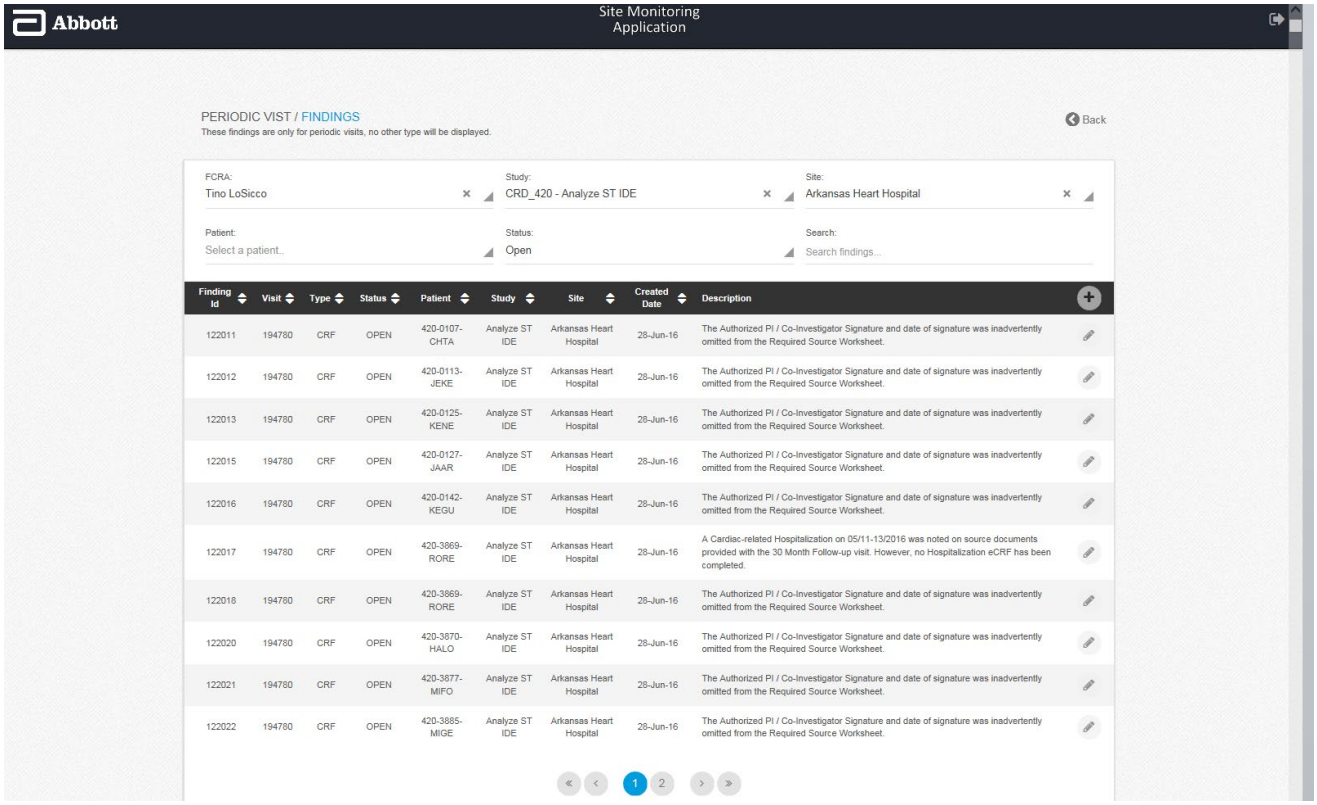

"Status" – Search for findings that are at the status of 'Open' or 'Closed'. This option is available to select at any time. Searching for 'Open' findings will show all findings that remained open and have not been closed out. Searching for 'Closed' findings will show all findings that have been closed out.

NOTE: The display of closed findings will only allow view if they connected with a previous visit. No edit of closed findings that connected with a previous visit will be allowed.

"Search" – The open 'Search' field is only available once a 'Site' is selected and is only used to search by Finding ID, Visit ID and Type of Finding (AE, REG, etc.). This open search field will not allow search by Created Date or Description. Simply start typing into the open search field to dwindle down the list that is shown.

All columns that are shown in the table, with the exception of the finding description, are sortable by ascending or descending order by simply clicking on the column header.

NOTE: Only 10 findings will display on the view screen therefore if there are more than 10 findings to display a page number will show at the bottom of the screen to go to the next 10 and so on.

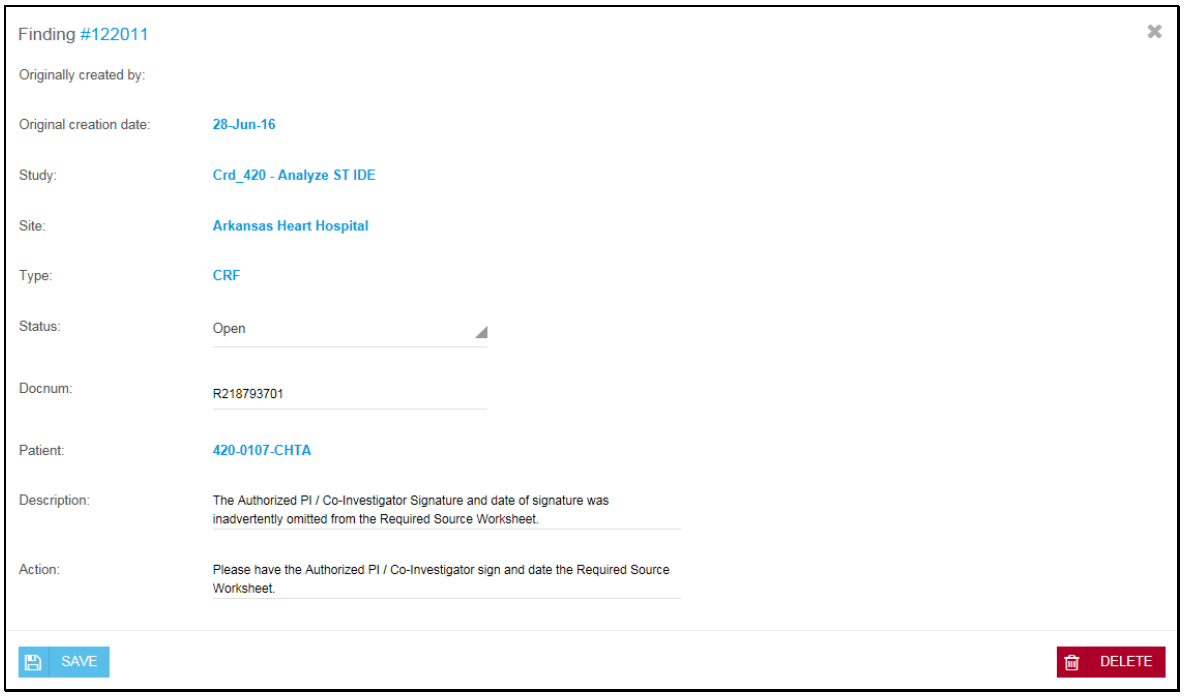

Edit Open Findings Between Visits

Once open findings are located through the specified search there will be an option to edit the open finding.

To edit the open finding simply click on the 'Edit icon' next to the finding. Upon selecting the edit icon, a new details screen will be shown that will allow for edits to the Descriptions of the finding and the Action of the finding as well as the ability to change the status from 'Open' to 'Close'.

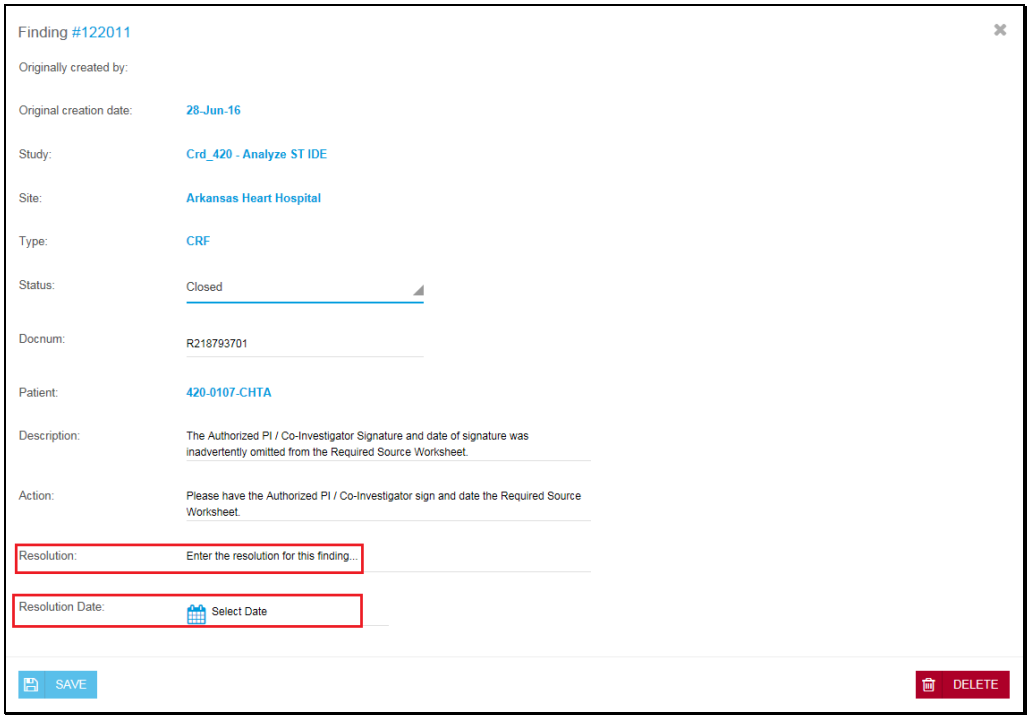

NOTE: The save button will remain disabled until edits are made.

To Exit this screen without saving changes simply click on the close icon ✖ button. This will take you back to your previous search screen.

Upon changing the status from 'Open' to 'Close' two fields will show. 'Resolution' and 'Resolution Date' will be shown and will be required to continue with saving the changes. Upon saving these changes the status of the finding will be marked as closed within the table and will automatically be brought into the next scheduled periodic monitoring visit upon import.

NOTE: If there is already a current periodic monitoring visit at FCRA Review status for the selected Study/Site/ Finding a message will show indicating that this finding will automatically be associated with this visit. When going into the visit this finding will automatically show in the findings from previous visits section at the appropriate closed status.

Create New Findings Between Visits

Once findings are located through the specified search there will be an option to add a new finding within this screen.

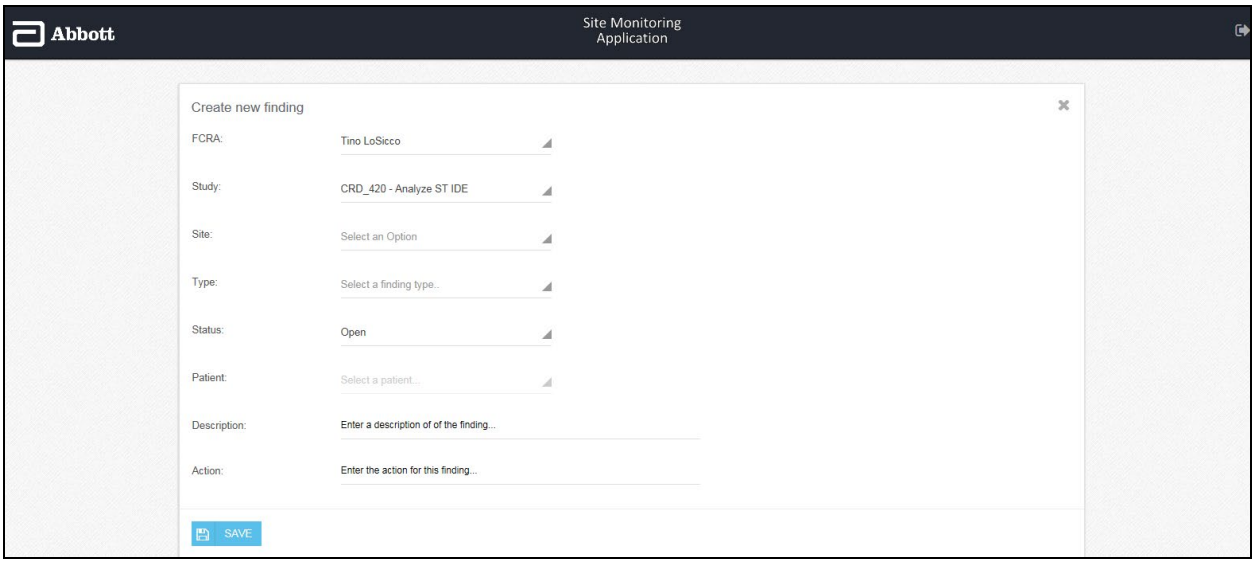

To add a New Finding, simply click on the 'Add icon'  within the header of the table on the right-hand side. Upon selecting the add icon a new details screen will be shown that will allow for details to be provided for a new finding. For every new finding a Study, Site, Description and Action must be present. Additionally, depending on the type of finding selected certain fields will be hidden or shown and required. Lastly, depending on the status of the finding will determine if additional resolution details are needed.

NOTE: Search criteria selected will automatically populate in the details screen but can be changed if needed. The save button will be disabled until all required fields are populated.

Upon saving the New Finding the finding will now be shown within the table and will automatically be brought into the next scheduled periodic monitoring visit upon import.

NOTE: If there is already a current periodic monitoring visit at FCRA Review status for the selected Study/Site/ Finding a message will show indicating that this new finding will automatically be associated with this visit. When going into the visit this new finding will automatically show in the findings from previous visits section at the appropriate status.

To Exit this screen without saving changes simply click on the close icon ✖ button. This will take you back to your previous search screen.

Monitoring Reports – CDO Gateway

Monitoring Reports available within the CDO Gateway > Reports > Monitoring Menu

- **Monitoring Visit Status Report** (use the paperclip icon for additional information)
- **Monitoring Findings Report** (use the paperclip icon for additional information)
- **SMA Scheduled Activities Report Suite** (use the paperclip icon for additional information)
- **CRF and ICF Monitoring Status Report Suite** (use the paperclip icon for additional information)
- **Patient Listing for Smart SDV and Risk Based Monitoring Report** (use the paperclip icon for additional information)
- **Monitoring Visit Compliance Report** (use the paperclip icon for additional information)
